

# *Are the ills of middle and later life rooted in our early development?*

During the past few years a series of articles, mostly from the Medical Research Council's Environmental Epidemiology Unit at the University of Southampton, has been published in leading medical journals. They set out the evidence that certain adult diseases, including coronary heart disease, stroke and diabetes originate in impaired development during fetal life and infancy. Because of the obvious implications for prevention of some of the commonest diseases in Western society, they have attracted international attention. In this book, Professor David Barker, Director of the Unit, has selected 31 articles that he considers seminal and a comprehensive guide to the development of this important topic. Professor Roger Robinson's introduction summarises and interprets the evidence for non-epidemiologists.

The first chapters describe the origins of the hypothesis in geographical studies in England and Wales. These are followed by a series of studies of men and women in middle and late life whose early growth was recorded at the time. In those who have died, cause of death can be related to early growth. Examination of the living has allowed blood pressure, blood lipid and insulin concentrations, and other measurements to be related to different patterns of early growth. Together, the findings show that early development affects the risk of coronary heart disease, stroke, obstructive lung disease and diabetes at least as strongly as obesity, smoking and other aspects of adult life style.

*Fetal and Infant Origins of Adult Disease* brings together in one volume a body of work that cannot be ignored

Hardback • Illustrations • Tables • 368 pages • ISBN 0-7279-0743-3  
UK £24.95; Abroad £30.00 (BMA members £22.95 or £28.00) including postage, by air abroad

## ORDER FORM

British Medical Journal, PO Box 295, London WC1H 9TE.

Please send me \_\_\_\_\_ copy/ies of FETAL AND INFANT ORIGINS OF ADULT DISEASE

Please send me a book catalogue

Signature \_\_\_\_\_  
BMJ books are also available from major booksellers or the BMJ bookshop in BMA House. Book tokens accepted (UK only).

# **What do we really know about editorial peer review in scientific publication?**

## **Something, but not enough.**

- We know that peer review is widely used, but how widely?
- We know that peer review suffers from bias and conflicts of interest, but what biases and conflicts really matter? And how do we get rid of them?
- We fear that peer review suppresses innovation, but to what extent?
- We know that peer review has existed for years without scientific proof of its worth, but will it hold up under the same rigor and scrutiny we demand of science itself?

To answer many of these questions, editors, scientists, and scholars will gather to present and discuss research findings at the Second International Congress on Peer Review in Biomedical Publication, September 9-11, 1993, at the Fairmont Hotel in Chicago, Illinois.

## **The Second International Congress on Peer Review in Biomedical Publication**

**September 9-11, 1993 Chicago, Illinois**

### **Topics will include**

- The mechanisms of peer review and editorial decision making in different journals, including blind review
- The relationships between authors, editors, and reviewers, and how each is educated, selected, and evaluated
- Allocation of responsibility for published material and the meaning of authorship
- Quality assurance and standards for reviewers and editors
- Breakdowns, weaknesses, and biases in the system
- Conflicts of interests
- Fraud and scientific misconduct
- Peer review of grant proposals

The subject of the Congress is biomedical publication, but scholars in other disciplines are urged to participate, so that we may examine editorial peer review in the context of the overall scientific enterprise.
