## Betnovate-N and C Creams classic answers to moist infected dermatoses

### A simple case for low-cost Betnovate-C Cream

Left : eczema of thumb with recent secondary infection.  
Right : after a week's treatment with Betnovate-C Cream under gauze dressing.

#### Betnovate-N and Betnovate-C

##### Presentation

Betnovate-N Cream (0.1% betamethasone as 17-valerate plus 0.5% neomycin sulphate) in 15, 30 and 100 gram tubes  
Betnovate-C Cream (0.1% betamethasone as 17-valerate plus 3% clioquinol) in 15, 30 and 100 gram tubes

##### Indications

All steroid-responsive dermatoses including psoriasis.  
Betnovate-N preparations should be used if bacterial infection is present or suspected. As an alternative or when there is fungal infection, Betnovate-C preparations may be used.

##### Application

Apply a small quantity once or twice daily.

##### Adverse reactions

Betnovate preparations are usually tolerated well but if signs of hypersensitivity appear, application should be stopped immediately. When used with occlusive dressings on extensive areas, or for prolonged periods, as with all topical steroids, there is a possibility of systemic absorption.

Absorption is more likely in infants and children, and may occur even in the absence of occlusion.  
When using Betnovate-C preparations, cover lesions with a dressing to protect clothing.

## The cleaner. A rash young lady?

No. Just prone to urticaria. 'Banistyl' clears up her rash because it is a potent antihistaminic - it lets her keep working because it has minimal sedative properties.

"Dimethothiazine is clearly to be considered when one is faced with an itching irritation of the skin which is going to take a week to subside, during which time the patient has to continue working. It is possible that one might consider this drug as one of the best for daytime use . . ."

*Practitioner, 198, 834, 1967.*

'Banistyl' is supplied as tablets containing the equivalent of 20 mg. dimethothiazine base (as mesylate), elixir containing the equivalent of 10 mg. dimethothiazine base (as mesylate) per 5 ml.

Up to 90% of patients respond to Ismelin. Steady, continuous effectiveness gives reliable long-term control

**"Dosage should be simple and easily regulated"**

Control with Ismelin is often adequate on just 2 tablets daily. Dosage is flexible, adjustment simple

**"It should be free from hidden effects and it should be reasonable in price"**

## Ismelin® meets your standards

guanethidine sulphate BP

**Dosage**

Initial dosage—two 10mg tablets daily. Frequent adjustment is unnecessary during stabilisation; depending on individual assessment, intervals between consultations may be up to one month. Should 20mg daily prove insufficient, increase daily dosage by one 10mg tablet. As the action of Ismelin is gradual and prolonged, allow at least one week before any increase, to observe full effect. The majority of patients will be symptom-free and adequately controlled on 40mg daily or less.

**Prescribing notes**

Ismelin is contra-indicated in the presence of phaeochromocytoma. Side effects attributable to postural hypotension normally reflect overdosage. Patients should be advised to avoid sudden changes of posture, or violent exertion, and if morning faintness on rising persists, to reduce the daily dosage by one 10mg tablet until the next consultation. If diarrhoea is troublesome, reduce or divide dose, or add  $\frac{1}{2}$ gr. codeine phosphate t.d.s. Failure of ejaculation

has been reported and, rarely, exertional dyspnoea, nasal congestion, shivering, muscle weakness, paraesthesiae (due to latent cerebral arterial insufficiency), aggravation of intermittent claudication, and exacerbation of peptic ulcer. In heart failure, any tendency to fluid retention may be increased. As with any antihypertensive, prescribe cautiously for patients with renal failure and urea retention. Allowance should be made for the antagonistic pressor action of some antidepressants (MAOI), appetite suppressants and stimulants of the amphetamine class if administered concurrently.

10 and 25mg tablets guanethidine sulphate BP, in 100's and 500's. Basic NHS price 100 x 10mg: 27s. 8d. Also ampoules for i.m. injection 10mg in 1ml. Basic NHS price 6 amps: 17s. 4d.

# UROLOGY AND NEPHROLOGY

This new international quarterly carries original papers, clinical and experimental—not published before—in the fields of urological surgery, nephrology and andrology. Thus not only classical urology but the questions of haemodialysis, treatment of chronic and acute renal insufficiency, renal transplantations, sterility in men, and sexology will also be covered.

UROLOGY AND NEPHROLOGY is published in four issues amounting to a yearly volume about 500 pages.

The invisible wedge  
that helps  
correct flat feet...

Do you recommend an external wedge? Those outside wedges soon wear away, and very often the child is made to feel self-conscious because his shoes look different from other children's. They also disturb the plane of forepart and heel. Surely it's more logical to have a wedge built in between the inner and outer sole where it remains invisible and completely unaffected by wear or repair of the shoe. That is how Start-Rite INNERRAZE shoes are made—on remedial lasts specially adapted to accommodate the internal wedge. That is why they are the only practical and thoroughly effective solution to this problem. Information from Mr. C. James, Fitting Consultant, Start-Rite Shoes Ltd., Cromer Road, Norwich, NOR 60A.

Some people can accept, or even enjoy, a high degree of tension in their lives, but others respond with severe anxiety or agitation when faced with much less challenging situations.

In patients suffering from severe tension and anxiety, particularly where agitation is present, FENTAZIN—perphenazine BP—has been proved over many years to be an efficient tranquilliser which seldom causes sedation or interferes with mental acuity.

(Ninth Edition)

The continuing popularity and wide acceptance of this classic text is directly attributable to the extensive, accurate coverage afforded every topic. In this ninth edition, two eminently qualified new co-editors and a number of new contributing authors join Dr. Nelson in revising and updating this established pediatric guidebook.

The section on The Oral Cavity has been completely rewritten and extensive revision and expansion of material is evident in the sections on: Pre and Postoperative Care—Inborn Errors of Metabolism—Immunology—Cardiology, Rheumatic Fever—Blood—Disorders of Communication—and the Liver.

(Third Edition)

When the first edition of this book was published as Hinshaw and Garland in 1956, the authors noted that the need for such a volume was a result of rapid improvements in the diagnosis and treatment of chest diseases. The relentless march of medical progress also constitutes the reason for this revision; while only a few brand new topics are covered, there are new approaches to the diagnosis and therapy of many different disease entities. Dr. Hinshaw is a practising chest physician who is able to draw on nearly 40 years of clinical experience in compiling this new edition.

## NEW PRODUCT ANNOUNCEMENT

# Duphalac ends the laxative era

---

**Patients with habitual constipation keep taking a laxative, and doctors reluctantly accept the necessity to prescribe them. Now this is about to change. Duphalac ushers in a new era in the management of habitual constipation – the non-laxative era. Because Duphalac is a non-laxative treatment which effects a physiological reconditioning of the bowel**

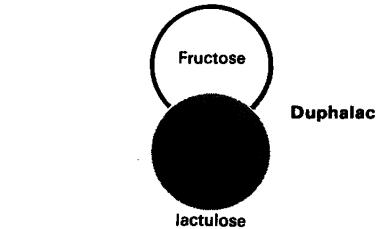

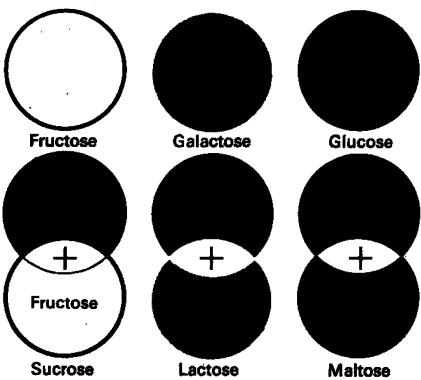

---

## NEW PRODUCT ANNOUNCEMENT

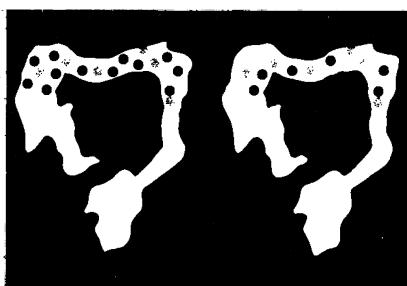

**A New Way with  
Habitual Constipation**

Unlike traditional laxatives, which goad the bowel musculature into sporadic action, Duphalac has no direct effect either on the smooth muscle or its innervation. It changes the colonic environment within the colon, which results in normal bowel movement and a softening of the stool. **Like a spoonful of sugar...**

It has long been recognized that in infants a diet containing too much protein in relation to carbohydrate may give rise to obstipation with a characteristic appearance of the stool. This may usually be corrected by adding extra sugar to the baby's food. The gastrointestinal tract of the older patient has become accustomed to a wide variety of dietetic abuses. It is the lucky patient whose constipation is corrected by a spoonful of sugar. Like sugar, lactulose (the active principle of Duphalac) is a disaccharide, but unlike sugar it is a synthetic compound which is not appreciably absorbed after oral ingestion because the enzymes responsible for hydrolyzing disaccharides in man do not effect it. The result is that all of the administered dose reaches the colon unchanged and just like the spoonful of sugar in the infant — effectively relieves the constipation.

**Changing the Balance of Gut Flora**

Most of the flora normally resident in the colon fall into one of two main groups: the saccharolytic bacteria such as lactobacilli, and proteolytic bacteria such as Proteus. Saccharolytic bacteria use carbohydrate as nutrient and tend to lower pH in the gut because they produce lactic and other acids. The proteolytic bacteria break down proteins to amines and ammonia, thus tending to make the pH alkaline. Duphalac serves as a nutrient for the saccharolytic bacteria and thus encourages them to increase their activity, giving rise to a fall in pH of the colonic contents and a marked change in the stool consistency. In clinical terms, the stool becomes softer and the natural peristalsis is restored.

**N.B.** It should be noted that the physiological reconditioning brought about by Duphalac takes up to 48 hours to produce a normal motion.

**The Patients for Duphalac**

Duphalac is especially indicated for those patients whose chronic constipation results from a way of life they cannot, or will not, change. Typical of these sufferers from "habitual constipation" are

**the young girl** working in a busy office with a hectic social life and no time for leisure over meals — or for a regular bowel routine.

**the elderly patient** who cannot be bothered to answer the call to stool and who thus loses the bowel habit.

**the busy executive,** overworked, always in haste, who cannot allow the time or the tranquillity for proper bowel function

**the child** with a thousand and one preoccupations which override all but the most urgent calls of nature

Duphalac is presented as a syrup containing lactulose 50% w/w, lactose 5%, galactose 8%, in bottles of 200 ml. and 2 litres.

Full prescribing information will be supplied on request.

# An 'up-to-date' measurement of obesity

To consider the definition of obesity as being synonymous with overweight is incorrect. The continued use of height-weight tables to designate underweight/overweight is a retarding influence on the accumulation of knowledge regarding obesity and is subject to severe limitations.

Weighing a person does not differentiate between individual variations in body composition, build or structure. It is possible for some people to be obese without being overweight and vice versa.

In reality one is trying to assess the degree of fatness as the criterion of obesity and this should be based on direct measurement, not on inferred values from weight.

It is surprising that, although skin-fold measurement was first suggested in 1890 and has been used in clinics for several decades, skinfold measurements are not in general use.

The measurement is quick, simple and reproducible. Evaluation of fat density from skinfold thickness measurements correlates well with values obtained from other more elaborate methods.

With the free availability of simple skinfold calipers, Selpharm Laboratories Ltd. hope that this measurement will become a routine diagnostic test for obesity and as a result more knowledge will be gathered on this widespread disease.

There is a close negative correlation between skinfold thickness and muscle glucose uptake. Skinfold thickness is a simple and accurate measurement to enable the degree of obesity to be determined.

The Ponderax skinfold calipers are designed to facilitate the diagnosis and classification of obesity. They act as a guide to the dosage of Ponderax required to restore metabolic equilibrium in the patient.

# What are *Nacton forte* conditions

The symptoms suggest a peptic ulcer—your patient has chronic epigastric pain associated with food. He worries—and he smokes too much. You'll refer him for radiological examination, meanwhile you'll want to control that persistent pain.

Sometimes radiological examination fails to confirm the ulcer—but your patient still has all the symptoms: dyspepsia associated with food, interrupted sleep. The pain continues and antacids only give temporary relief.

Then there are the relapsed cases. The patient who thought his ulcer was healed, now he's back with all the old symptoms—he leads a miserably restricted life and he's beginning to think the pain is a life sentence.

## These are *Nacton forte* conditions

Nacton forte—a new presentation from Bencard—provides the most convenient, effective dose of poldine methylsulphate B.P. (4 mg.) in a single tablet.

**Nacton forte:**

\* Controls pain at source by continuously reducing gastric acid secretion.

- \* Eliminates routine need for antacids.
- \* Leaves the electrolyte balance of the body undisturbed—so supplementary therapy is not required.
- \* Will not induce side-effects in the majority of patients

# Glaxo do-with their new 125mg 5ml oxytetracycline syrup

Clinimycin Syrup is the ideal way of giving oxytetracycline to the very young and the elderly patients. The syrup has a pleasant fruit flavour and provides a uniform suspension which ensures accurate dosage every time. Clinimycin is one of the least expensive oxytetracycline syrups and its orange colour makes it readily identifiable. Quite a few good reasons for remembering Clinimycin Syrup when prescribing for your very young and elderly patients. Of course, if you feel that tablets are the answer, Clinimycin tablets are still among the smallest and least expensive of oxytetracycline tablets available.

## effectiveness matters most -but Haelan offers more

**Haelan** certainly is effective—it contains flurandrenolone, one of the most powerful steroids for topical use. Haelan has the right concentration of flurandrenolone (0.0125%) to resolve most steroid-responsive skin conditions without undue risk of systemic side effects. But there's more to Haelan than that.

Because flurandrenolone is so active, Haelan provides an ample quantity of base for easy application, and the big 60G (2 oz) tube is large enough to treat the average patient without the need for repeat prescriptions. Last, but by no means least, Haelan, at less than 2½d per gramme is clearly economical.

Long-acting 'Stelabid', with its comprehensive therapeutic action, ensures swift and prolonged relief of distressing local symptoms in a wide range of gastro-intestinal disorders, and particularly in peptic ulcer. 'Stelabid' reduces gastric hypersecretion, prevents nausea and vomiting, inhibits hypermotility and relieves painful spasm through-

out the gut. At the same time, 'Stelabid' exerts a beneficent calming action which effectively allays the background stress and worry that so often provoke or aggravate such conditions. A single dose of 'Stelabid' protects the patient for 12 hours – a useful advantage during the working day – and to ensure an undisturbed night's sleep.

# BRUFEN

(ibuprofen)

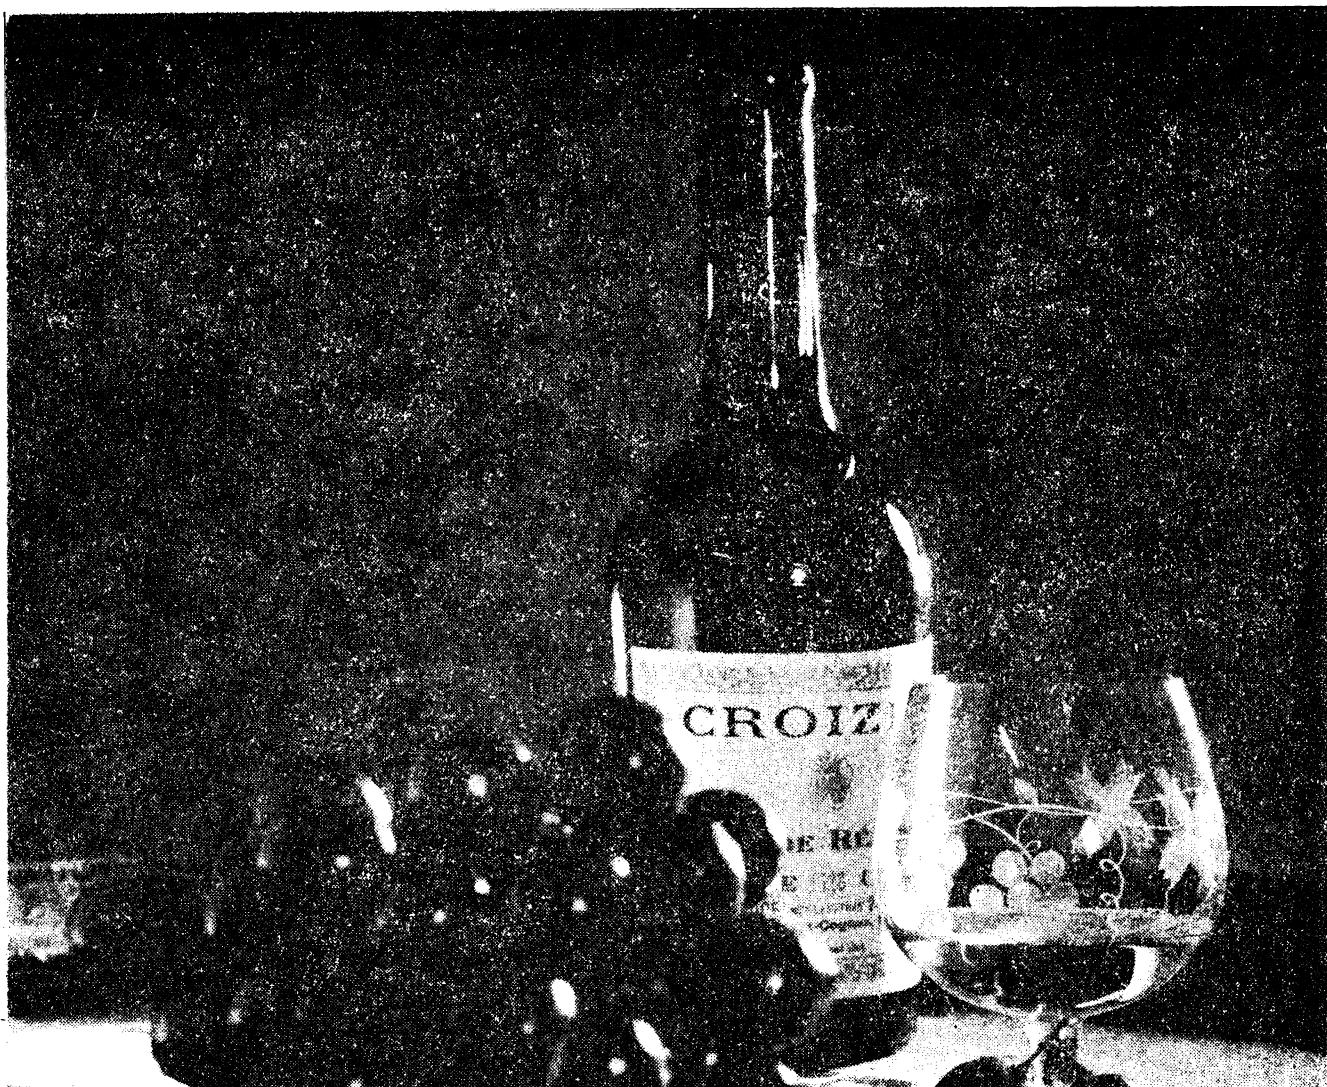

The incident recreated here is taken from an actual report of the results achieved with Brufen. Many such reports about Brufen have been received, and provide convincing evidence of the very real benefits which this highly effective antirheumatic agent can bring to the arthritic. To those restricted by an arthritic condition, Brufen means the freedom of reduced stiffness,

improved joint flexion and an extended range of pain-free movement. There is also a remarkable freedom from adverse effects, and Brufen is so well tolerated by the gastro-intestinal tract that the first dose of each day can be taken on an empty stomach, as soon as the patient is awake.

Brufen is ibuprofen, the first non-steroidal antirheumatic agent evolved entirely by British research.

## 'Saluric' can help in the premenstrual syndrome

Far too many women have to suffer the tiresome symptoms of premenstrual tension with oedema. Every month this may last for 7 to 10 days before the menses. Because many of the distressing symptoms may be directly related to fluid retention, effective diuresis usually brings prompt relief. 'Saluric' has been proved by 10 years' clinical use to be a dependable diuretic.

- 'Saluric' can relieve breast tenderness, and leg and abdominal swelling
- 'Saluric' may well help to alleviate the concomitant irritability and nervousness
- 'Saluric' is an established treatment for many other types of oedema

Supplied as tablets containing 500 mg chlorothiazide. Detailed information is available to physicians on request. 'Saluric' is a registered trademark.

# PRIMOJEL

a new, quick-acting  
disintegrating agent  
for the tabletting industry.

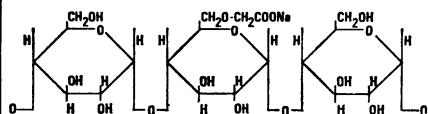

PRIMOJEL, one of the newest developments from the SCHOLTEN laboratories, is a disintegrating agent for the pharmaceutical tabletting industry, possessing a very active effect.

PRIMOJEL is a low-substituted carboxymethyl-starch which dissolves particularly quickly in water. As a result of this unique property, the cohesion of a tablet in which PRIMOJEL has been incorporated is quickly and completely destroyed when brought into contact with water. An addition of only a small percentage of PRIMOJEL to the granulate confers, in most cases, a remarkable reduction in the disintegration time. A further important point is that prolonged storage of the tablets does not affect the activity of the PRIMOJEL.

Further information, samples or technical literature are available on request.

As a Medical Officer in the Navy you pack a lot of experience into your first 5 years.

If you want to see something of the world join the Royal Navy as a Medical Officer for a 3-5 year commission—or longer. Travelling abroad, you get first-hand experience of cases you rarely encounter at home, as well as plenty of good, solid, family G.P. experience (including midwifery) looking after families on shore, and working in Naval hospitals.

**Freedom of treatment and first class facilities.**

As a Medical Officer you have your own general practice afloat, full responsibility and the chances to study cases in greater depth. You can also learn sciences special to the Navy, such as underwater and nuclear medicine.

This is the sort of experience you will only get in the Navy and if you like it you may stay on. After all, ordinary G.P.s don't usually have cruising surgeries, or use helicopters for emergency dashes.

**How you can join.**

*As a student any time after passing 2nd M.B. If accepted for a five year commission, you will start at £821 plus allowances (and there's a tax free gratuity of £3,000 at the end).*

*Any time from your pre-registration year onwards. You may join for a 3 or 5-year Short Service commission—which can be extended if you so wish. As a fully registered doctor, your civilian experience counts towards your seniority.*

Write for more information giving age and qualifications, and we'll be glad to arrange an interview.

# Medical Officers

The Anglo American Corporation Group Medical Service wishes to strengthen its staff of medical officers in South Africa. Its several hospitals are outstandingly well-equipped and serve many thousands of African employees.

In addition to the normal work common to all hospitals for men, the Group's medical officers supervise the health, housing, nutrition and general welfare of the employees, and also assist in maintaining the high standards of public health on the mines. They can further expect to have opportunities of gaining invaluable experience in traumatic surgery.

A starting salary in the range £3,780-£4,375 p.a. is offered. Income Tax is considerably less than that paid in U.K., and

commodities in general cost noticeably less. A spacious detached house is provided at a rental of approximately £6 a month. There are excellent pension and health schemes. In all centres there are facilities for at least the popular games including golf and tennis—and time to play them. Help in the house is readily obtainable and moderately inexpensive. The South African climate is acknowledged to be one of the most congenial and healthy in the world.

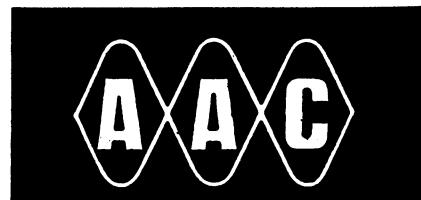

Air fares to South Africa for employees and their families are paid for *in toto* by the Group and generous assistance is given towards the cost of moving baggage and possessions.

The Anglo American Corporation with its associated groups, including De Beers, forms

the largest single concern in South Africa. It has interests outside South Africa too, and has a reputation for progressive policies in regard to the welfare of its African and European employees.

## Overseas—contd.

**ALFRED HOSPITAL**  
Commercial Road  
Prahran, Victoria, Australia  
**THE QUEEN VICTORIA MEMORIAL HOSPITAL**  
172 Lonsdale Street, Melbourne, Victoria, Australia

Invite applications from qualified medical practitioners holding a postgraduate surgical qualification for the undermentioned appointments.

1. The joint appointment of  
**PAEDIATRIC SURGEON**  
to Alfred Hospital (half-time paid) and  
**ASSISTANT PAEDIATRIC SURGEON**  
to Queen Victoria Memorial Hospital (one session paid)

2. The separate appointment of:  
(a) **PAEDIATRIC SURGEON**  
to Alfred Hospital (half-time paid).  
(b) **ASSISTANT PAEDIATRIC SURGEON**

to Queen Victoria Memorial Hospital (one session paid).

The duties of Paediatric Surgeon to Alfred Hospital involve general paediatric surgery in a 43-bed children's ward shared with Paediatric Physicians and other specialists, two outpatients' sessions and student teaching. The scope of the work includes some neonatal problems and a large volume of traumatic and general paediatric surgery.

The Assistant to the Paediatric Surgeon at Queen Victoria Memorial Hospital would share the emergencies, assist at major operations (this work would include neonatal surgery) and in the teaching of medical students.

Salary for the Alfred Hospital appointment will be within the range \$4,333-\$5,327, and for the Queen Victoria Memorial Hospital appointment, one session per week at the rate of \$1,232-\$1,332 per annum.

The joint appointment of  
**ASSISTANT PAEDIATRIC SURGEON**  
to Queen Victoria Memorial Hospital and  
**ASSISTANT PAEDIATRIC SURGEON**

to Alfred Hospital.

In the event of a decision to appoint a Paediatric Surgeon to position 2(a) only, it is envisaged that appointments 2(b) and 4 may be held by the one applicant. Applicants should therefore include this alternative in the order of preference.

4. **ASSISTANT PAEDIATRIC SURGEON**

to Alfred Hospital (sessional).

This position will become available in the event of one of the present Assistant Paediatric Surgeons at Alfred Hospital being appointed to either of positions 1 or 2(a). The number of sessions available for this position will be subject to discussion, and the salary will be in accordance with the scale of medical salaries as laid down by the Hospital's and Charities Commission.

Alfred Hospital is an acute general hospital of 444 public beds, 37 private and intermediate general medical and surgical beds, and 20 medical and intermediate maternity beds. **ST. ANDREW'S HOSPITAL NORTHAMPTON**

Medical Director: James Harper, M.B., F.R.C.P.(Edin.), D.P.M.

St Andrew's Hospital is a private psychiatric hospital situated in 130 acres of parkland in the county town of Northampton. In general, patients are admitted to Wantage House, a reception unit in the grounds, which is equipped for the investigation and treatment of all forms of mental and nervous illness. In addition, there is accommodation mainly in private rooms both in the main hospital and in various villas, for longer stay patients and geriatric patients.

The hospital's amenities include Gloucester House, which comprises an occupational therapy department, swimming-pool, a squash court and library, while in the grounds there are tennis courts, a nine-hole golf course, etc.

Fee range from 25 guineas per week, and charges for treatment at St. Andrew's Hospital are allowable for benefit to British United Provident Association and Private Patients Plan subscribers.

Further particulars can be obtained from the Medical Director, St. Andrew's Hospital, Northampton (Tel.: Northampton 34354), who can be seen in consultation by appointment either at the hospital or at 55 Harley Street, London W.1.

**THE MANOR HOUSE NURSING HOME**

# Why upper respiratory infections are Penbritin Territory

Penbritin offers you broad-spectrum activity with the safety of a penicillin. This extra activity is useful because certain Gram-negative organisms, for example *H. influenzae*, are beyond the range of traditional penicillins and may prove troublesome.

Unlike some broad-spectrums such as tetracyclines which merely inhibit organisms, Penbritin destroys bacteria and minimises the risk of relapse or complications. Also many respiratory bacteria have now become resistant to the tetracyclines. No such problem has arisen with Penbritin after more than eight years of clinical use.

Toxicity and side-effects (such as tooth staining) are further factors which limit the usefulness of some antibiotics. However, Penbritin is a penicillin and can confidently be prescribed for children, for neonates and in pregnancy. More than 1,600 published references have demonstrated its lack of toxicity for all age-groups.

Penbritin is available in highly acceptable presentations – capsules, tablets and syrups. This acceptability encourages patients to finish the prescribed course of treatment, even when the symptoms have gone.

Full information is available on request.

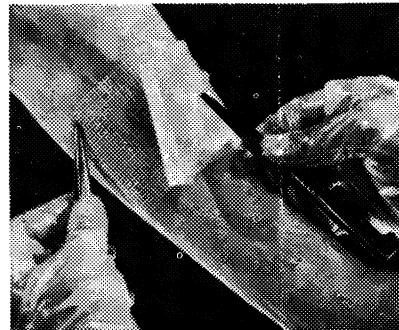

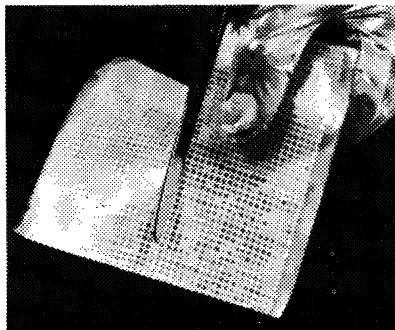

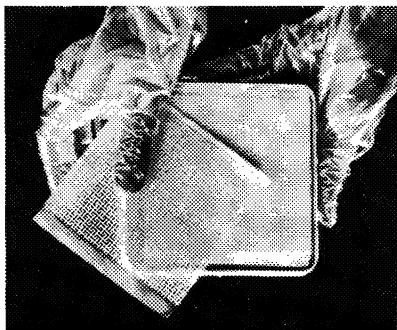

Penbritin\* (ampicillin B.P.) is a product of British research at  
**Beecham Research Laboratories**, Brentford, England.

# It's as easy as ABC to use doubly-interleaved **intertulle fucidin**

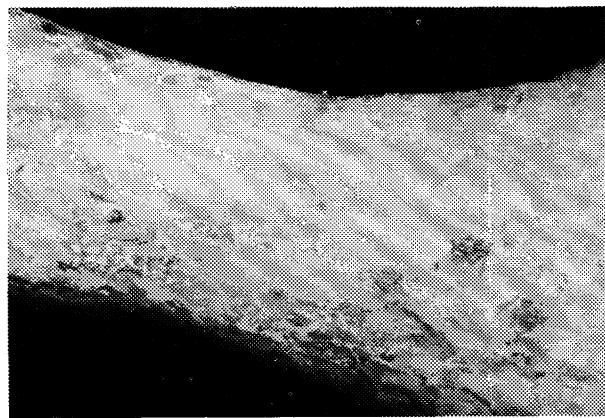

Each square slides easily from the pack; dressings no longer stick together. There is no waste. A tulle square is cut to the size you need, the protective interleaving is peeled away and the dressing applied to the lesion. The remaining protective sheet is removed and dressing is completed as required. Intertulle Fucidin has the bactericidal power of Fucidin Ointment against staphylococci and streptococci and remarkable

freedom from side-effects.

Intertulle Fucidin is presented in special white plastic packs containing 10, 4" x 4" sterile gauze squares, doubly-interleaved for easy use and impregnated with Fucidin Ointment (2% Sodium Fusidate B.P. in a neutral ointment base) — the logical topical antibiotic.

**Now available on E.C.10**

**a case in point:** *Left: Varicose ulcer on leg of 74 year-old man  
Right: After 5 weeks' treatment with Intertulle Fucidin*
