### BRONCHITIS

### PENBRITIN

He didn't expect to be back at work so soon. Ten days ago he went down with Bronchitis—his first time off work in years. He's lucky—his was an isolated attack and he can now expect a trouble-free winter. For the Chronic Bronchitic the prognosis is not so good and repeated attacks must be expected.

#### Penbritin is the answer – *first time*

Whether your patient suffers from Acute or Chronic Bronchitis you want your first prescription to be the one which works. You need a broad spectrum antibiotic mainly because of the possibility of *H. influenzae* being involved. (British evidence, <sup>1,2,3,4</sup> shows this to be by far the most troublesome pathogen in Chronic Bronchitis – the "English Disease"). The most active of all antibiotics against *haemophilus* is Penbritin, which at normal dosage achieves bactericidal levels in both serum and lung tissue to ensure a rapid clinical response and minimise the risk of relapse or complications.

Being a penicillin, the dosage of Penbritin may be safely increased in severe illness: in severely disabling bronchitis high dosage Penbritin therapy can achieve bactericidal concentrations in the sputum, eliminating reservoirs of infection and affording the patient unprecedented freedom from infection<sup>1</sup>. Additionally, when more rapid control of infection is imperative, Penbritin may be given by injection.

**In the treatment of Bronchitis, Penbritin is the answer – first time. And so often the only prescription needed.**

#### Bronchitis Dosage:

Children under 2 years: 62.5-125 mg.

2-10 years: 125-250 mg.

Adults: 250 mg.

All dosages q.d.s. a.c.

In severe infections these doses may be increased or Penbritin given by injection.

(High dosage regimen for severely ill Chronic Bronchitics: 1 gram q.d.s.)

**Contra-indication:** Penicillin allergy.

**Side-effects:** As with other penicillins.

**Availability:** Penbritin (ampicillin B.P.):

Capsules, 250 and 500 mg.

Syrup, 125 mg./5 ml.

Syrup Forte, 250 mg./5 ml.

Paediatric Tablets, 125 mg.

Injections, 100 mg., 250 mg., 500 mg.

# ANTIBIOTICS AND THE INTESTINAL FLORA

Treatment with broad spectrum antibiotics suppresses the normal flora, which may be replaced by abnormal resistant organisms causing diarrhoea.

This change can be prevented or reversed by the implantation of *Lactobacillus acidophilus* which has been rendered antibiotic-resistant, and is thus able to multiply freely under these abnormal conditions. The products of growth of the organism are inimical to that of many other bacteria<sup>1,2</sup> and thus contribute to its rapid preponderance over other species.

Oral treatment with antibiotic-resistant *L. acidophilus* in the form of ENPAC has been shown to eliminate *Candida* from the faeces of infants with antibiotic-induced diarrhoea, with relief of symptoms succeeded by rapid gain in weight<sup>3,4</sup> and greatly to reduce the numbers of staphylococci in the faeces of patients treated with tetracyclines.<sup>5</sup>

This new book provides a comprehensive summary of contemporary knowledge. The authors are fully aware of the gaps that exist in present-day understanding of ulcerative colitis, particularly in relation to the aetiology of the disease and its medical management, but their book reflects the substantial increases in knowledge of the course and outcome of the condition under conventional medical treatment, the refinements to surgical techniques, postoperative care, and complications that may occur especially in ileostomy management.

## When the anti-convulsant regimen fails

### -add Benuride for better control

For firm control of grand mal or temporal lobe epilepsy few anti-convulsant drugs are as effective as Benuride (pheneturide). Yet treatment with Benuride is remarkably trouble-free. Twelve years of clinical experience, as reported in over 30 published papers, has confirmed its wide margin of safety and comparative freedom from toxic effects. A change to Benuride means better control—and a brighter, more alert life for your epileptic patient.

Benuride: tablets containing 200 mg. pheneturide. A new comprehensive product booklet, giving up-to-date details of clinical experience, is now available. We shall be pleased to send you a copy, or any other information, on request.

## ADULTS ANTISPASMODIC MIXTURE

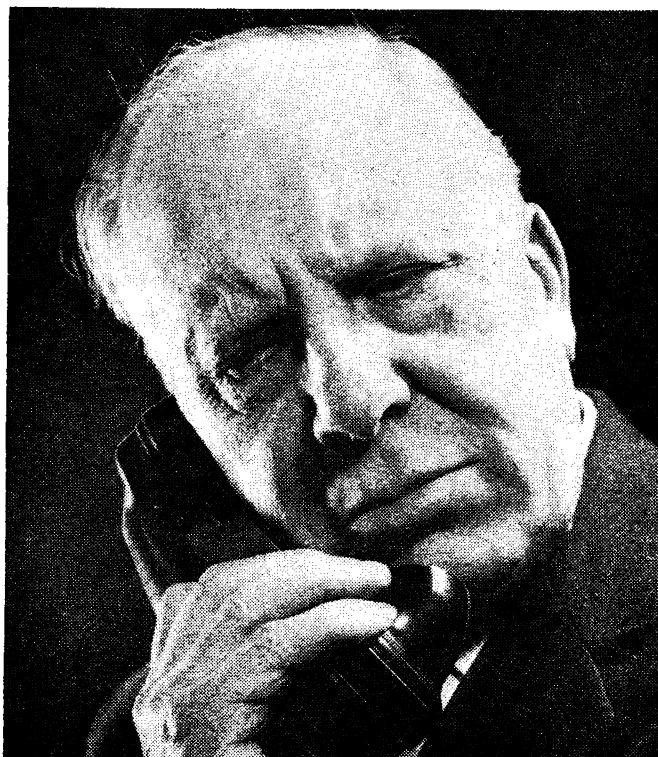

FULL ANTISPASMODIC EFFECT FROM PRACTICAL  
DOSE OF EPHEDRINE-PLEASANTLY FLAVOURED

### FOR asthma and bronchitis

TESTS show that 2-Diethylaminoethyl- $\alpha$ -phenylbutyrate Citrate has a more pronounced bronchodilatory effect than ephedrine. Three parts of 2-Diethylaminoethyl- $\alpha$ -phenylbutyrate Citrate producing the same effect as 5 parts of ephedrine. It acts more rapidly than ephedrine, reaches maximum effect somewhat later and falls away at a slightly slower rate. With a mixture of the substances the curve of bronchial dilation showed that the effect produced was considerably greater than when double the quantity of each substance was administered separately.

4 mg. OF THE MIXED SUBSTANCES  
(CONTAINING 2 mg. OF EPHEDRINE)  
HAS THE BRONCHODILATORY  
EFFECT OF 8 mg. EPHEDRINE

Whilst a full bronchodilatory effect is produced with this mixture, side-effects, such as nausea, restlessness, sweating, etc., due to overdosage or idiosyncrasy to ephedrine are avoided.

## the first broad-spectrum, bactericidal chemotherapeutic agent

### Discovered by Wellcome Research

Trimethoprim is a synthetic antibacterial compound, discovered and developed by Wellcome Research. It is a potent inhibitor of dihydro-folic acid reductase – an enzyme which plays a vital role in bacterial purine synthesis. Trimethoprim thus effectively blocks production of DNA in the bacterial cell.

### Unique bactericidal action

Acting alone, at low concentration, trimethoprim inhibits the growth of a wide range of bacteria. When it is combined with a sulphonamide there is a strong mutual potentiation, giving a bactericidal effect. As the sulphonamide blocks an earlier stage in bacterial purine synthesis the total bactericidal effect may be described as 'sequential double blockade'. This unique mode of action minimises the possibility of bacterial resistance developing.

### Broad-spectrum activity

The combination of trimethoprim and sulphonamide exerts its bactericidal action across a wide spectrum of organisms and is much more effective than either agent alone. Its range of action compares favourably with that of the broad-spectrum penicillins.

### The 'Septin' formula

The most suitable sulphonamide for use with trimethoprim is sulphamethoxazole because it is absorbed, and excreted, at approximately the same rate. The optimum ratio of dosage is 1:5. Each 'Septin' tablet therefore contains trimethoprim 80 mg., sulphamethoxazole 400 mg.

- bactericidal to a wide spectrum of common pathogenic organisms, both Gram-positive and Gram-negative
- effective against particularly troublesome pathogens – *Proteus* species, *E. coli* and *H. influenzae*
- quickly reaches high tissue concentrations, especially in lung and kidney, after oral administration
- rapid and almost complete absorption from the gut avoids disturbance of intestinal flora
- well tolerated by the patient – no significant toxic effects have been observed
- effective against penicillinase-producing organisms – no cross-resistance with other antibacterial drugs has been reported
- can be used in the penicillin-hypersensitive patient
- unlikely to allow development of bacterial resistance – because of its unique mode of action

# Prescribing Information

## SEPTRIN

### Sensitive organisms

'Septrin' is active against the following pathogenic bacteria :  
Gram-positive : *Streptococcus pneumoniae*, *Staphylococcus aureus*, *Streptococcus pyogenes*.

Gram-negative : *Haemophilus influenzae*, *Klebsiella pneumoniae*, *Klebsiella aerogenes*, *Proteus* species, *Escherichia coli*, *Neisseria gonorrhoea*, *Salmonella* species, *Shigella* species, *Bordetella pertussis*, *Vibrio cholera*.

Bacterial resistance to 'Septrin' is unknown. Its effectiveness is unimpaired against bacteria resistant to other chemotherapeutic agents or antibiotics.

### Pharmacology

Absorption by the oral route is rapid, significant plasma levels are obtained within an hour. Peak levels are reached between two and four hours and are maintained over a period of seven hours. Detectable amounts have been found after 24 hours. Tissue concentrations of trimethoprim are higher than the corresponding plasma levels, the lungs and kidneys showing especially high concentrations. Levels in secretions exceed the corresponding plasma concentrations, the only exception being the cerebro-spinal fluid and even there an effective antibacterial concentration is reached.  
40-50% of the ingested trimethoprim is excreted in the urine within 24 hours on normal fluid intake. Sulphamethoxazole is mainly excreted in the urine, 60% in the acetylated form.

### Toxicity

In mice and rats the minimal lethal dose of trimethoprim is approximately 1000 mg./kg. orally and is not increased by addition of the sulphonamide. In chronic toxicity studies of 'Septrin', weight gain and haemopoiesis were depressed at near lethal doses.

A distinct teratogenic effect was found with excessive oral doses (minimal 160 mg./kg trimethoprim) in rats but not in rabbits; the effect was countered by administration of folates. Neither trimethoprim nor sulphamethoxazole possess any significant pharmacodynamic activities in animals or man.

### Indications

The broad-spectrum, bactericidal action of 'Septrin' is valuable in Gram-positive, Gram-negative and mixed infections. It is effective against penicillinase-producing organisms and can be given to patients who are hypersensitive to penicillin. A successful clinical response has been demonstrated in the following conditions:

**Respiratory tract** — acute and chronic bronchitis, bronchiectasis, empyema, lung abscess, lobar and broncho-pneumonia. 'Septrin' is particularly active against *Haemophilus influenzae*.

**Urinary tract infections** — including urethritis, cystitis, pyelitis, chronic pyelonephritis, prostatitis and gonococcal urethritis. 'Septrin' is notably effective against Gram-negative organisms, especially *Proteus*.

**Septicaemia** — particularly striking successes have been shown in septicaemias due to problem organisms resistant to other antibacterials.

### Dosage

Adults and Children over 12 years : Two tablets twice daily. In severe infections a loading dose of four tablets is recommended except in cases with renal failure — see below. In overwhelming infections and septicaemias three tablets twice daily or two tablets three times a day may be given.

Children 6-12 years : Half the adult dose, usually one tablet twice daily.

In cases with marked renal impairment, reduced or more widely spaced dosage is recommended. A satisfactory urine output should be ensured. Ideally, in such patients, dosage should be controlled by regular estimations of blood levels (methods are available on request).

In acute infections 'Septrin' should be given for at least five days or until symptoms have been absent for 24-48 hours. In acute urinary tract infections many authorities advise that treatment should continue for at least 10-14 days because of the danger of sub-clinical or low grade chronic pyelonephritis persisting and leading to permanent renal impairment and its sequelae. In chronic infections the duration of treatment will depend upon response.

Adverse effects have not been reported in long-term prophylactic administration.

### Side-effects and precautions

With 'Septrin' in the recommended dosage no serious side-effects have been reported.

Malaise, nausea and vomiting have occurred with trimethoprim alone, but only when the daily dose exceeded 1 G. which is three times that included in the average recommended dosage. These reactions appear to be of central origin. Rashes have occurred in a few cases. No undesirable haematological effects have been observed in short-term treatment with 'Septrin'. After prolonged administration, some minor biochemical changes and also morphological evidence of alterations in folate metabolism were noted in the granulocytes. However, these changes had no practical implications and with cessation of the drug there was prompt return to pre-treatment levels in all these cases.

The usual caution in prescribing any drug for women of child-bearing age should be exercised with 'Septrin'. The drug should not be given during pregnancy. 'Septrin' is contra-indicated in patients known to be sensitive to sulphonamides.

Care is needed in patients with marked renal impairment (See under Dosage).

### Presentation

'Septrin' brand tablets, each containing 80 mg. of trimethoprim and 400 mg. of sulphamethoxazole.

to heal  
gastric  
ulcers

In most instances gastric ulcers are healed after only 4-6 weeks treatment with BIOGASTRONE. Disappearance of symptoms within 3-4 days of starting treatment is also commonly found. The need for antacid medication is eliminated after a few days.

This remarkably rapid improvement — both objective and subjective — is achieved with BIOGASTRONE because it actually heals gastric ulcers.

# THE EVIDENCE...

A recent article\* gives a guide to the choice of the appropriate oral contraceptive for the individual patient. The observation is made that potency cannot be inferred from milligram dosage. It is also stated that most of the side-effects experienced with oral contraceptives are related to the oestrogen/progestogen balance of the compound and it classifies Lyndiol 2.5 centrally between the most strongly progestogenic and the most strongly oestrogenic oral contraceptives. It is these facts which constitute the basis of Organon's claim that Lyndiol 2.5 is a truly low-dose oral contraceptive and is a truly well-balanced preparation.

\*'Today's Drugs'.  
Brit.med.J., 1, 690 (1968)

Further support for the suitability of Lyndiol 2.5 in the majority of patients comes from the first randomised double-blind crossover trial conducted on a number of oral contraceptives\*\*. The study, which made detailed comparisons between 4 leading oral contraceptives in 1673 cycles of therapy, and which confirmed that Lyndiol 2.5 has only minimal side-effects, is a further aid to the selection of a suitable oral contraceptive.

'Periactin' induces a marked improvement in the appetite of many patients. The resulting weight gain is due only to the increased food intake—there is no disturbance of endocrine function, no evidence of fluid retention.

'Periactin' does not reproduce the effects of 'tonics', haematinics or vitamins. 'Periactin' acts promptly, and its dosage is simple.

'Periactin' will be invaluable for many of those situations in which patients, adults and children, require food and yet have no appetite for it.

bethanidine sulphate

A recent 2½-year study<sup>1</sup> has confirmed that 'Esbatal' (bethanidine sulphate) provides a more acceptable form of therapy for the patient than other antihypertensive drugs in current use. Control of blood pressure was achieved with 'Esbatal' in about three-quarters of the hypertensive patients treated—and side-effects were rare.<sup>1</sup> In comparing 'Esbatal' with guanethidine and methyldopa the authors considered that 'Esbatal' was to be preferred for beginning treatment in any new hypertensive patient.<sup>1</sup> Better acceptance of 'Esbatal' by the patient, again compared with guanethidine and methyldopa, was also demonstrated in another trial where 'Esbatal' scored the highest rating for patient preference.<sup>2</sup>

# Glaxo brief

There's no mistaking  
Glaxo's new  
oxytetracycline—each  
tiny tablet says  
**Clinimycin**

Clinimycin is the only oxytetracycline with its brand name on the tablet. You'll know what treatment is being given when patients 'run out of those tablets'. And they can't confuse Clinimycin with any other tablets taken simultaneously.

Clinimycin is also the smallest oxytetracycline 250 mg tablet. Clinimycin Tablets are so small and slip down so easily that even a child can swallow them. Any taste stays well behind the film coating.

Good reasons to prescribe Clinimycin always — they are among the least expensive of the branded oxytetracyclines.

**Betnovate** remains  
unrivalled among  
topical corticosteroids

The first proof that in the treatment of psoriasis and eczema, " . . . a better response is more likely with betamethasone 17-valerate (Betnovate) than with . . . other corticosteroids, came in the massive dermatological trial in 1964. Since then, comparisons between betamethasone 17-valerate and the latest corticosteroids, have confirmed that the overall superiority of Betnovate remains unchallenged today.<sup>2,3</sup> They have shown that the scope of Betnovate extends to all steroid-responsive dermatoses. It exerts a faster, more complete clearance in relatively responsive dermatoses, and often resolves those that have resisted treatment with other topical corticosteroids.

Betnovate "closely approaches the criteria of the ideal topical corticosteroid."<sup>3</sup>

## What makes new **Betnovate Rectal Ointment** so unique?

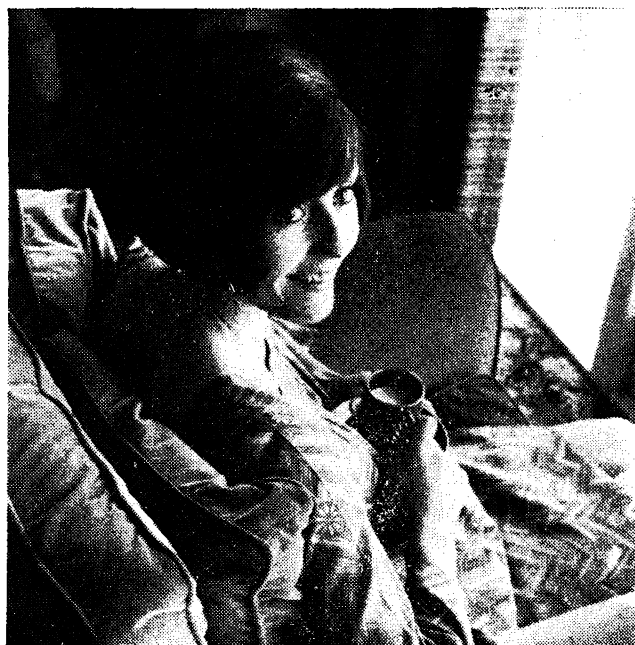

Its supreme effectiveness and lowest cost compared with other corticosteroid-containing rectal ointments. Betnovate Rectal Ointment contains 0.05% betamethasone 17-valerate — the most successful topical corticosteroid. Betamethasone achieves a faster and more complete clearance in relatively responsive conditions and also succeeds when other topical corticosteroids fail. The local anaesthetic lignocaine hydrochloride 2.5% is added to give rapid relief of pain. Also included is the decongestant phenylephrine hydrochloride 0.1% to constrict swollen blood vessels, to shrink inflamed mucosa and to prolong the effect of the local anaesthetic. The specially designed applicator and the low viscosity base ensure easy application.

Betnovate Rectal Ointment is the least expensive corticosteroid-containing rectal ointment. Now for less cost, you can prescribe the most effective preparation available.

## During convalescence a cup of **Complan** a day helps speed recovery

During illness or convalescence nutritional needs are increased yet appetite is nearly always poor. The patient cannot face large, bulky meals. This is why a cup of Complan at least once a day is so valuable. Complan contains all the essential nutrients, vitamins and minerals, needed for complete health. And yet it can be taken as a light, easily digested drink that is acceptable to even the most fastidious patient. These are good reasons why your patients should have at least one cup of Complan a day — it helps speed recovery.

A morning's surgery  
brings a lot of  
**Crystapen G** patients

How many patients needing antibiotics do you see in a morning? Whatever the number, there is a strong case for using penicillin. It is still the drug of choice in so many infections. An established penicillin in a modern form is Crystapen G (penicillin G) — one you can rely on in the treatment of strep. throats for example.<sup>1</sup> And Crystapen G is as effective clinically as the more expensive penicillin V.<sup>2</sup>

All Crystapen G Tablets are printed with their full name and strength on them. They are film-coated, tasteless and even easier to swallow than the old sugar-coated tablets. Specify Crystapen G Tablets — 250 mg for adults and 125 mg for children. When your patients need oral penicillin, you can rely on Crystapen G.

Crystapen G Tablets 125 mg and 250 mg:  
bottles of 100 and 500

**Crystapen G Syrup**  
gives twenty effective  
doses in one bottle

In each 100 ml size bottle of Crystapen G 250 mg/5 ml there is sufficient for twenty adult doses — five days' continuous therapy at normal dosage. Also in a five-day bottle is the 125 mg/5 ml Crystapen G Syrup. The pleasant fruit flavour appeals to young and old alike. Crystapen G's five-day bottles are in tune with modern thinking that most penicillin-sensitive infections need five days' therapy while strep. throats need ten. Specify Crystapen G Syrup when the patient "doesn't like tablets" — 250 mg/5 ml for adults, 125 mg/5 ml for children.

With '125' and '250' syrups and tablets Crystapen G makes good therapy easier — only one name to remember.

# INDUSTRIAL APPOINTMENTS

# Flight Medical Officer

The Air Corporation's Joint Medical Service provides a comprehensive occupational Health Service for BEA and BOAC and includes groups dealing with Aviation Medicine, Industrial Medicine and the care of Overseas Staff.

A vacancy will shortly exist for one Flight Medical Officer who will be based at Heathrow Airport. This appointment is suitable for a young man who is seeking a whole-time career in Aviation medicine with a particular interest in the care of flying staff. In addition, there will be opportunities to take part in aviation medical research projects as they occur from time to time. Previous experience in aviation medicine in the Royal Air Force or Royal Navy would be an advantage but is not essential. The preferred age range is up to 35 years.

Candidates must be medically registered in the United Kingdom. Salary will be within the B.M.A. Medical Officer scale, and the starting point will be fixed according to age, qualifications and experience. There is an excellent contributory pension scheme and opportunities exist for overseas holiday air travel.

Closing date January 3.

Write, giving details of age, experience and qualifications to:

Manager, Selection Services,  
BOAC, PO Box 10,  
Heathrow Airport—London,  
Hounslow, Middlesex.

# MEDICAL ADVISER

We wish to appoint an additional Medical Adviser to our Research Department. This post represents an interesting and challenging opportunity to become a member of a team engaged upon research in a number of important therapeutic fields.

The successful applicant will have his own specific areas of responsibility with scope for initiative and original work. He will principally be concerned with initiating and progressing clinical trials of research-based compounds in the U.K. The work will involve some travel and attendance at meetings and conferences.

Applications are invited from male registered practitioners, desirably in the age bracket 30-40 years: they will preferably have had both hospital and general practice experience, with clinical pharmacology an additional advantage.

The starting salary is negotiable, but will reflect qualifications and experience; contributory pension and profit-sharing schemes apply. Candidates are invited to write in the first instance to:

The Personnel Manager, Boots Pure Drug Co. Ltd.,  
1 Thane Road West, Nottingham NG2 3AA.

**Upjohn**

Medicine . . . designed for health . . . produced with care

# Medical Adviser

**The development of new products from in-company research, together with continuous growth of established products, calls for the addition of a further physician to the Medical Division of Upjohn Limited.**

The man appointed will probably be under forty years of age. He will hold a British Medical Qualification and will have a sound postgraduate experience in hospital or in general practice. His responsibilities will include the establishment and follow-up of a programme of clinical evaluation for both new and existing products, and will involve liaison with physicians and surgeons in teaching hospitals. An interest in therapeutics and in clinical pharmacology will therefore be essential, although previous

experience in the pharmaceutical industry will not be regarded as essential.

The position is one of considerable responsibility and the salary, which will be reviewed annually, is negotiable according to experience. The conditions of service include non-contributory life assurance, a superannuation scheme, and the provision of a company car. The successful candidate will report to the Medical Director at the company's headquarters in Crawley, Sussex.

Applications, which will be treated as strictly confidential within the company, should be forwarded together with a curriculum vitae to:

# Who's afraid of

# Mycoplasma?

Does it exist? Do you ever come across it – except in the journals? Is it a genuine cause for concern or merely a fashion fad of little consequence? Many are sceptical! Since the organism is so difficult to identify early on and is recognised in such a small proportion of patients – why even consider it? On the other hand the increasing amount of published evidence now associating Mycoplasma with various infections, pneumonia,<sup>1,2</sup> bronchitis,<sup>3</sup> even non specific urethritis,<sup>4</sup> makes one aware that at least some consideration must be given to the question.

## Whatever your answer Ledermycin gives the coverage

Broad enough to cope with both the 'ordinary' and the 'extraordinary' infections, ranging from pneumococcus to Mycoplasma.

Simple in dosage to facilitate patient's adherence to dosage schedule – eg 300 mg b.d.

Effective – so that both doctor and patient may be confident of good results.

## NEW SOUTH WALES INSTITUTE OF PSYCHIATRY

### Research Fellow in Psychiatry

A Research Fellowship of the New South Wales Institute of Psychiatry is offered to the successful applicant for the position of Research Psychiatrist to the "Human Ecology of the Arid Zone" project. The duration of the Fellowship is for one year with a possible renewal for a further year. The project affords an opportunity to undertake the first psychiatric epidemiological study of the sparsely populated regions of Australia and to determine the modifications of psychiatric services needed for such regions.

#### Salary

The successful applicant will be entitled to a grant at the rate of \$A8,359 per annum.

#### Qualifications

The applicant should be a registered medical practitioner and possess a qualification in Psychiatry.

#### Duties

This is a challenging opportunity to carry out psychiatric research, to work towards a higher degree and to obtain unique experience in a field of vital importance for the development of health services in Australia.

The Research Psychiatrist will work in collaboration with a Social Psychologist already appointed, with the General Practitioners of the area and with the Directors of the project, Professor L. G. Kiloh, Professor of Psychiatry, University of New South Wales, Professor D. C. Maddison, Professor of Psychiatry, University of Sydney, Professor J. E. Cawte, Associate Professor of Psychiatry, University of New South Wales, and Dr. W. A. Barclay, Director of State Psychiatric Services, New South Wales, each of whom will visit the project to direct specific aspects.

The town of Cobar and its surrounding area in the west of New South Wales has been chosen as the region to be studied. This includes pastoral properties, a mining industry and an aboriginal population. Funds are available for transport by car and for approved visits to Sydney for consultation. A house is available on a rental basis.

Subject to certain conditions, the successful applicant will be eligible for:

- \* Payment of fares to Sydney
- \* Financial assistance towards removal and establishment expenses.
- \* Financial assistance towards initial accommodation expenses.

For application form and further information, write to the Recruitment Section, New South Wales Government Offices, 56 Strand, London, W.C.2., where applications close on 6th JANUARY, 1969, quoting reference 44/396.

**ST. ANDREW'S HOSPITAL  
NORTHAMPTON**

Medical Director:  
James Harper, M.D., F.R.C.P. (Edin.), D.P.M.

St. Andrew's Hospital is a private psy-  
chiatric hospital situated in 130 acres of  
parkland in the county town of Northamp-  
ton. In general, patients are admitted to  
Wantage House, a reception unit in the  
grounds, which is equipped for the investi-  
gation and treatment of all forms of mental  
and nervous illness. In addition, there is  
accommodation mainly in private rooms,  
both in the main hospital and in various  
villas, for longer stay patients and geriatric  
patients.

The hospital's amenities include Gloucester  
House, which comprises an occupational  
therapy department, swimming-pool, a  
squash court and library, while in the  
grounds there are tennis courts, a nine hole  
golf course, etc.  
Fees range from 25 guineas per week, and  
charges for treatment at St. Andrew's Hos-  
pital are allowable for benefit to British  
United Provident Association and Private  
Patients Plan subscribers.  
Further particulars can be obtained from  
the Medical Director, St. Andrew's Hospital,  
Northampton (Tel.: Northampton 34354),  
who can be seen in consultation by appoint-  
ment, either at the hospital or at 55 Harle-  
Street, London W.1.

# OROVITE

## HELPS HIM FIGHT BACK

And fight back he must.  
Surgery and antibiotic therapy are good  
strong corrective measures—but what he  
needs now is a prompt build-up of reserves.  
In fact he needs Orovite.

Orovite is not merely a vitamin supplement—  
it is a therapeutic dose of all the essential  
vitamins needed to correct body metabolism.  
It has been found extremely useful in treating  
confusional states that so often follow oper-  
ations and illness in older patients. And  
specially for these patients, it is available as  
easy-to-take, pleasant-tasting Orovite Elixir.

**Contents:** High potency  
vitamin B complex and vitamin C.

**Dosage:** *Adults:* 1-3 tablets daily, or 1-3 teaspoonfuls Elixir,  
3 times a day.

*Children:* 1-2 teaspoonfuls Elixir, twice a day.

The dose can be varied to suit the needs of the patient.

Acute cases should be treated parenterally, with Parentrovite.\*

**Contra-indications and Side-effects:** None at the  
recommended dosage.

Further information is available on request.

**Orovite\*** is one of the range of Bencard vitamins.
