

Are the ills of middle and later life rooted in our early development?

During the past few years a series of articles, mostly from the Medical Research Council's Environmental Epidemiology Unit at the University of Southampton, has been published in leading medical journals. They set out the evidence that certain adult diseases, including coronary heart disease, stroke and diabetes originate in impaired development during fetal life and infancy. Because of the obvious implications for prevention of some of the commonest diseases in Western society, they have attracted international attention. In this book, Professor David Barker, Director of the Unit, has selected 31 articles that he considers seminal and a comprehensive guide to the development of this important topic. Professor Roger Robinson's introduction summarises and interprets the evidence for non-epidemiologists.

The first chapters describe the origins of the hypothesis in geographical studies in England and Wales. These are followed by a series of studies of men and women in middle and late life whose early growth was recorded at the time. In those who have died, cause of death can be related to early growth. Examination of the living has allowed blood pressure, blood lipid and insulin concentrations, and other measurements to be related to different patterns of early growth. Together, the findings show that early development affects the risk of coronary heart disease, stroke, obstructive lung disease and diabetes at least as strongly as obesity, smoking and other aspects of adult life style.

Fetal and Infant Origins of Adult Disease brings together in one volume a body of work that cannot be ignored

"Value judgments about food are being made all the time—they are nearly always subjective and usually wrong."
A Stewart Truswell, Boden professor of human nutrition at the University of Sydney, separates fact from fallacy in the *ABC of Nutrition*. This fully revised and updated edition offers the general medical reader a refreshingly down to earth review of all aspects of nutrition—from anorexia to obesity, infant feeding to dietary guides for the elderly—and will be invaluable for doctors and other medical professionals wishing to advise patients about their eating habits.

Review of the first edition

"Truswell . . . has written *the* introductory textbook for students of nutrition at any level . . . All physicians, medical students, nurses, nursing students, dieticians, dietician students, and those interested in nutrition education should have a copy of this book."

American Journal of Clinical Nutrition

Second edition March 1992

Paperback • ISBN 0 7279 0315 2 • 120 pages

UK £8.95; Abroad £10.50 (BMA members £8.45 or £10.00)

Healthy women with normal pregnancies need little formal care; those at risk of damage to their own or their baby's health need the best of scientific medicine. The aim of antenatal care is to distinguish between these two groups, giving those who need it the full range of diagnostic and therapeutic measures while avoiding unnecessary intervention in those whose pregnancy proceeds normally. In the *ABC of Antenatal Care* Geoffrey Chamberlain, professor and chairman of the department of obstetrics and gynaecology at St George's Hospital Medical School, London, outlines the practicalities of routine antenatal care and the management of the major medical problems that may arise. Originally published as a series of articles in the *BMJ*, this manual discusses with common sense and humour the background to current practice and indicates how it could be improved in the 1990s.

Chapters include

- Normal antenatal management • Detection and management of congenital abnormalities • Work in pregnancy
- Medical problems in pregnancy • Preterm labour

MANAGING CHILDREN WITH Psychiatric PROBLEMS

Edited by: M Elena Garralda

It's not just child psychiatrists who need to deal with children with behavioural and emotional problems. All doctors who treat children will encounter some who need special understanding and treatment. In *Managing Children With Psychiatric Problems* leading experts describe the main established treatments used in child and adolescent psychiatry and the procedures for liaising with other services such as hospital psychiatric departments and courts. The information is presented clearly and directly, with the minimum of jargon. Each chapter contains a useful summary of key points. Childhood psychiatry is an increasingly important part of training for psychiatric registrars, trainee paediatricians, and general practitioners. This book will help all doctors to identify and manage children with behavioural and emotional problems.

ISBN 0 7279 0788 3

September 1993

UK £14.95 Overseas £17.00 (BMA members £13.95; £16.00)

AVIATION MEDICINE

THIRD EDITION

Richard M Harding, F John Mills

With air travel now a part of everyday life for many people, all doctors need to be well informed on the medical implications of the abnormal environment of flight.

AVIATION MEDICINE is established as the standard guide to medical care and air travel, advising doctors how to decide whether a patient is fit for air travel and how to cope with a medical emergency during flight. It also informs specialists

called on to advise on specific aspects such as fitness of aircrew.

This third edition has been brought fully up to date and expanded to give more information on areas such as cabin air quality and the regulation of air safety. There is also a new chapter on aeromedical transportation.

TOPICS INCLUDE:

- Medical emergencies in the air
- Legal aspects of inflight emergencies
- Fitness to travel by air
- Spaceflight and other forms of flight
- Medical aspects of airline operations

ISBN: 0 7279 0814 6 October 1993 228 pages UK £13.95; Abroad £16.00; (BMA Members £12.95; £15.00)
