

The range of Betnovate rectal preparations...

is complete

Now there's a complete range of Betnovate haemorrhoidal preparations for the treatment of external and internal haemorrhoids, anal fissure, peri-anal eczema and mild proctitis.

Betnovate Compound Suppositories and Betnovate Rectal Ointment both contain betamethasone 17-valerate — the most successful topical corticosteroid. Not only does Betnovate achieve a faster and more complete clearance in relatively responsive conditions, but also it often succeeds when other topical steroids fail.^{1,2,3}

A week ago her problem was her skin

She didn't know when it started. All she knew was the more she scratched the worse it got – and then it started to spread. She complained of the irritation and was too embarrassed to meet her friends. It was only then that she realised that something must be done; and done quickly. Her doctor told her it was eczema and prescribed Propaderm cream.

Propaderm relieves skin problems

Propaderm can be used for all conditions responsive to topical steroid therapy. Propaderm is beclomethasone dipropionate – a powerful topical steroid. So powerful that in a recent trial 94% of 252 patients with eczema or psoriasis showed good results when treated with Propaderm (cream, ointment and ointment with 3% aureomycin BP). Propaderm is fast acting. In the same trial the majority of patients who responded to Propaderm did so in the first week of treatment.

"All three preparations of the drug which were tested were found to be superior to previous treatments. No side effects were reported."

Practitioner, (1968) 201, 362.

PROPADERM-A OINTMENT with 3% aureomycin BP.
Also available: Propaderm Lotion. Propaderm-C Ointment & Cream (with 3% clioquinol). Propaderm-N Ointment & Cream (with 0.5% neomycin sulphate BP). Propaderm-L Rectal Ointment & Suppositories (with lignocaine).

Whatever
her
make-up...

Only three available oral contraceptives offer the exceptional advantages of megestrol acetate, a pure progestogen related to the naturally occurring *female* hormone progesterone. These are Nuvacon, Volidan 21, and Serial 28. Most women, whatever their hormonal make-up, will be suited by one of them.

Megestrol Acetate

... a 17 α -acetoxy progestogen, is unlike other progestogens derived from 19-nor-testosterone, since it possesses no androgenic or anabolic activity. It does *not* produce any tendency towards muscular weight gain, facial hair, acne or loss of libido.

Megestrol Acetate

... unlike the 19-nor-testosterone derivatives is not partially metabolised to oestrogen. Preparations containing megestrol acetate therefore provide predictable quantities of oestrogen and progestogen.

Megestrol Acetate

... being a pure progestogen, produces a pattern more closely approximating to the physiological menstrual cycle when used in a sequential formulation.

Megestrol acetate is a product of British research

Whatever
her
make-up...

When the practitioner has weighed up the advantages of megestrol acetate, Nuvacon—likely to suit the needs of most women—may well be the first choice. But for some patients differences in hormonal make-up could demand variation in dosage—or even the use of a sequential preparation. For them the advantages of megestrol are provided in Volidan 21 and Serial 28.

Nuvacon*

21 tablets each containing:
Ethinylloestradiol BP 0.1 mg
Megestrol acetate 2 mg

Nuvacon is the only *low-dose* oral contraceptive with megestrol acetate—a pure progestogen related to the naturally occurring female hormone progesterone. Ideal for the normal healthy woman, Nuvacon is a product of British research and costs less than most other oral contraceptives currently available.

Volidan*21

21 tablets each containing:
Ethinylloestradiol BP 0.05 mg
Megestrol acetate 4 mg

Volidan 21 has the lowest oestrogenic activity of any combined oral contraceptive and avoids the risk of androgenic side effects. Volidan 21 is suitable for most women, but particularly for those whose periods are heavy or irregular.

A 15-second selective prescription chart is available on request, together with full details.

Serial*28

28 tablets:
16 red tablets each containing Ethinylloestradiol BP 0.1 mg
5 white tablets each containing Ethinylloestradiol BP 0.1 mg
7 blue tablets each containing Megestrol acetate 1 mg
lactose

Although the sequential regimen is slightly less effective, its efficacy is nevertheless second only to that of a combined formulation. It is therefore suitable for patients who cannot tolerate combined preparations or for young women wishing to space their families. Serial 28 is the only sequential preparation with megestrol acetate.

Duphar laboratories concentrate all their resources and efforts on just four fields of medicine.

Gastroenterology, Obstetrics and Gynaecology, Cardiovascular and Respiratory Pathology are the areas in which Duphar, the UK associates of an international organisation, have chosen to deploy their resources. Duphar products are marketed in the knowledge that they are born of thorough investigation and exhaustive research. Since Duphar concentrate their efforts on a small range, the medical profession can be sure that any product released represents an advance in a specialised field.

EXACERBATIONS OF BRONCHITIS

**offer broad spectrum
antibiotic activity**

PLUS

**the benefits of
uninterrupted Bisolvon
therapy during the
bronchitic's acute
infected phases**

Bisolvon disrupts the feltwork of AMPS (acid mucopolysaccharide) fibres responsible for the viscosity of *mucoïd* sputum, but takes about ten days of continuous treatment to reach its full effect. The patient should then be producing thinner and less sputum than originally. This beneficial effect of Bisolvon is maintained for as long as treatment continues.

During an infective exacerbation bacterial action causes the breakdown of cells and cell nuclei, producing DNA (desoxyribonucleic acid) fibres and fragmentation of existing AMPS fibres. DNA fibres therefore predominate in *purulent* sputum.

At this stage it is very important to maintain Bisolvon therapy, together with an effective antibacterial. This ensures that once the infection is brought under control (therefore eliminating DNA fibres) AMPS fibres do not re-form to raise sputum viscosity.

Bisolvomycin capsules, containing Bisolvon with oxytetracycline, have been developed to enable Bisolvon therapy to be conveniently maintained during the bronchitic's infective exacerbations.

Turquoise blue/grey capsules printed with the Company symbol.

Each capsule contains:

Bisolvon (bromhexine hydrochloride) 8mg.
oxytetracycline hydrochloride B.P. 250mg.

Further information on Bisolvomycin can be obtained from:

Boehringer Ingelheim Limited Isleworth Middlesex

Contra-indications

Bisolvon: There are no absolute contra-indications, but observe caution in patients with gastric ulcer.

Oxytetracycline: Known tetracycline allergy; should not be given in pregnancy or in presence of renal or hepatic dysfunction. The concurrent administration of antacids should be avoided.

Precaution

Bisolvon: When patients under treatment for tuberculosis are also receiving Bisolvon, continue sputum cultures for tubercle bacilli for at least 3 months before assuming a negative result.

Oxytetracycline: Teeth staining may occur in children.

Side-effects

Bisolvon: Mild gastro-intestinal side-effects may occasionally be caused. A transient rise in serum transaminase levels may be observed in a few patients. These should fall again with continuation of Bisolvon treatment.

Oxytetracycline: May cause nausea, diarrhoea and symptoms resulting from the overgrowth of resistant organisms; in particular, overgrowth of *Candida albicans* may cause irritation of mouth, anus or vagina. Drug fever or rashes rarely occur.

Molecular roulette is not Duphar's game.

Duphar research aims solely at the development of original molecular structures which represent therapeutic advances. Before we develop any product we must be assured that it will fill a definite gap in the therapeutic armamentarium. By adhering to this policy Duphar have succeeded in making their contributions to four carefully

selected fields of medicine—gastroenterology, obstetrics and gynaecology, cardiovascular and respiratory pathology. In these areas we have acquired depth of knowledge and expertise—and it is to these areas that we will continue to devote the major part of our resources.

broad spectrum antibiotic therapy
(for all your patients)

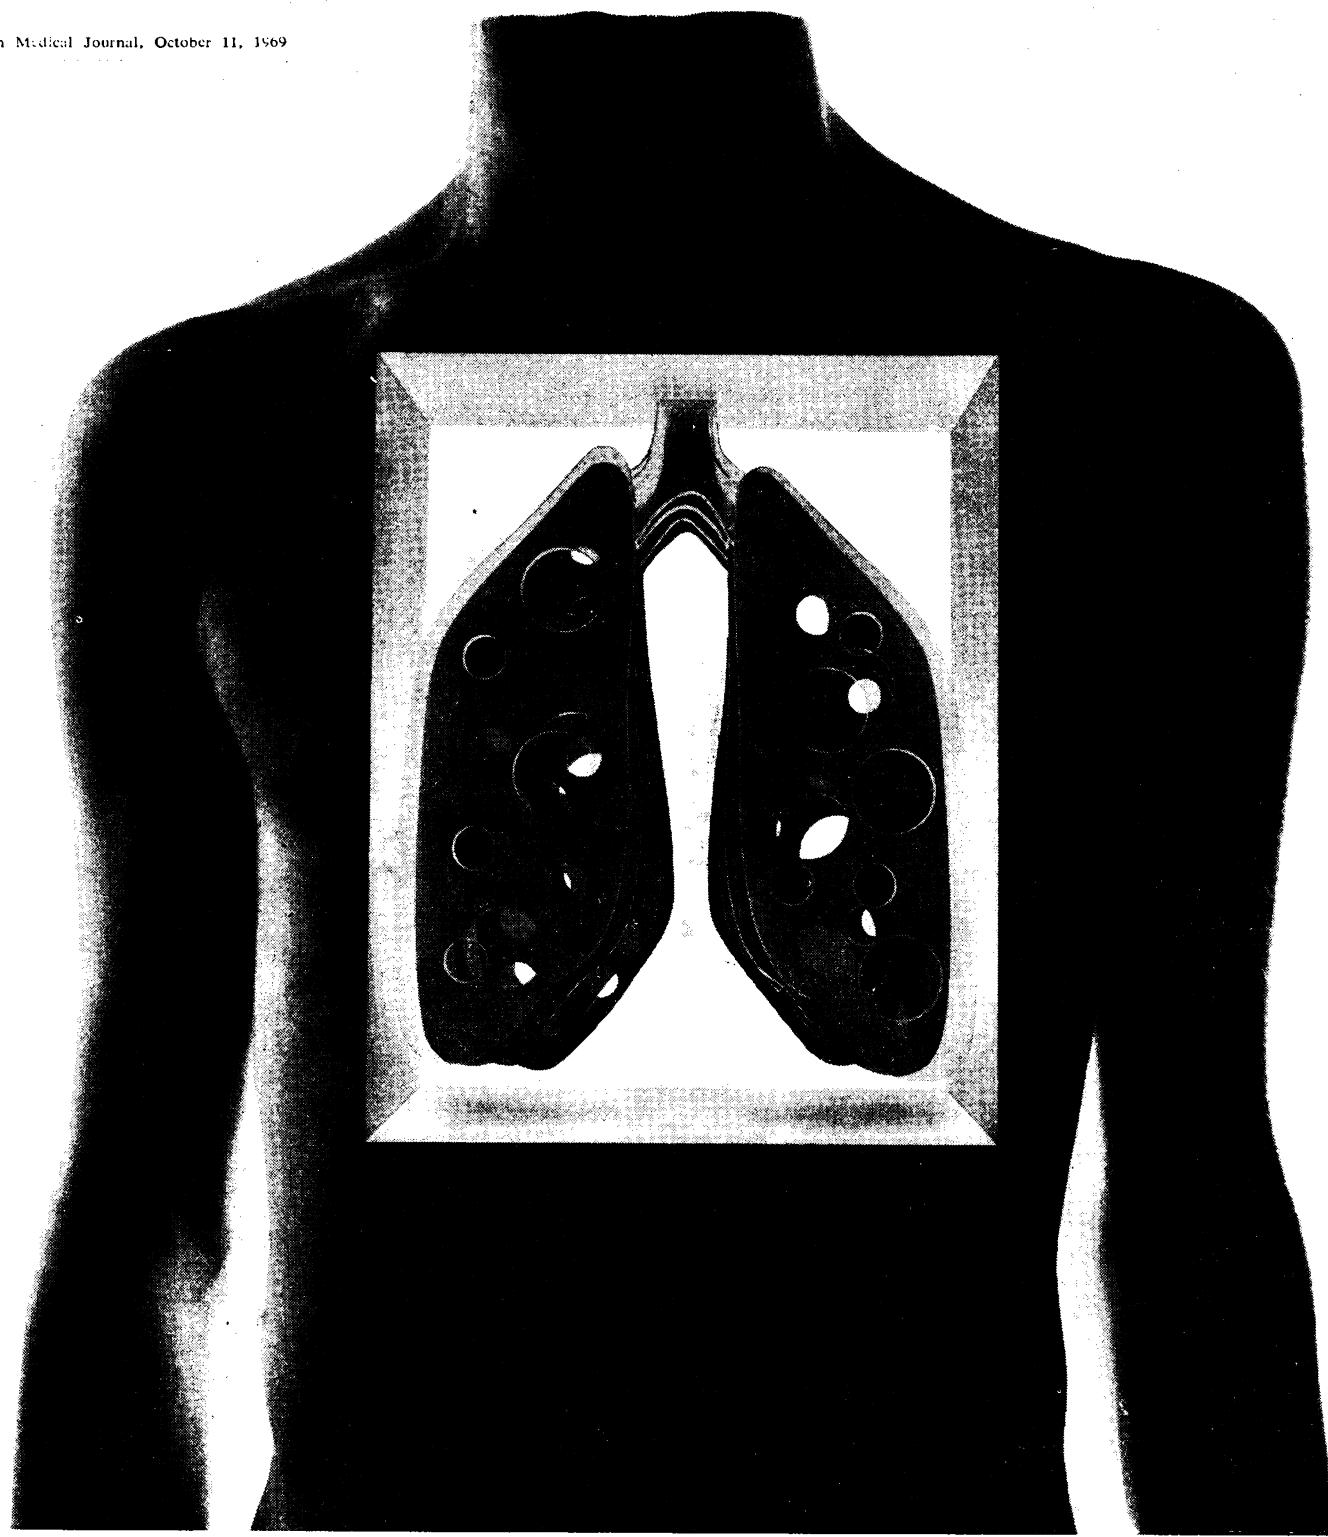

Taste—to make therapy a pleasure, 'Imperacin' syrup contains that extra ingredient—palatability. **Quality**—the active ingredient, calcium di-oxytetracycline, is made at the ICI Antibiotics Plant at Manchester, where experience in the manufacture and formulation of antibiotics since 1941 ensures a high quality, British oxytetracycline, acceptable to all patients. **Low cost**—The introduction of 'Imperacin' tablets and capsules cut the cost of broad

spectrum antibiotic prescribing by two-thirds—and further reductions of 25% and 10% have since been made. The basic N.H.S. cost is now less than a shilling a day with the tablets and capsules.

The syrup costs (60 ml.)—4/3—(100 ml.)—6/9.

dramatic disappearance of bronchitis pathogens

... a combination of trimethoprim and sulphamethoxazole provided effective prophylaxis in chronic bronchitis. It dramatically diminished sputum volume, rendered it mucoid and abolished pathogens.¹

This combination, available as SEPTRIN*, swiftly eradicates a wide range of organisms including the pathogens common in bronchitis—*H. influenzae*, *Pneumococci* and *Klebsiella* sp.

SEPTRIN has been compared in a trial with ampicillin in treating exacerbations of chronic bronchitis. SEPTRIN produced a significantly greater reduction in sputum volume and of

sputum purulence and the trial also showed that SEPTRIN produced a better overall *clinical* response in the bronchitic patients.²

Seprin—an advance on the antibiotics

Johnny went into hiding q.i.d. until the doctor prescribed 'Ilosone' Suspension

'Ilosone' excels in paediatric infections. But the flavour of the suspension (although important to Johnny) is only one of the reasons why it works so well. Against gram-positive cocci 'Ilosone' is much more active than, for example, the tetracyclines — and it will not discolour teeth or deposit in bone. Thus for infections such as tonsillitis, pharyngitis, pneumonia, otitis media and acute bronchitis — 'Ilosone' Suspension is a first-line treatment.

For each of them the problem is pain

For all of them the answer is **Paynocil**
regd.

Lumbago or low back pain, fibrositis, muscular rheumatism—however you describe these rheumatic disorders, they mean the same thing to the patient. Pain. And the text-book therapy is the same, too—aspirin.

Then why prescribe Paynocil?

First, because Paynocil is aspirin. So it stops pain and relieves inflammation. Second, because Paynocil is aspirin with all these additional benefits:

Well tolerated: Paynocil also contains 300 mg. of glycine, which helps to distribute the aspirin rapidly into the stomach in the finest particles, thus minimising the risk of gastric irritation. Patients with rheumatic disorders who experience nausea, heartburn or epigastric pain after plain aspirin have found Paynocil acceptable.

Quick acting: Paynocil, at 600 mg. aspirin per tablet, has twice the strength of aspirin tablets B.P., and in equivalent dosage, is twice as rapidly absorbed. A property which could be of particular value—in combating the rheumatic's morning stiffness for example.

Convenient: Paynocil can be taken without water, for glycine masks the unpleasant taste of aspirin and allows the tablet to disperse instantly on the tongue in a burst of lemon flavour. The tablets come in protective foil strips which slip easily into handbag or pocket. All of which makes Paynocil a most practical form of aspirin for active people.

Junior Paynocil is available, for children, at 150 mg. aspirin per tablet.

It is a statistical fact that urinary frequency, the bane of old age, awaits the majority of us.

"Nocturnal frequency of micturition is present in 64% of the total elderly population (70% of males and 61% of females of 65 years and over)."¹

The results of a recent double-blind crossover trial of Cetiprin suggest that "the drug may alter the established habit of rising at night to pass urine".² Cetiprin blocks the innervation and increases bladder capacity but as frequency of urination may have become established as a *habit* as well as a physiological weakness, it is wise to persist with treatment for at least 14 to 21 days.

Improvement in the patient's condition is manifested by the enjoyment of uninterrupted sleep and a new feeling of physical and mental well-being.

Dosage:

Adults and Geriatric patients :

1. Nightly tenesmus : 100 mg at bedtime. In chronic cases it may be necessary to use 200 mg and reduce the dose when control is established.
2. Urinary frequency and severe incontinence in old people : 100-200 mg three times daily.

Contraindications:

Large residual urine retention ; glaucoma ; gastric retention. Rarely, dryness of the mouth is an unwanted effect.

Are doctors immortal?

Some patients seem to think that doctors never die. Or become ill. Or have accidents.

But as a doctor you know that your chances of falling sick, or breaking a leg tomorrow are the same as everyone else's. And the effect on your life and family is much graver.

Your practice, for instance, must be kept going. So your income plunges overnight. And your life becomes stifled by financial worries: how to keep your family, meet school fees, pay the mortgage. To a sick man worry is a poisonous enemy.

That's why it's so wise to insure against sickness or early death. Wiser still to insure with the company run exclusively for doctors and dentists: the Medical Sickness Society.

You know that one day you may need this insurance. So write today. Together we'll find the policy which will work hardest for you.

MEDICAL ADVISER

ETHICAL PHARMACEUTICALS

Part of a large European group, this U.K. subsidiary is growing rapidly and profitably and has now reached the stage where an independent medical department must be started. This will be the first appointment of a Physician within the British company and, as such, offers extremely good career prospects. Reporting to the Technical Director, the new man will be responsible for clinical research trials and medical information. He will be a member of the International Group Clinical Research Committee, make regular but short visits overseas and be involved in trials in other countries. Candidates must be within the 28 to 35 age group and have broad medical experience to a minimum of registrar level; the specialization is not important. It may be that the successful candidate will have had a year or two in general practice and now wishes to change his course. It will be possible for the man appointed to progress into general management within the group, should he have the ability and inclination. Conditions of employment are good and include full assistance with all removal expenses to the head office in Surrey, where necessary. A car is provided and the starting salary will be negotiated within the range £3,000 to £4,000. (Ref.: PF27/3729/BMJ)

The identity of candidates will not be revealed to our client without prior permission. Applicants should forward brief details, quoting the reference number, to:

SERVICES

What's in the R.A.F. for a young doctor?

Interesting out-of-the-rut medicine

The typical R.A.F. station doctor is a G.P. - with probably a lot of experience in pediatrics! He also has important responsibilities in aviation medicine, public health and industrial health. He does much more preventive work than most civilian doctors are able to do. There are wide opportunities for hospital practice - 47% of R.A.F. doctors are now working in specialist departments.

The chance to travel

You could live and work abroad, in many different conditions and climates, treating not only R.A.F. personnel and their families, but local populations. Your gain in clinical experience would be marked.

... a fair crack of the whip for the Doctor's wife

A Doctor's wife is a Doctor's *wife*. She should not also have to be his telephone-answerer, appointment-maker, dispenser and general auxiliary! In the R.A.F., these things are done by professionals: the typical R.A.F. doctor, on a typical R.A.F. station, works in a fully equipped Medical Centre, which he shares with another doctor; between them they would probably have about 12 staff—secretarial as well as nursing.

£3,000 (tax free) after 5 years

In the first case, you would probably join the R.A.F. for 5 years. If you decide to go back to civil life at the end of this time, you would take with you a tax-free honorarium of £3,000. (You might of course wish to stay on: you can apply after the first year.) Now for income: suppose you are a married man of 25, fully registered. If you were in the R.A.F., your income would be at least £2,522 p.a. The R.A.F. would probably provide you with a house, furnished right down to the last coffee-cup; for this, the rent would be £16 a month.

To find out more please write, giving your age, nationality, qualifications and date of full registration with General Medical Council, to The Directorate General of Medical Services, RAF (MA1 (RAF)), Ministry of Defence (724QS2), 1-6 Tavistock Square, London W.C.1.

in depression

grounds for optimism

For the depressed patient, optimism about the chances of recovery begins with the first visit to the physician who shows an interest in his case. This optimism can be built upon with the aid of modern antidepressant drugs, enabling the physician to help his patient to a more speedy recovery.

In this respect, 'Concordin' often brings an initial elevation of mood within a week—the patient soon has grounds for greater optimism.

'Concordin' is available as tablets in two strengths: 'Concordin'-10 as white, film-coated tablets (marked 'C10') containing 10 mg protriptyline hydrochloride, in bottles of 100 and 500; 'Concordin'-5 as salmon-red, film-coated tablets (marked 'C5') containing 5 mg protriptyline hydrochloride, in bottles of 100 and 500.

Concordin

Protriptyline hydrochloride

'Concordin' offers many depressed patients these advantages:

- speed of action—improvement often starts within a week
- virtual freedom from sedative activity—the patient on 'Concordin' can continue with normal activities since drowsiness is rare
- no dietary restrictions—'Concordin' is not a MAOI and so the patient can enjoy full freedom in choice of food
