Certain things are *basic* . . . The books, for instance. You may not take them down every day, but you *know* them. Sound, fundamental.

You know Aspellin, too. A really effective, economical treatment for rheumatic conditions and muscular trauma—a spirit-based liniment containing Acid Acetylsalicylic to relieve symptomatic pain *rapidly*, and Methyl Salicylate, with Menthol and Camphor, to reduce inflammation and muscle tension.

Rheumatism sufferers can only obtain Aspellin if you prescribe it. Aspellin is *only* obtainable on prescription. Cost: 10½d. per oz.

ASPELLIN—indicated in the treatment of acute rheumatic conditions, sciatica, lumbago, fibrositis, muscular trauma.

A Spencer Support for Visceroptosis

RELIEVES SYMPTOMS,

PROMOTES A SENSE OF WELL-BEING

It has been found that practically every ptotic patient experienced relief of symptoms, increased energy and sense of well-being following application of proper support.

The doctor can rely upon Spencer for *proper support* because each Spencer is individually designed, cut, and made for each patient from detailed measurements and a complete description of that patient's body and posture.

With a Spencer, the co-relation of abdominal and back support induces correct posture, modifies an unfavourable tilt. Ptosed organs are lifted to normal position to improve circulation. Better digestion, elimination, respiration often result.

Spencer Support closed. The concealed inner abdominal section is adjustable at several different points from the outside of the support.

(Right) Spencer Support shown open revealing inner abdominal section.

the new 100ml pack of DQV-K

Now—for the first time—you can prescribe 100 ml of penicillin V-K syrup in a single bottle of DQV-K. Normally this will be enough for five days treatment—the usual course for most penicillin-sensitive infections—and with just one bottle this course is more likely to be completed.

To augment the 125 mg/5 ml strength we are presenting, also for the first time, a 250 mg/5 ml strength for older children and adults.

Need any more reason for prescribing DQV-K 100 ml? Don't forget the unique fruit flavour and the assured quality of Dista penicillin.

'Distaqueine' V-K Syrup containing 125 mg or 250 mg of penicillin V (as potassium salt) BP per 5 ml.

**The first
penicillin
clinically
effective
against
Pseudomonas
pyocyannea**

Beecham's have now added Pyopen to their range of injectable semi-synthetic penicillins. Not only is it effective against *Ps. pyocyanea* (*Ps. aeruginosa*), but it is also highly active against *E. coli* and *Proteus* spp. including many strains of *Pr. vulgaris*, *Pr. morganii* and *Pr. rettgeri*, insensitive to other antibiotics.

Being a penicillin, Pyopen can be given if necessary in high dosages without fear of toxicity.¹

'Carbenicillin (Pyopen) itself is remarkably free from toxic effects and can be administered in sufficient dosages to obtain concentrations in the serum which are inhibitory to typical strains of *Ps. pyocyanea*, and the drug is also excreted in high concentration in the urine.'²

INDICATIONS AND DOSAGE

Urinary Tract Infections: Pyopen achieves high urinary levels, which, together with its bactericidal action against *Ps. pyocyanea*, *Proteus* spp. (including many strains resistant to other antibiotics), and *E. coli*, make it particularly suitable for the treatment of urinary tract infections.³

Dosage: 1 g. 6-hourly by intramuscular injection, for 5-10 days.

Other indications: Dosage will depend on the site of infection and the sensitivity of the infecting organism.*

Paediatric Dosage: Dependent upon weight and age of child. A suitable daily dosage, depending upon site and organism involved, should lie between 100 and 300 mg. per kilogram body weight.*

Contra-indications: Penicillin allergy. N.B. Pyopen has no activity against penicillinase-producing staphylococci.

Side-effects: Some pain may be experienced at the site of injection, otherwise as for injectable penicillins.

Availability: Each vial contains 1 g. carbenicillin as the disodium salt for injection.

*Further information may be obtained from the Company's Medical Department.

Infected Burns: Pyopen reduces or eliminates *Ps. pyocyanea* from burns, and prevents further invasion by this organism. It is recommended for prophylactic treatment of high-risk patients.⁴

Dosage: Prophylactic dosage: 1 g. 6-hourly by intramuscular injection, for five days.

Severe Systemic Infections and Septicaemia: Pyopen's low toxicity allows large intramuscular or intravenous dosage to be used to achieve the necessary high blood levels.⁵

Dosage: 12-30 g. daily by intravenous injection or infusion. Higher blood levels can be achieved by simultaneous administration of probenecid.

Nuvacon...another achievement of BDH research

Nuvacon*... a new British oral contraceptive.

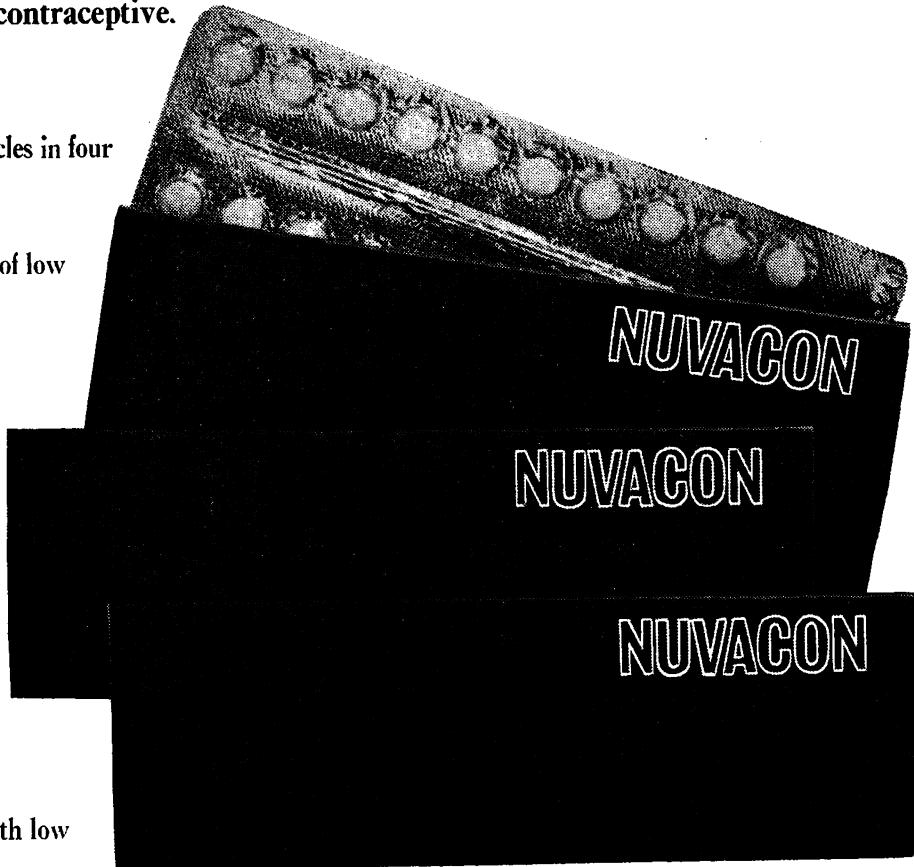

Tested and proven in over $\frac{1}{2}$ million cycles in four continents throughout the world.

Provides for the first time the benefits of low dose oral contraception with megestrol acetate—a pure progestogen with no androgenic and anabolic activity.

In contrast to the 19 nortestosterones, megestrol acetate is related to the naturally occurring female hormone progesterone.

Freedom from foreign royalties together with economies in manufacturing to meet world-wide demand enables Nuvacon to be offered at a price lower than many other oral contraceptives.

Efficacy and reliability maintained with low dosage at low cost.

A NEW ORAL GEL WITH STRIKING ANALGESIC AND ANTISEPTIC PROPERTIES

Bonjela has been shown in formal American trials to bring rapid relief from pain in 90% of all cases of oral ulceration, herpes labialis, gingivitis and denture sores. By rapid relief is meant marked alleviation of pain within 2-3 minutes.

Bonjela also promotes healing whenever the aetiology is partly or wholly

bacterial. Some ulceration originates from endocrinial, viral or fungal causes which may require other forms of treatment.

Even in these cases, where a bacterial element is superimposed on the original infection, Bonjela will reduce the severity of the infection and rapid relief from pain will be obtained.

FORMULA: Choline Salicylate 8.7%, Cetalkonium Chloride 0.01%, Alc. (95%) 39.0%, Menthol 0.057%, Glycer. 4.6%.

INDICATIONS: Herpes labialis, gingivitis, oral ulcerations, cheilosis, denture sores, infant teething disorders.

PRESERVATION: Bonjela is available in 10 g. tubes at a basic N.H.S. cost of 2/8½d. per tube.

LITERATURE AND SAMPLES ARE AVAILABLE ON REQUEST

Are you getting the full benefit of Penbritin's broad spectrum?

In all probability you have prescribed Penbritin in at least one of the many indications for which it is recommended—Urinary Tract infections, Gastro-intestinal Tract infections and Upper and Lower Respiratory Tract infections. Perhaps you are one of the doctors who take full advantage of Penbritin's broad spectrum and use it in all these indications.

If you use Penbritin in Upper Respiratory Tract infections and Bronchitis, the following paragraphs may reflect your own reasons. If you do not, they should be of special interest to you.

Activity. Penbritin's activity across the spectrum covers all the common causative organisms (except penicillinase-producers) in Upper Respiratory Tract infections and the different forms of Bronchitis. This exceptionally wide coverage means that not only does Penbritin eradicate the primary pathogens, but it also eradicates any secondary bacterial invaders that could remain undetected in the early days of infection.

In General Practice it is usually too time-consuming and inconvenient (however desirable) to have bacteriological analyses conducted to determine which organisms are involved. Penbritin's wide

coverage affords both active and preventive therapy before secondary infections can occur.

Action. Because it is a penicillin, Penbritin is bactericidal in action—killing the offending organisms instead of merely inhibiting their growth. This is of special advantage in treating children, the old and those patients whose natural defences have been lowered, because Penbritin's effectiveness does not depend upon the natural defences of the body.

Safety. Like all penicillins, Penbritin is free from permanent or dangerous side effects.* This aspect cannot be over-emphasised when treating children. Published clinical trials have already shown that with some other broad spectrum antibiotics there can be adverse effects—and a fair number of the patients treated for Upper Respiratory Tract infections and Bronchitis are children.

Penbritin's broad-spectrum activity, bactericidal action and comparative lack of toxicity place it firmly as **the therapy** in these infections, and nearly 100 world clinical references endorse this claim.

Dosage:

Children: Under 2 years: 62.5-125 mg. four times daily, before meals.

2-10 years: 125-250 mg. four times daily, before meals.

Adults: 250 mg. four times daily, before meals.

In severe infections these doses may be increased or Penbritin may be given by injection.

*Contra indication: Penicillin allergy. Side-effects: As with other penicillins.

Ferromyn-S gives 30% better iron absorption

SO?

So your patients make a faster recovery without increased dosage or increased side-effects.

Most oral iron treatments will get your patients better eventually. But only Ferromyn-S has an iron salt combined with free succinic acid, which research has shown, pushes up the absorption rate by 30%* – without increases in dosage or side-effects*.

Because the body absorbs more iron, patients respond to treatment sooner with quicker regeneration of the haemoglobin, faster repletion of tissue and storage iron. When you prescribe Ferromyn-S for your anaemic patients you are giving them all the benefits of the latest research on iron metabolism.

Ferromyn-S combines the maximum therapeutic effect

with the minimum side-effects at a cost of less than 2d. per day. What more could a Doctor – or patient – ask?

Ferromyn-S with Folic Acid is also available; each tablet contains 100 mcg Folic Acid, thus, at a dose of one tab.t.d.s. the recognised optimum daily dose of 300 mcg is prescribed.

FOLIC ACID DEFICIENCY and ANAEMIA OF PREGNANCY

Introducing

FOLEX-350

CONTAINING FOLIC ACID 350 MICROGRAMS IN EACH TABLET

DOSE

ONE TABLET DAILY THROUGHOUT PREGNANCY

It is now known beyond doubt that megaloblastic anaemia of pregnancy is caused by deficiency of folic acid.

From the very excellent results obtained over the years by the prophylactic use of folic acid and iron given orally from the beginning of pregnancy it is becoming more and more generally accepted that anaemia of pregnancy can be prevented. The question of the optimum dose of folic acid has not been easy to establish but recent work* suggests that not less than 300 mcg. and not more than 400 mcg. daily can be considered adequate.

In the light of this knowledge Folex-350 containing 350 mcg. of folic acid and 300 mg. of ferrous gluconate has been introduced.

They are "... easier to use, and appear more suited to obstetrical patients, in whom an applicator might be contra-indicated".³

IN THE LABORATORY

candidicidin has been shown⁴ to inhibit *Candida albicans* at 0.05 mcg/ml even after two days' incubation. Under the same circumstances nystatin had to be used at 5 mcg/ml to achieve inhibition.

IN CLINICAL PRACTICE^{1,2,3,5,6}

Candeptin gives equally remarkable results. Out of 312 women treated, both pregnant and non-pregnant, 255 were cured after one course of treatment. A further 33 responded to a second course giving an overall success rate of 93%.

Crystapen G—
three practical
improvements and a
price reduction

Crystapen G syrup In strep. throats two new five-day bottles make sure

It has been shown that in beta-haemolytic streptococcal infections ten days' penicillin therapy is necessary to produce the bacteriological clearance so essential in preventing sequelae such as rheumatic fever and glomerulonephritis.^{1,2} For any other penicillin-sensitive infection, five days' therapy is the minimum required for complete clearance.³

Crystapen G Syrup is now supplied in 100 ml bottles to give five days' continuous therapy to meet these requirements.

Patients with most common infections need one bottle and those with strep. throats need two.

Presentation

Crystapen G Syrup:
125 mg/5 ml: 100 ml bottle

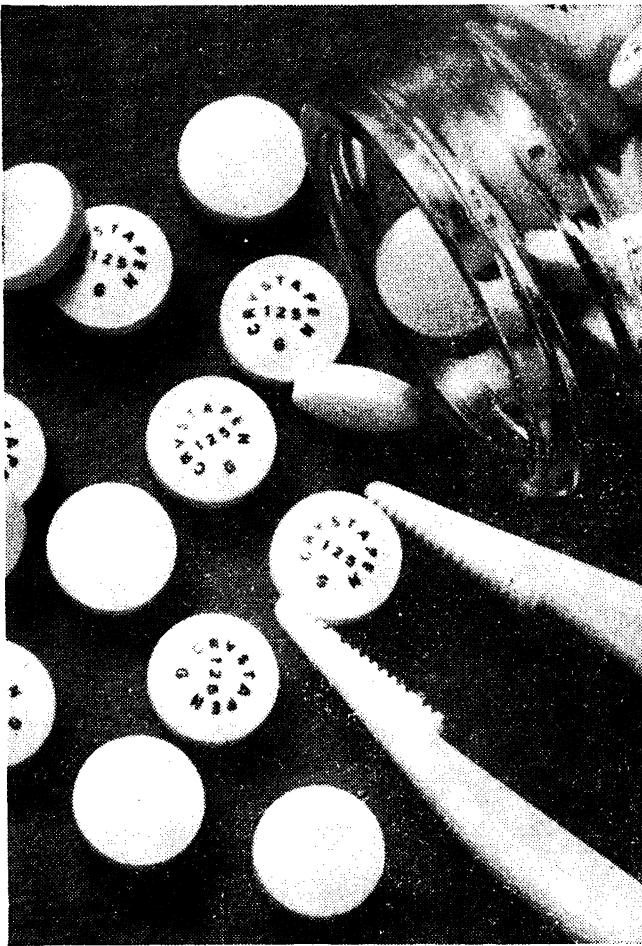

New lower-price tablets you'll recognise

Crystapen G Tablets (125 mg and 250 mg) have been redesigned. They are now film-coated with the name and strength printed on to make them easily identifiable—and yet they are smaller in size, are tasteless and easier to swallow. All Crystapen tablets were recently reduced in price by an average of 12½ per cent.

Glaxo brief

New strength syrup adds to the range

To complement the 125 mg/5 ml syrup there is now a 250 mg/5 ml Crystapen G Syrup for older children and adults. Both syrups contain penicillin G, which is just as effective in practice as the more expensive penicillin V.⁴ Indeed the new five-day bottles cost very little more than a three-day course of equivalent strength penicillin V.

Crystapen G Syrup
250 mg/5 ml: 100 ml bottle

For your detailed reading

Description

Crystapen G Syrup:—granules which, on reconstitution with water, produce flavoured syrups containing potassium penicillin G. Crystapen G Tablets:—potassium penicillin G tablets (film-coated or plain).

Mode of action

Given orally, soluble penicillin G is well absorbed when taken on an empty stomach and produces better blood levels than some insoluble forms of penicillin. Penicillin G is the most active antibiotic *in vitro* against the common penicillin-sensitive organisms.

Indications

Penicillin-susceptible infections, e.g., those due to beta-haemolytic streptococci, pneumococci and susceptible staphylococci. Prophylaxis before and after surgery and dental extractions. To prevent subacute bacterial endocarditis in patients with rheumatic heart disease.

Side effects

Occasionally patients experience diarrhoea. Sensitivity reactions such as urticarial rash are uncommon, and anaphylaxis is very rare. The latter demands immediate resuscitative measures, including injection of adrenaline and use of an intravenous corticosteroid.

Dosage

Infants: 62.5 mg to 125 mg (100,000 to 200,000 units). Children: 125 mg to 250 mg (200,000 to 400,000 units). Adults: 250 mg (400,000 units), or more. Doses should be given four times a day before meals, or more frequently if need arises. In patients with beta-haemolytic streptococcal infection it is always advisable to continue treatment for ten days to prevent bacteriological relapse and complications such as rheumatic fever or acute nephritis. N.B.—In serious and overwhelming infections when rapid control is essential, injections of sodium penicillin G (Crystapen) initially are advantageous.

Dispensing note

Crystapen G Syrups are prepared by adding 60 ml (2 fl oz) of water slowly, and shaking until the granules dissolve.

Storage

Crystapen G Tablets: store below 25°C (77°F) in a dry place, but not in a refrigerator. Crystapen G Syrups: when prepared as directed, must be used within five days if kept at room temperature (below 20°C) or within fourteen days if kept in a refrigerator. Dry granules maintain potency for two years if stored below 25°C.

Neobacrin and Betnovate-N Tulles now prescribable on EC10

except in Northern Ireland and Scotland

These two products have been in use for a considerable time in hospitals and industrial surgeries where they have proved to be very effective in their field of action—Neobacrin Tulle as a complete antibiotic wound dressing.

Betnovate-N Tulle as a topical corticosteroid/antibiotic for difficult exudative dermatoses. Both these products have recently been made available for EC10 prescription and because of this you can now utilise their many advantages in general practice to the full.

Why a tulle?

Tulles can often provide a more convenient and effective alternative to creams and ointments in the treatment of difficult exudative lesions or minor wounds. They give prolonged contact between the medication and the lesion and at the same time allow easy drainage of the exudate with reduced eschar formation. The dressing may be easily changed without discomfort to the patient and without disturbing the healed areas.

Isn't it time
we had a truly
specific
peripheral
vasodilator?

Opilon

Such peripheral vascular disorders as Raynaud's phenomenon, chilblains, acrocyanosis or excessively cold hands and feet have always been difficult to treat decisively. Now the introduction of OPILON gives the physician specific therapy for such conditions - because OPILON blocks the vasoconstrictor effect of noradrenaline in the arterioles of the skin. Unlike other vasodilators, OPILON does not alter blood flow to skeletal muscle; and because it is solely an alpha-adrenergic receptor blocking agent it cannot directly affect the heart or general circulation. When skin ischaemia is the cause of the complaint, OPILON reliably restores circulation.

OPILON is available as tablets of thymoxamine 40 mg., in bottles of 50 and 250. Basic NHS cost 18/- for 50 tablets, 84/- for 250 tablets. **Dosage:** One 40 mg. tablet four times a day, preferably at 8 a.m., 11 a.m., 2 p.m. and 5 p.m. **Side-effects:** Occasionally mild nausea, diarrhoea, vertigo, headache and facial flushing may be encountered. These are rare, however, and transient. No serious toxic effects have been reported and the development of tolerance has not been observed. **Contra-indications:** None is known. Full information and literature will gladly be sent on request.

ANTIBIOTICS AND THE INTESTINAL FLORA

Treatment with broad spectrum antibiotics suppresses the normal flora, which may be replaced by abnormal resistant organisms causing diarrhoea.

This change can be prevented or reversed by the implantation of *Lactobacillus acidophilus* which has been rendered antibiotic-resistant, and is thus able to multiply freely under these abnormal conditions. The products of growth of the organism are inimical to that of many other bacteria^{1,2} and thus contribute to its rapid preponderance over other species.

Oral treatment with antibiotic-resistant *L. acidophilus* in the form of ENPAC has been shown to eliminate *Candida* from the faeces of infants with antibiotic-induced diarrhoea, with relief of symptoms succeeded by rapid gain in weight^{3,4} and greatly to reduce the numbers of staphylococci in the faeces of patients treated with tetracyclines.⁵

No need, obviously, to acquaint you with the facts of Multiple Sclerosis, also known as Disseminated Sclerosis, or that over 40,000 people in Gt. Britain suffer from the disease. You'll doubtless know, too, about the work done by The Multiple Sclerosis Society of Gt. Britain and Northern Ireland, not the least part of which is to encourage a greater awareness on the part of the general public to the nature of the disease. In this respect, the co-operation of the medical profession is urgently needed. If you have a patient who is suffering from M.S., and you decide that it is in his best interests to acquaint him of this fact, the Society would be grateful if you would let him know of the work it is doing, and how, through its welfare services, it can help him, too.

Triptafen-DA

Trade Mark

antidepressant and tranquilliser

“...Triptafen-DA gave significantly better results than amitriptyline.”¹

“After three weeks' treatment, 79 per cent of patients receiving Triptafen-DA were improved or greatly improved as compared with 30 per cent receiving placebo.”²

“...the success rate with “Triptafen-DA” in the present study compares favourably with that reported for imipramine in the M.R.C. trial.”³

“Despite the substantial placebo response discussed, Triptafen-DA brought about an additional improvement which was significantly greater than that obtained in the control group.”⁴

These quotations are taken from four recently published papers which confirm the value of Triptafen-DA in the treatment of depression.

1 This paper (*Brit. J. Psychiat.*, 1967, **113**, 201) is a retrospective study of depressed patients treated with Triptafen-DA or with amitriptyline alone. The response rate for amitriptyline alone, 63.4 per cent, is in agreement with reports from other investigators; the rate for Triptafen-DA, 95.2 per cent, is by any standards exceptionally high.

2 This paper (*Brit. J. Psychiat.*, 1967, **113**, 195) describes a double-blind controlled trial of Triptafen-DA against placebo in the treatment of 129 patients suffering from depressive illness. After 3 weeks' treatment 79 per cent of patients treated with Triptafen-DA showed moderate to marked improvement, compared with 30 per cent of patients treated with placebo.

3 This is a report (*J. Irish med. Ass.*, 1966, **59**, 129) of a preliminary trial, in various types of depressive illness, of Triptafen-DA. Many of the patients needed treatment for only two weeks, and the results reported are those obtained at that time. Moderate improvement, marked improvement and clinical remission are grouped and show that 17 of 26 patients with endogenous depression, 12 of 15 patients with endogenous depression and agitation, and 5 of 8 patients with neurotic depression were improved or cured.

4 The final paper (*Medical Digest*, 1967, **12**, 71), by the G.P. Field Research Unit, describes a double-blind investigation of Triptafen-DA in 70 patients with depressive illness accompanied by anxiety. The results were assessed on improvement observed in 5 main symptoms: depression, anxiety, lack of energy, difficulty in concentration and insomnia. Improvement took place with both preparations but was significantly greater in patients receiving Triptafen-DA, particularly when this was given after a course of placebo treatment.

Indications

DEPRESSION
ANXIETY

A combined antidepressant-tranquillising action, such as that provided by Triptafen-DA, is established as the treatment of first choice in depressive illness and in psychoneurotic conditions such as anxiety states and menopausal disorders associated with anxiety and depression; also for the relief of the withdrawal syndrome in chronic alcoholism. Most psychoneurotic patients encountered in general practice exhibit symptoms of both depression and anxiety or agitation. The same is usually true of patients suffering from depressive illness regarded as endogenous in origin. In the treatment of such patients it has been stated that “if either the tranquilliser or the antidepressant is used alone, the possibility that the opposite symptom will be exacerbated is a definite risk of treatment” (*Curr. ther. Res.*, 1963, **5**, 310).

Contraindications

Glaucoma; urinary retention; severely-impaired liver function; the concurrent administration of other antidepressant drugs, particularly MAO inhibitors.

Precautions

Triptafen-DA should not be used in conjunction with MAO inhibitors and because of the persistent action of the latter at least 7 days should intervene between their withdrawal and the introduction of Triptafen-DA. Although Triptafen-DA has been shown to be free from teratogenic effects in laboratory animals, it should be used in pregnancy only after consideration of the risks involved in giving any drug to the pregnant patient.

Side effects

Side effects with Triptafen-DA are mild and of the type to be expected of the atropine-like action of amitriptyline (e.g. drowsiness, dizziness or blurred vision, tachycardia and insomnia) or characteristic of the safest of the phenothiazine derivatives (e.g. slight fall in blood pressure, mild tremor or in elevated dosage, Parkinsonian symptoms). In most cases these side effects disappear on continued therapy or reduction of the dosage. Idiosyncratic side effects (e.g. pruritus, nausea, diarrhoea and indigestion) have also been reported on rare occasions.

Dosage

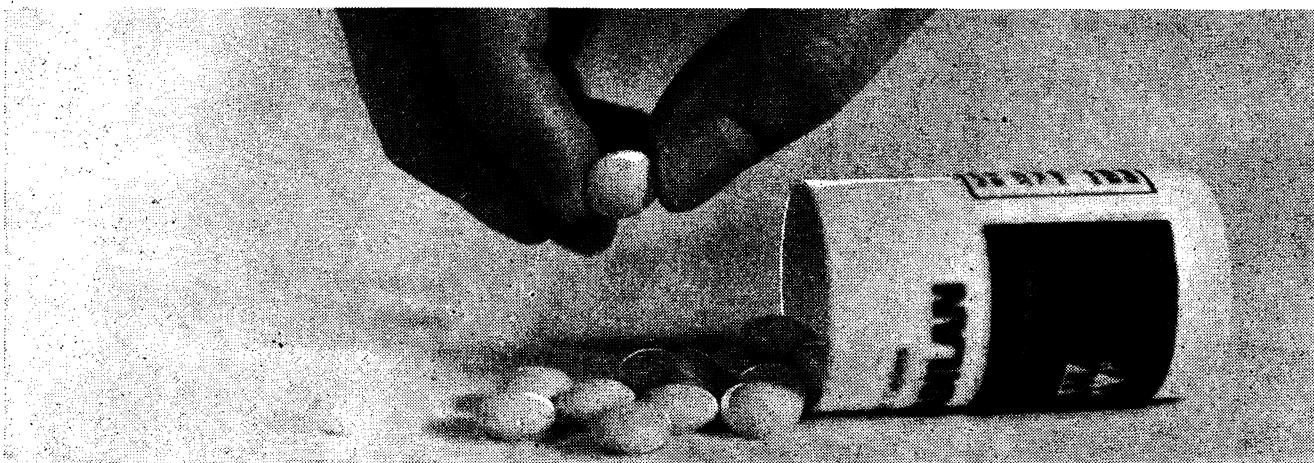

In most cases a dose of one Triptafen-DA Tablet or two teaspoonfuls (10 ml) of Triptafen-DA Suspension 3 times a day is recommended. If necessary a fourth similar dose may be prescribed at night.

Presentation

Triptafen-DA Tablets each contain amitriptyline hydrochloride BP 25 mg and perphenazine BP 2 mg; they are available in bottles of 50 and 500. The basic NHS cost of treatment with Triptafen-DA is 4/8d. per week. Triptafen-DA Suspension contains 37.5 mg amitriptyline embonate (equivalent to 25 mg amitriptyline hydrochloride BP) and 2 mg perphenazine BP in each 10 ml. It is available in bottles of 142 ml (5 fl oz) and 500 ml. Basic NHS cost for a bottle of 142 ml suspension is 7/6d.

OPTIMUM VASODILATATION

'BRADILAN' is tetranicotinoylfructose, a new research development which provides effective, sustained vasodilation by a direct action on the smooth muscle of peripheral arterial vessels.

SUSTAINED ACTIVITY

In the alkaline region of the alimentary tract, 'BRADILAN' (coated tablets of 250 mg. tetranicotinoylfructose) is gradually and evenly hydrolysed to nicotinic acid which is absorbed to provide a continuous adequate level of activity over several hours.

IMPROVED TOLERANCE

Despite the high activity level provided, eight published clinical trials on 'BRADILAN' stress the freedom, from nicotinic acid side effects (facial flushing, itching, headache, nausea), even at high dosage.

“IS THERE AN ALTERNATIVE?”

The N.H.S. is ailing. Must it stay that way?

Recently the *B.M.J.* has examined alternative ways of finding money and administering the service. What about a corporation? Or decentralization? Or a lottery? Or private insurance? These and other possibilities have been considered by experts in economics and related fields. All the articles have now been reprinted in booklet form, with a medical summing up by Sir Robert Aitken, Vice-chancellor of the University of Birmingham. COLOMYCIN

Clinical reports on COLOMYCIN clearly show its outstanding value in the treatment of Gram-negative urinary and other systemic infections (with the exception of proteus), particularly those cases which have been found resistant to antibiotics in current use. COLOMYCIN is well tolerated and the development of resistant organisms is not a problem. The use of COLOMYCIN as a bactericidal antibiotic has been recognised by its inclusion in the 1966 Addendum to the British Pharmacopoeia.

**For efficient conception control
with minimum physiological disturbance**

The low dosage regimen of Feminor Sequential closely parallels the body's normal pattern of hormone production. To inhibit ovulation it employs an oestrogen alone for the first fifteen days - with the addition of a progestogen for the last five days to establish a normal secretory endometrium. The total amount of hormone taken is limited to that necessary for effective inhibition of ovulation. Thus there is minimum physiological disturbance and a marked reduction in side effects such as breakthrough bleeding, breast discomfort and weight gain.

Feminor Sequential is presented in wallets containing one month's supply of 20 foiled tablets: 15 pink tablets containing mestranol 0.1 mg, 5 white tablets containing mestranol 0.075 mg, norethynodrel 5.0 mg.

PRACTICES

(Executive Councils)

For vacancies (except those in Scotland) apply on Form E.C.16A, obtainable from the Executive Council. Mark envelope "Vacancy."

APPLICATIONS ARE INVITED FOR a medical practice vacancy in the designated area of Wickford, in the Basildon urban district, where the average number of patients for seven doctors is 3,444. Although no list of patients exists at the moment, it is not anticipated that the successful candidate would have difficulty in building up a substantial list in a reasonably short period of time. Every assistance will be given in finding suitable residential/practice accommodation.

Subject to compliance with the necessary criteria an initial practice allowance will be paid to the successful candidate on the following basis: either (a) over four years commencing at £1,800; or (b) over two years commencing at £3,000 and reducing to not more than £1,200 in the second year, depending on list growth. Full details given on application.

Applications should be made on Form E.C.16A to the undersigned by Friday, October 27, 1967.—E. Bergdahl, Clerk, Essex Executive Council, Queen's Hall, Kings Avenue, Holland-on-Sea, Essex. (H.4893)

OPPORTUNITY FOR
A DOCTOR IN
WEST AFRICA

If you are between 25 and 45 years of age, this vacancy offers an attractive opportunity of serving in tropical Africa with a British owned company.

For those who have served in the tropics, no more need be said at this stage. For those who have not, here is a chance to obtain a wealth of clinical experience. The period of service can be for a single tour of about 18 months, or you can make your career in our employ.

Remuneration is generous, accommodation is provided, free passages, and education allowances which will cover boarding-school fees for children continuing education in U.K.

If these brief details interest you we suggest you should write to us and we will invite you to come and see us and discuss all aspects of the work and the terms of service. Write to Box OV.268, B.M.J.

HOMES**ST. ANDREW'S HOSPITAL
NORTHAMPTON**

President: Lieutenant-Colonel J. Chandos-Pole, O.B.E.
Medical Director: James Harper, M.B., F.R.C.P.(Edin.), D.P.M.

This private hospital receives patients, both male and female, suffering from nervous and mental disorders, including alcoholism and senile illnesses. The fees range from eighteen guineas per week. Private rooms with special nurses can be provided, either in the hospital or in one of the villas in the grounds. The hospital is situated in 130 acres of pleasant grounds which provide all recreation facilities. These include a nine-hole golf course, sports ground, tennis courts, etc. A recreation and occupation centre, known as Gloucester House, has been opened recently, which includes an occupational therapy department, a swimming pool, a squash court and a library with an adjoining reading room.

WANTAGE HOUSE

This is a separate reception unit to which patients may be admitted. It is equipped for the complete investigation of nervous and mental disorders by the most modern methods. All forms of treatment are available.

Charges for treatment at St. Andrew's are allowable for benefit to British United Provident Association and Private Patients Plan subscribers.

For terms and further particulars apply to the Medical Director (Telephone No. 34664 Northampton), who can be seen in London by appointment.
