

BLOOD, SWEAT, AND CHEERS

Sir Ian Fraser

Former president both of the Royal College of Surgeons of Ireland and of the British Medical Association, Sir Ian Fraser is eminent in his profession, but his book is not about being eminent, it is about life and its pleasures and pains, told with zest and humour and delightfully pictured in Ghislaine Howard's illustrations.

A NATURAL HISTORY OF EVERYDAY LIFE – A BIOGRAPHICAL GUIDE FOR WOULD-BE DOCTORS OF SOCIETY

Lord Taylor of Harlow

As doctor, politician, and administrator the late Lord Taylor was a key figure in the formative years of some varied institutions: the National Health Service, Harlow New Town, and the Memorial University of Newfoundland. These lively memoirs detail his career and his views on the origins of some of society's ills – and their cures

What's wrong with medical education?

Many medical graduates are unprepared for the realities of being a doctor. After five years of absorbing factual information, their creative thinking and problem solving skills are poor. Something is wrong with the way students are being taught.

In *Medical Education* Stella Lowry has put together the current views from the

profession, the GMC's recent review, and a national consensus inquiry by the King's fund. She examines issues such as:

- Selecting and assessing students
- Changing curricula
- Improving the quality of teaching
- Reorganising the preregistration year

The arguments and proposals for improvement are explained clearly, enabling all those involved in teaching medicine – virtually all doctors – to contribute to the debates. The book also provides a valuable insight, for teachers and students alike, into the way forward for medical education.

Are the ills of middle and later life rooted in our early development?

During the past few years a series of articles, mostly from the Medical Research Council's Environmental Epidemiology Unit at the University of Southampton, has been published in leading medical journals. They set out the evidence that certain adult diseases, including coronary heart disease, stroke and diabetes originate in impaired development during fetal life and infancy. Because of the obvious implications for prevention of some of the commonest diseases in Western society, they have attracted international attention. In this book, Professor David Barker, Director of the Unit, has selected 31 articles that he considers seminal and a comprehensive guide to the development of this important topic. Professor Roger Robinson's introduction summarizes and interprets the evidence for non-epidemiologists.

The first chapters describe the origins of the hypothesis in geographical studies in England and Wales. These are followed by a series of studies of men and women in middle and late life whose early growth was recorded at the time. In those who have died, cause of death can be related to early growth. Examination of the living has allowed blood pressure, blood lipid and insulin concentrations, and other measurements to be related to different patterns of early growth. Together, the findings show that early development affects the risk of coronary heart disease, stroke, obstructive lung disease and diabetes at least as strongly as obesity, smoking and other aspects of adult life style.

Fetal and Infant Origins of Adult Disease brings together in one volume a body of work that cannot be ignored

Advanced Paediatric Life Support

The Practical Approach

THE PRACTICAL GUIDE TO THE EMERGENCY CARE OF CHILDREN

Advanced Paediatric Life Support: The Practical Approach gives detailed, easy to follow directions on management during the crucial first hour of care in all common emergencies in children. The book is divided into sections on:

- Basic and advanced life support
- Management of the seriously ill child
- Management of the seriously injured child
- Practical procedures

Written by paediatricians, paediatric surgeons, specialists in accident and emergency medicine, and anaesthetists, the book is an integral component of the Advanced Paediatric Life Support course, which aims to raise the standard of the emergency care of children. It will help all doctors, nurses, and paramedics to deal confidently with seriously ill and injured children.

What do we really know about editorial peer review in scientific publication?

Something, but not enough.

- We know that peer review is widely used, but how widely?
- We know that peer review suffers from bias and conflicts of interest, but what biases and conflicts really matter? And how do we get rid of them?
- We fear that peer review suppresses innovation, but to what extent?
- We know that peer review has existed for years without scientific proof of its worth, but will it hold up under the same rigor and scrutiny we demand of science itself?

To answer many of these questions, editors, scientists, and scholars will gather to present and discuss research findings at the Second International Congress on Peer Review in Biomedical Publication, September 9-11, 1993, at the Fairmont Hotel in Chicago, Illinois.

The Second International Congress on Peer Review in Biomedical Publication

September 9-11, 1993 Chicago, Illinois

Topics will include

- The mechanisms of peer review and editorial decision making in different journals, including blind review
- The relationships between authors, editors, and reviewers, and how each is educated, selected, and evaluated
- Allocation of responsibility for published material and the meaning of authorship
- Quality assurance and standards for reviewers and editors
- Breakdowns, weaknesses, and biases in the system
- Conflicts of interests
- Fraud and scientific misconduct
- Peer review of grant proposals

The subject of the Congress is biomedical publication, but scholars in other disciplines are urged to participate, so that we may examine editorial peer review in the context of the overall scientific enterprise.
