

# "IS THERE AN ALTERNATIVE?"

**The N.H.S. is ailing. Must it stay that way?**

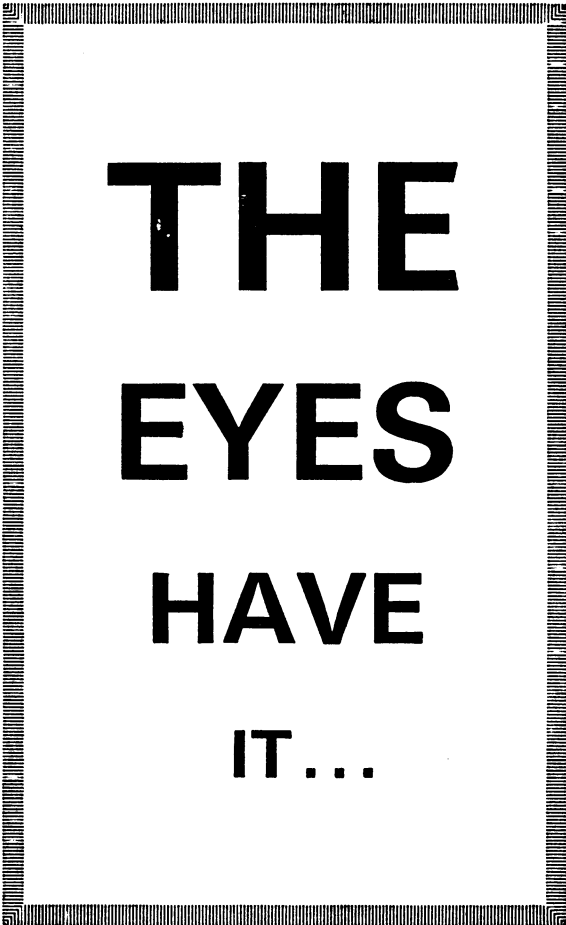

Recently the *B.M.J.* has examined alternative ways of finding money and administering the service. What about a corporation? Or decentralization? Or a lottery? Or private insurance? These and other possibilities have been considered by experts in economics and related fields. All the articles have now been reprinted in booklet form, with a medical summing up by Sir Robert Aitken, Vice-chancellor of the University of Birmingham. Anyone with an interest in the National Health Service must read this book.

# Ten reasons why Acthar Gel is the most widely prescribed ACTH

**ACTHAR  
GEL** is the most reliable form of ACTH<sup>1</sup>.

**ACTHAR  
GEL** is highly purified and standardised to ensure reliable potency, and has been used safely and effectively for fifteen years.

**ACTHAR  
GEL** provides optimum length of adrenal stimulation – twelve to sixteen hours,<sup>4,6,7</sup> this allows pituitary recovery time. Risk of pituitary suppression is minimal – no growth stunting<sup>4</sup>.

**ACTHAR  
GEL** has been shown to have a clinical effect lasting up to three days or more<sup>3</sup> from one injection.

**ACTHAR  
GEL** is safe and side effects, when seen, are usually symptoms of overdosage<sup>1,5</sup>.

**ACTHAR  
GEL** is not a steroid<sup>8</sup> and treatment can be stopped when unnecessary – no withdrawal symptoms,<sup>2,3,9</sup> no problem of bruising or when presenting for surgery.

**ACTHAR  
GEL** is now liquid at normal room temperatures and is easy to inject.

**ACTHAR  
GEL** is a solution not a suspension and accurate dosage is ensured.

**ACTHAR  
GEL** Gelatin is the optimum delay medium<sup>7</sup> and unlikely to cause side effects.

**ACTHAR  
GEL** has featured in the vast majority of published clinical papers on ACTH. Some of the latest are given.

***The brand of iron which provides a good haematinic response in iron-deficiency anaemia—a considerably reduced incidence of side effects and the least toxic form of iron***

A double-blind comparison of Ferrodic with ferrous sulphate, both preparations containing 50 mg of ferrous iron + 12.5 mg ascorbic acid, in the treatment of iron-deficiency anaemia, showed that exactly equivalent haematinic effects were obtained with the two drugs. However, 'not only did Ferrodic cause side effects in a significantly smaller proportion of patients than ferrous sulphate, but the severity of such side-effects was also significantly less with Ferrodic.'

(*Practitioner*, 1967, 198, 848)

A very similar double-blind, clinical comparison of Ferrodic and ferrous sulphate has recently been published. The Author's purpose was to confirm the haematinic effectiveness and low incidence of side effects of Ferrodic, in view of its palatability and relative freedom from toxicity. The results again showed Ferrodic to have an equivalent haematinic effect to that of ferrous sulphate but 'side-effects occurred in a significantly higher proportion of subjects who received ferrous sulphate.'

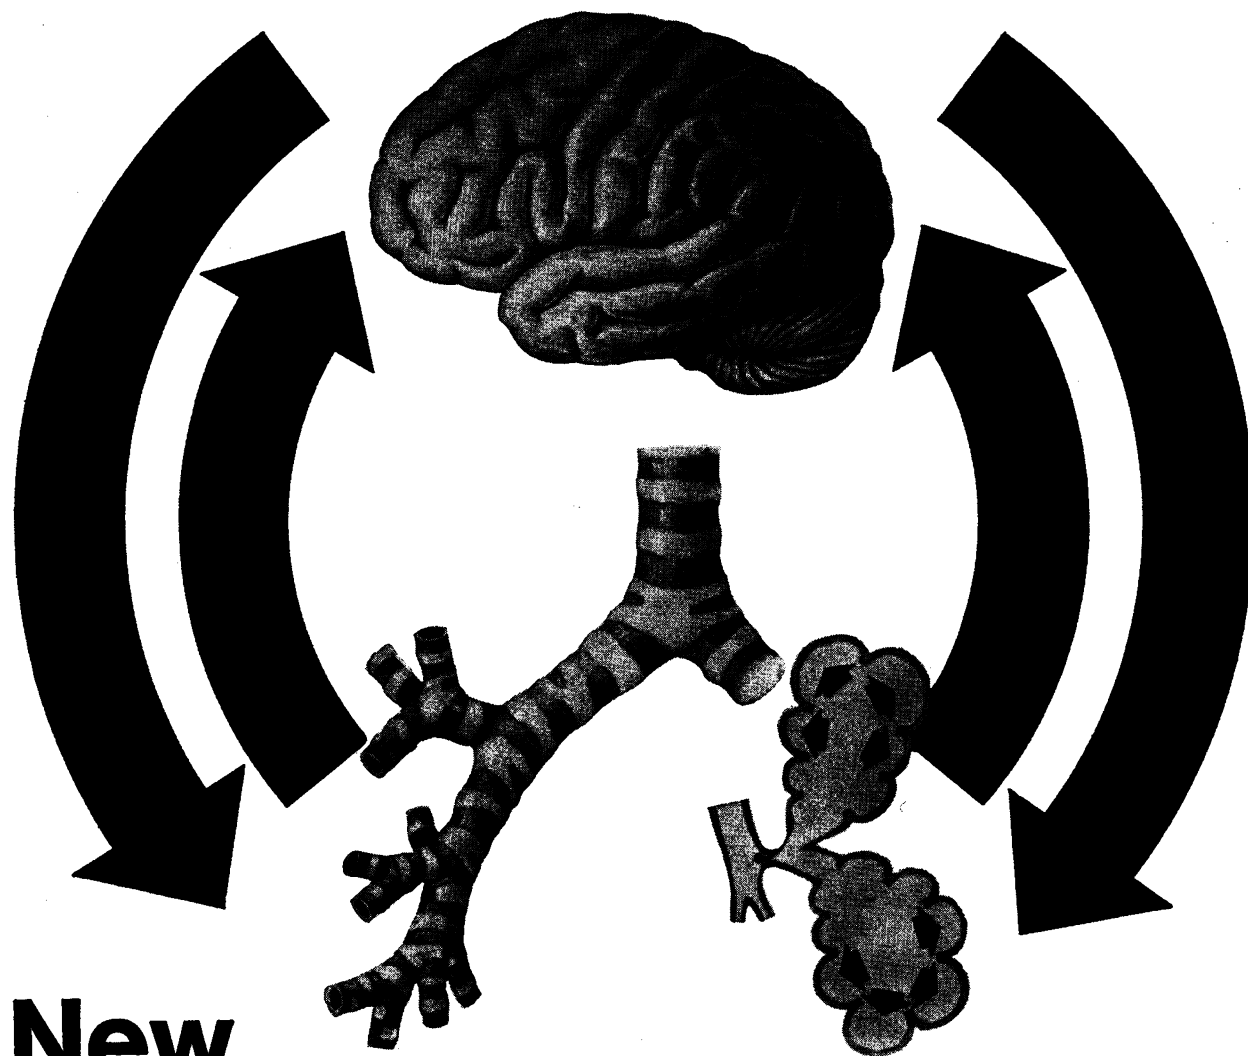

(*J. Therap. and Clin. Res.*, 1967, 1, 4)

FERRODIC TABLETS each contain ferrous iron (as ferrous carbonate) 50 mg and ascorbic acid 12.5 mg and are supplied in bottles of 100 tablets.

## Alupent - Sed<sup>®</sup>

(orciprenaline sulphate 1-(3,5-dihydroxyphenyl)-2-isopropylaminoethanol-sulphate and amylobarbitone)

When the soma reflects the psyche in the asthmatic patient...

When the psyche reflects the soma in the chronic bronchitic patient...

### Alupent - Sed<sup>®</sup>

is a rational treatment.

Each tablet of Alupent-Sed contains:  
20 mg. of orciprenaline sulphate  
20 mg. of amylobarbitone.

This combination ensures that the patient receives the optimum dose of Alupent to relieve the wheezing and sufficient sedation to relieve anxiety.

#### Dosage:

Adult—1 tablet of Alupent-Sed four times daily.

Children 6-12 years—½ tablet Alupent-Sed 3-4 times daily.

#### Contra-indications:

Alupent-Sed should not be given to patients with thyrotoxicosis. Alupent-Sed should not be given to patients who have a known idiosyncrasy to barbiturates, or a condition in which barbiturates are contra-indicated.

#### Caution:

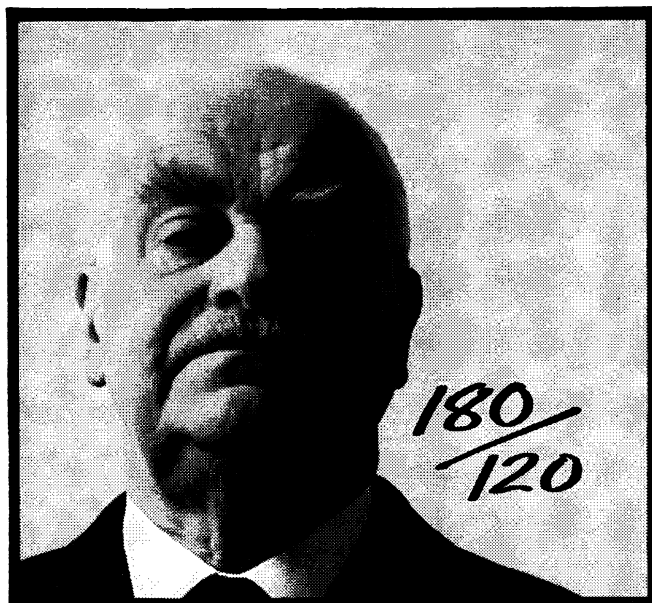

In view of the known interaction between sympathomimetic amines and monoamine oxidase inhibitors, care should be exercised if it is proposed to administer an MAO inhibitor concurrently with Alupent-Sed.

Further information and samples are available on request.

# **Are you getting the full benefit of Penbritin's broad spectrum?**

In all probability you have prescribed Penbritin in at least one of the many indications for which it is recommended—Urinary Tract infections, Gastro-intestinal Tract infections and Upper and Lower Respiratory Tract infections. Perhaps you are one of the doctors who take full advantage of Penbritin's broad spectrum and use it in all these indications.

If you use Penbritin in Upper Respiratory Tract infections and Bronchitis, the following paragraphs may reflect your own reasons. If you do not, they should be of special interest to you.

**Activity.** Penbritin's activity across the spectrum covers all the common causative organisms (except penicillinase-producers) in Upper Respiratory Tract infections and the different forms of Bronchitis. This exceptionally wide coverage means that not only does Penbritin eradicate the primary pathogens, but it also eradicates any secondary bacterial invaders that could remain undetected in the early days of infection.

In General Practice it is usually too time-consuming and inconvenient (however desirable) to have bacteriological analyses conducted to determine which organisms are involved. Penbritin's wide

coverage affords both active and preventive therapy before secondary infections can occur.

**Action.** Because it is a penicillin, Penbritin is bactericidal in action—killing the offending organisms instead of merely inhibiting their growth. This is of special advantage in treating children, the old and those patients whose natural defences have been lowered, because Penbritin's effectiveness does not depend upon the natural defences of the body.

**Safety.** Like all penicillins, Penbritin is free from permanent or dangerous side effects.\* This aspect cannot be over-emphasised when treating children. Published clinical trials have already shown that with some other broad spectrum antibiotics there can be adverse effects—and a fair number of the patients treated for Upper Respiratory Tract infections and Bronchitis are children.

Penbritin's broad-spectrum activity, bactericidal action and comparative lack of toxicity place it firmly as **the therapy** in these infections, and nearly 100 world clinical references endorse this claim.

**Dosage:**

Children: Under 2 years: 62.5-125 mg. four times daily, before meals.

2-10 years: 125-250 mg. four times daily, before meals.

Adults: 250 mg. four times daily, before meals.

In severe infections these doses may be increased or Penbritin may be given by injection.

\*Contra indication: Penicillin allergy. Side-effects: As with other penicillins.

Full information is available on request.

**In strep. throats,  
two new five-day  
bottles make sure**

Penicillin is the drug of choice in beta-haemolytic streptococcal infections.<sup>1,2,3</sup> In practice penicillin G is as effective as the more expensive penicillin V.<sup>4</sup> Ten days' penicillin therapy is necessary to produce the bacteriological clearance so essential in preventing relapse and sequelae such as rheumatic fever and glomerulonephritis.<sup>5,6</sup> For any other penicillin-sensitive infection, five days' therapy is the minimum.<sup>7</sup> Thus Crystapen G Syrup now provides the right preparation (now in two strengths—125 mg/5 ml and 250 mg/5 ml) in the right bottle size at the right price—the new five-day bottle costs little more than three-day bottles of equivalent strength penicillin V.

**New low-cost  
tablets that  
patients prefer**

Printed and easy to identify; small, film-coated and easy to swallow, new Crystapen G Tablets are highly acceptable. All Crystapen tablets were recently reduced in price by an average of 12½ per cent.

## Crystapen G

### oral preparations

Soluble penicillin for systemic therapy  
by mouth

#### Description

Crystapen G Syrups:—granules which, on reconstitution with water, produce flavoured syrups containing potassium penicillin G. Crystapen G Tablets:—potassium penicillin G tablets (film-coated or plain).

#### Mode of action

Given orally, soluble penicillin G is well absorbed when taken on an empty stomach and produces better blood levels than some insoluble forms of penicillin. Penicillin G is the most active antibiotic in vitro against the common penicillin-sensitive organisms.

#### Indications

Penicillin-susceptible infections, e.g., those due to beta-haemolytic streptococci, pneumococci and susceptible staphylococci. Prophylaxis before and after surgery and dental extractions. To prevent subacute bacterial endocarditis in patients with rheumatic heart disease.

#### Side effects

Occasionally patients experience diarrhoea. Sensitivity reactions such as

urticarial rash are uncommon, and anaphylaxis is very rare. The latter demands immediate resuscitative measures, including injection of adrenaline and use of an intravenous corticosteroid.

#### Dosage

Infants: 62.5 mg to 125 mg (100,000 to 200,000 units).  
Children: 125 mg to 250 mg (200,000 to 400,000 units). Adults: 250 mg (400,000 units), or more. Doses should be given four times a day before meals, or more frequently if need arises. In patients with beta-haemolytic streptococcal infection it is always advisable to continue treatment for ten days to prevent bacteriological relapse and complications such as rheumatic fever or acute nephritis. N.B.—In serious and overwhelming infections when rapid control is essential, injections of sodium penicillin G (Crystapen) initially are advantageous.

#### Dispensing note

Crystapen G Syrups are prepared by adding 60 ml (2 fl oz) of water slowly, and shaking until the granules dissolve.

#### Storage

Crystapen G Tablets: store below 25°C (77°F) in a dry place, but not in a refrigerator. Crystapen G Syrups: when prepared as directed, must be used within five days if kept at room temperature (below 20°C) or within fourteen days if kept in a refrigerator. Dry granules maintain potency for two years, if stored below 25°C.

#### Legal restriction

To be supplied on prescription only (Therapeutic Substances Act: Part II).

#### Presentation

Crystapen G Syrup (125 mg/5 ml):  
Crystapen G Syrup (250 mg/5 ml):  
100 ml bottles.  
Crystapen G Tablets (125 mg and 250 mg):  
bottles of 100 and 500.

# Four Impressive New Books from Saunders

Teplick, Haskin and Schimert:

## ROENTGENOLOGIC DIAGNOSIS

The authors of this book had for many years been familiar with Beeson and McDermott—Cecil-Loeb Textbook of Medicine: they had used it as medical students and as interns and had come to rely on it as a general medical reference source in their daily practice of radiology. They had become increasingly aware of the fact that size and space limitations made it impossible to include in the Textbook as many radiograms as would be indicated under ideal conditions. They conceived the notion of a companion volume which would follow the Textbook of Medicine exactly in terms of organisation and arrangement, and which would present radiograms of high quality for every disease discussed in Beeson and McDermott in which there are any manifestations visualizable by X-ray.

House surgeons, residents and surgeons will find the book tremendously valuable and radiologists, too, will recognise it as one of the most outstanding collections of radiograms ever assembled between covers.

## DOES YOUR TEA BREAK CAUSE YOU HEARTBREAK?

When your staff argue about whose turn it is to brew up, think for a moment how Drinkmaster could solve your coffee and tea break problems once and for all. The Drinkmaster serves your staff, *in their place of work*, with freshly made and piping hot coffee, tea, drinking chocolate, or soups, with a minimum of expense and no interruption in the work routine. The Drinkmaster dispenser, which takes up less space than a typewriter, is designed to serve groups of four to eight people. Dispensers are supplied on FREE ON LOAN and can be installed at strategic points throughout your organisation to provide a 24-hour refreshment service for your staff and to save you time and money. And they eliminate the health risks which are inevitable where drinks are made in unhygienic conditions and served in cracked or dirty crockery.

# Lyndiol 2.5

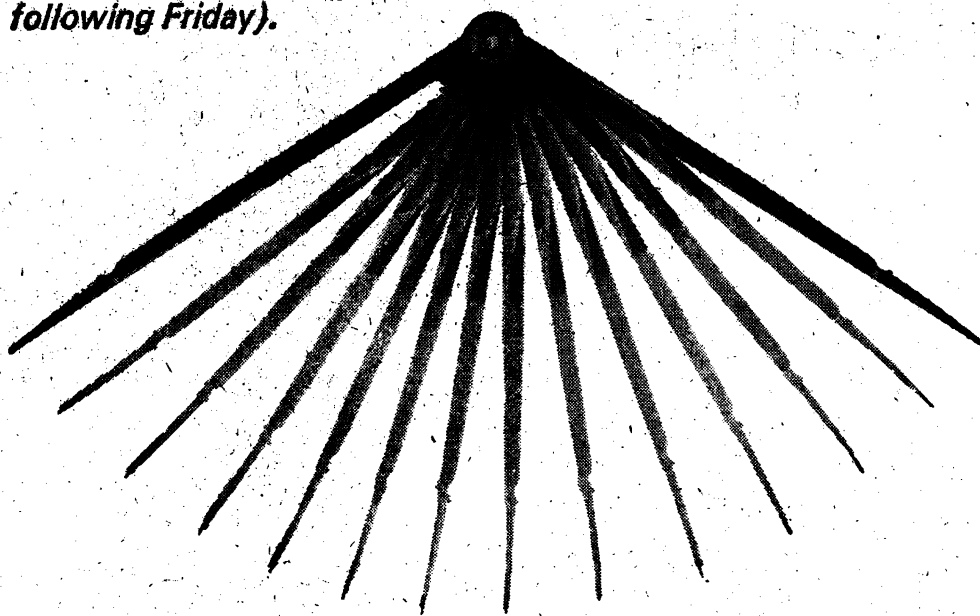

## is only marginally better than other oral contraceptives...

The physician, trained to make rational choices, faces a problem when he comes to The Pill, for he knows that as far as the combined oral contraceptives are concerned all are virtually 100% effective.

He looks then for other significant differences. First of these is the incidence of side-effects. *(The latest data from the F.P.A. show that Lyndiol 2.5 is substantially free from side-effects).*

Price is another factor, especially as the acceptability of the oral contraceptive idea spreads down the socio-economic scale to those families who perhaps need contraception most and can afford it least. *(Lyndiol 2.5 offers the most reasonable price-to-patient).*

And he considers patient reliability—which dosage scheme will be easiest to follow? *(Lyndiol 2.5's 'fixed day' routine means simply that if a patient starts on, say, a Friday, she finishes three weeks later on a Friday and begins her new course on the following Friday).*

**Yesterday,  
Doctor Carr delivered  
a boy weighing 86 lbs.**

Yesterday was when Dr. Carr took time off to accompany his eleven-year-old son David to his first boarding school. It was also the day when Dr. Carr had a celebration drink with his bank manager. Because, from now on, David's going to be far less of a financial burden. There'll be plenty of money for his school fees, his books, even his clothing. And enough left over to start him on a career or send him to university.

Dr. Carr asked to see one of our representatives a few days after the boy was born. And, acting upon our advice, he took out an Educational Policy to cover the most expensive years in his son's future. He invested a modest sum annually but, with accumulated profits, it will ensure David a first-class schooling for the next eight years.

This is just one example of the many policies we have designed specially for doctors and dentists. And since the Society is wholly owned by the policy holders all the profits belong to them and are distributed by bonus declaration every three years.

If you are eligible to join the Society you should be sharing these profits. So why not write to us now without any obligation, of course, for further details? There are separate brochures for Sickness and Accident; Educational; Life; Personal Pension; Family Income; Provision for Estate Duty; Car Hire Purchase. A card giving your name, address, date of birth and quoting Reference No. 001 and listing the policies that interest you, will receive prompt attention.

# Beyond The Pill... Mixogen...

as dramatically successful  
in preventing menopausal distress  
as are the oral contraceptives  
in family planning

The women who use an oral contraceptive during her later potential child-bearing years need not fear menopausal problems.

But for those not 'on the Pill' when reaching the menopause, a hormone problem remains. *At the menopause three out of four women require hormone replacement.*

Mixogen fulfils their need. The preparation, a finely balanced combination of oestrogen and androgen, acts synergistically to ensure complete relief of all menopausal symptoms.

And it does so without recourse to sedatives which—apart from other considerations—fail to deal with the underlying cause of the symptoms.

## *Distalgesic erases pain*

Distalgesic is effective where prolonged medication is necessary; in pain which recurs intermittently and in the acute pain of injury. In severe pain, Distalgesic can often delay the need for parenteral narcotics. It is non-narcotic, does not cause constipation, addiction or gastric bleeding.

Distalgesic tablets – specially shaped for ease of swallowing and identification – each contain 32.5 mg dextro-propoxyphene hydrochloride, authoritatively described as the most promising alternative to codeine, and 325 mg paracetamol, generally regarded as the safest of the antipyretic analgesics.

There's a very good  
reason why this  
IUD is being  
well accepted

It's not rejected

The crucial word in any talk concerning IUD's is not efficacy, but *acceptance*. A small number of women spontaneously extrude the IUD or have to have it removed. But the unique shape of the SAF-T-COIL ensures maximum *in utero* retention. Once inserted, the SAF-T-COIL assumes its distinctive configuration, conforming closely to the shape of the uterine cavity. Rejection is extremely unlikely.

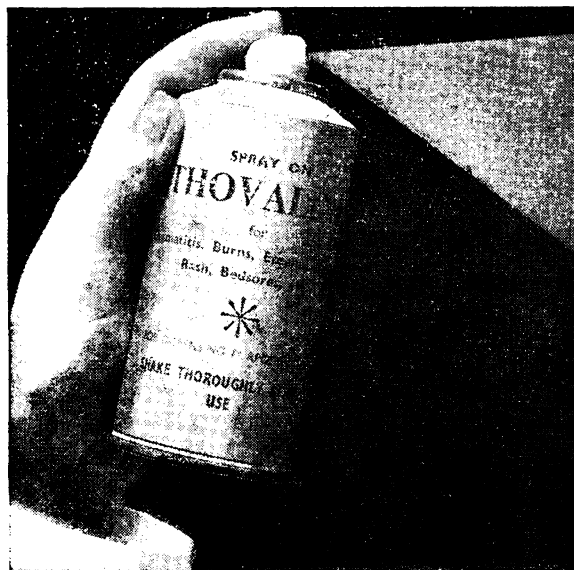

Because of its presentation the SAF-T-COIL is introduced more easily and more quickly than any other device; placement is smooth and non-irritating. No sterilisation or assembly is required. Each sterile, peel package contains the integral unit of coil and insertion plunger.

# Triptafen-DA

## antidepressant and tranquilliser

"... Triptafen-DA gave significantly better results than amitriptyline."<sup>1</sup>

"After three weeks' treatment, 79 per cent of patients receiving Triptafen-DA were improved or greatly improved as compared with 30 per cent receiving placebo."<sup>2</sup>

"... the success rate with "Triptafen-DA" in the present study compares favourably with that reported for imipramine in the M.R.C. trial."<sup>3</sup>

"Despite the substantial placebo response discussed, Triptafen-DA brought about an additional improvement which was significantly greater than that obtained in the control group."<sup>4</sup>

These quotations are taken from four recently published papers which confirm the value of Triptafen-DA in the treatment of depression.

**1** This paper (*Brit. J. Psychiat.*, 1967, **113**, 201) is a retrospective study of depressed patients treated with Triptafen-DA or with amitriptyline alone. The response rate for amitriptyline alone, 63.4 per cent, is in agreement with reports from other investigators; the rate for Triptafen-DA, 95.2 per cent, is by any standards exceptionally high.

**2** This paper (*Brit. J. Psychiat.*, 1967, **113**, 195) describes a double-blind controlled trial of Triptafen-DA against placebo in the treatment of 129 patients suffering from depressive illness. After 3 weeks' treatment 79 per cent of patients treated with Triptafen-DA showed moderate to marked improvement, compared with 30 per cent of patients treated with placebo.

**3** This is a report (*J. Irish med. Ass.*, 1966, **59**, 129) of a preliminary trial, in various types of depressive illness, of Triptafen-DA. Many of the patients needed treatment for only two weeks, and the results reported are those obtained at that time. Moderate improvement, marked improvement and clinical remission are grouped and show that 17 of 26 patients with endogenous depression, 12 of 15 patients with endogenous depression and agitation, and 5 of 8 patients with neurotic depression were improved or cured.

**4** The final paper (*Medical Digest*, 1967, **12**, 71), by the G.P. Field Research Unit, describes a double-blind investigation of Triptafen-DA in 70 patients with depressive illness accompanied by anxiety. The results were assessed on improvement observed in 5 main symptoms: depression, anxiety, lack of energy, difficulty in concentration and insomnia. Improvement took place with both preparations but was significantly greater in patients receiving Triptafen-DA, particularly when this was given after a course of placebo treatment.

### Indications

DEPRESSION  
ANXIETY

PSYCHONEUROSIS  
PSYCHOSOMATIC ILLNESS

A combined antidepressant-tranquillising action, such as that provided by Triptafen-DA, is established as the treatment of first choice in depressive illness and in psychoneurotic conditions such as anxiety states and menopausal disorders associated with anxiety and depression; also for the relief of the withdrawal syndrome in chronic alcoholism. Most psychoneurotic patients encountered in general practice exhibit symptoms of both depression and anxiety or agitation. The same is usually true of patients suffering from depressive illness regarded as endogenous in origin. In the treatment of such patients it has been stated that "if either the tranquilliser or the antidepressant is used alone, the possibility that the opposite symptom will be exacerbated is a definite risk of treatment" (*Curr. ther. Res.*, 1963, **5**, 310).

### Contraindications

Glaucoma; urinary retention; severely-impaired liver function; the concurrent administration of other antidepressant drugs, particularly MAO inhibitors.

### Precautions

Triptafen-DA should not be used in conjunction with MAO inhibitors and because of the persistent action of the latter at least 7 days should intervene between their withdrawal and the introduction of Triptafen-DA. Although Triptafen-DA has been shown to be free from teratogenic effects in laboratory animals, it should be used in pregnancy only after consideration of the risks involved in giving any drug to the pregnant patient.

### Side effects

Side effects with Triptafen-DA are mild and of the type to be expected of the atropine-like action of amitriptyline (e.g. drowsiness, dizziness or blurred vision, tachycardia and insomnia) or characteristic of the safest of the phenothiazine derivatives (e.g. slight fall in blood pressure, mild tremor or in elevated dosage, Parkinsonian symptoms). In most cases these side effects disappear on continued therapy or reduction of the dosage. Idiosyncratic side effects (e.g. pruritus, nausea, diarrhoea and indigestion) have also been reported on rare occasions.

### Dosage

In most cases a dose of one Triptafen-DA Tablet or two teaspoonfuls (10 ml) of Triptafen-DA Suspension 3 times a day is recommended. If necessary a fourth similar dose may be prescribed at night.

### Presentation

Triptafen-DA Tablets each contain amitriptyline hydrochloride BP 25 mg and perphenazine BP 2 mg; they are available in bottles of 50 and 500. The basic NHS cost of treatment with Triptafen-DA is 4/8d. per week. Triptafen-DA Suspension contains 37.5 mg amitriptyline embonate (equivalent to 25 mg amitriptyline hydrochloride BP) and 2 mg perphenazine BP in each 10 ml. It is available in bottles of 142 ml (5 fl oz) and 500 ml. Basic NHS cost for a bottle of 142 ml suspension is 7/6d.

## MEDICAL DIRECTOR DESIGNATE

Our client is the British subsidiary of a very large European pharmaceutical Company. The products are strongly research based and well established, and new ones are being introduced at a satisfactory rate. The Company has a very good professional reputation. The opportunity offered is that of sole medical adviser to assist the growth of the Company in all medical respects. The doctor appointed will have a relatively free hand in this, assisted by part-time consultants and a medical information officer and his staff. He will be well supported by other Group Companies and regular visits to the parent Company and to other subsidiaries will be required. He will be encouraged to take a clinical assistantship if he wishes to do so. A man in his thirties would be preferred with good professional qualifications and connections, and previous experience of the commercial side of the industry. Others who feel ready for this appointment will of course be considered. The salary offered will be negotiated above £4,000 plus car and pension scheme. Location: North London. (Ref: PF23/2502/BMJ.)

The identity of candidates will not be revealed to our client without prior permission. Applicants should forward brief details, quoting the reference number, to:

# These studies show why Pro-Banthine\* reduces the pain of peptic ulcer

propantheline bromide

**1** E.B., male, age 48. Normal antral contraction. Pyloric opening is not seen. It is difficult to differentiate a deep prepyloric contraction from a "pyloric fleurette" of true pylorus.

**2** Same subject after 6 mg. of propantheline bromide intravenously; antral contractions ceased. The pyloric orifice remains open and is easily identified. Better visualisation of the antrum is also obtained.

These intra-gastric photographs were taken by the techniques of continuous cine-fibregastroscopy during the intravenous administration of Pro-Banthine, and demonstrate clearly its ability to inhibit gastric motor activity at a low dosage level. The ability of Pro-Banthine, whether given orally or parenterally, to reduce spasm, coupled with its

superior activity in reducing gastric acid secretion, leading to rapid pain relief, is the reason for the widespread use of the compound in the treatment of peptic ulcer.

## ZAMBIA FLYING DOCTOR SERVICE

Based on Ndola in the Copperbelt this service operates to remote areas of Zambia, using professionally flown twin-engined aircraft and a ground radio network. Each airstrip clinic is visited regularly several times a week.

Applications are invited from doctors.

- Duties:**
1. To carry out regular clinics at Bush airstrips. This is much the greater portion of the work.
  2. To accompany the aircraft on emergency patient evacuation flights.
  3. To give assistance and advice over the radio network when appropriate.

Seriously ill patients with medical complaints are treated at the clinics where there is provision for their accommodation. Patients with serious surgical diagnoses are flown to hospital so that the doctors with the service are not required to do major surgery. Of the patients attending the clinics 49% are children.

**Research:** This is an essential part of the service and funds are available for this purpose. The opportunities are great as the service operates in areas which have not previously had any medical facilities.

**Terms:** Six-month appointments with return air fare for one person paid by the service. Salary of £1,000 for the six months period paid in six equal monthly instalments of approximately £166. Fully furnished accommodation provided in Ndola at economic rental.

A second return fare could be loaned to applicant and deducted from salary. Fourteen days holiday.

The posts may interest doctors who have just finished their pre-registration year, or more senior people who would like the opportunity to do some work and research in Zambia, possibly on the basis of leave of absence from their existing U.K. appointments.

Anyone interested is asked to write to:

Dr. James Lawless,  
Flying Doctor Service,  
P.O. Box 1856, NDOLA,  
Zambia.

Interviews will be arranged in Britain or Zambia. (H.5149)

# NOTICES

## THE ABORTION ACT, 1967 APPLICATIONS FOR APPROVAL OF PREMISES (Section 1(2))

The Abortion Act, 1967, requires that any treatment for the termination of pregnancy must be carried out (except in a case of extreme necessity) in a hospital vested in the Minister of Health or the Secretary of State for Scotland under the National Health Service Acts, or in a place for the time being approved for the purposes of section 1 of the Act by the Minister or the Secretary of State. Treatment carried out otherwise than in such a hospital or approved place would constitute an offence under the law relating to abortion.

Proprietors of hospitals not vested in the Minister or the Secretary of State, registered nursing homes and other establishments wishing to apply for approval as places for treatment for the termination of pregnancy under section 1(2) of the Act, should apply immediately, and in any case not later than November 24, 1967, for a form of application, in the case of England or Wales to the Ministry of Health (Room A.414), Alexander Fleming House, Elephant and Castle, London S.E.1, and in the case of Scotland to the Scottish Home and Health Department (Room 313), York Buildings, Queen Street, Edinburgh 2. ST. ANDREWS HOSPITAL  
NORTHAMPTON

President:

Lieutenant-Colonel J. Chandos-Pole, O.B.E.

Medical Director:

James Harper, M.B. F.R.C.P. (Edin.), D.P.M.

This private hospital receives patients, both male and female, suffering from nervous and mental disorders, including alcoholism and senile illnesses. The fees range from eighteen guineas per week. Private rooms with special nurses can be provided, either in the hospital or in one of the villas in the grounds. The hospital is situated in 130 acres of pleasant grounds which provide all recreational facilities. These include a nine-hole golf course, sports ground, tennis courts, etc. A recreation and occupation centre, known as Gloucester House, has been opened recently, which includes an occupational therapy department, a swimming pool, a squash court and a library with an adjoining reading room.

## WANTAGE HOUSE

This is a separate reception unit to which patients may be admitted. It is equipped for the complete investigation of nervous and mental disorders by the most modern methods. All forms of treatment are available.

Charges for treatment at St. Andrew's are allowable for benefit to British United Provident Association and Private Patients Plan subscribers.

For terms and further particulars apply to the Medical Director (Telephone No. 34355 Northampton), who can be seen in London by appointment.

# Nulacin and only Nulacin provides intragastric milk-alkali drip therapy for the ambulant patient

“In view of the ineffectiveness of most of the tableted antacids, the milk-alkali tablet (Nulacin) would appear to be the antacid of choice for ambulatory therapy.”

## Safe, Simple, Effective

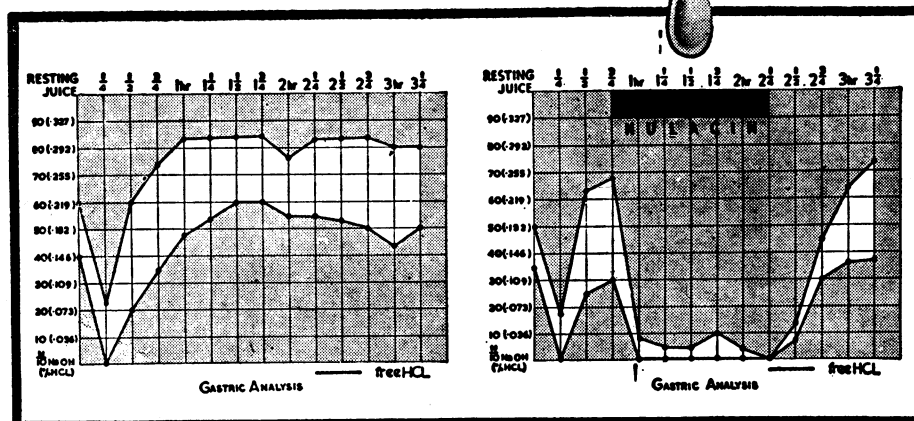

NULACIN TABLETS provide a safe, simple and effective treatment of peptic ulcer.

In treating peptic ulcer a Ryle's tube may be passed through the nose and into the oesophagus and a mixture of milk and antacid allowed to flow continuously over the affected area. This form of therapy can only be employed in those patients who are in bed and for the ambulant patient Nulacin tablets are preferable. Nulacin tablets are prepared from whole milk combined with dextrins and maltose, together with the trisilicate, oxide and carbonate of magnesium and calcium carbonate. Nulacin tablets when allowed to dissolve slowly in the mouth provide milk-alkali drip therapy. In fact, Nulacin tablets have revolutionized the treatment of peptic ulcer.
