Fersaday and Pregaday

Hygienic pop-out packs

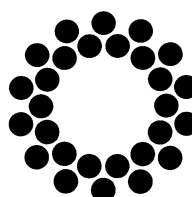

The name's on every tablet

For your detailed reading

Patients frequently forget to take iron tablets, but they don't forget Fersaday and Pregaday. Firstly they only have to remember to take them once a day. And secondly, the specially designed packs identify each tablet with the day of the week, so patients can see at a glance whether or not they've taken their daily tablet. Each pop-out pack contains 28 tablets so it's easy for you too – simply prescribe Fersaday or Pregaday once a month. Fersaday and Pregaday are among the least expensive of the once-a-day iron and iron plus folic acid tablets – another good reason for prescribing them whenever extra iron is needed.

Fersaday and Pregaday –
once-daily iron tablets in forget-proof packs

Fersaday

Fersaday Tablets contain 100 mg ferrous iron as ferrous fumarate BP, an exceptionally well tolerated compound of high iron content for the prophylaxis and treatment of iron-deficiency anaemia.

Precautions

Some post-gastrectomy patients show poor absorption; careful surveillance of this group is advised.

Adverse reaction

The incidence of gastric intolerance is low.

Dosage

The usual adult dosage is one tablet daily.

Pregaday

Pregaday Tablets contain 100 mg ferrous iron as ferrous fumarate BP and 350 micrograms folic acid, for the prophylaxis of iron deficiency and megaloblastic anaemia of pregnancy.

Precaution

A minority of pregnant women are not protected by physiological doses of folic acid.

Adverse reaction

The incidence of gastric intolerance is low.

Dosage

One tablet daily.

PRACTICAL PSYCHIATRY

from the British Medical Journal

Most doctors who have been qualified for more than ten years received very little training in psychiatry as medical students. Yet psychiatric problems confront all those practising clinical medicine. The articles collected together in this book were written for the *B.M.J.* to give practical advice to general practitioners and others on how to recognize and cope with the more common forms of mental disorder. Many patients are anxious or depressed; when should the doctor try to do something about it? This is the sort of question the authors set out to answer. As far as possible they have avoided the use of psychiatric jargon, and case histories have been used freely to illustrate the points made. Any doctor who feels ignorant about psychological medicine will find here a readable introduction to the practical aspects of clinical psychiatry.

New oral antibiotic

Ceporex

cephalexin

in acute urinary tract infections,
including pyelonephritis,
gives a clinical success rate of over 80%*

Summary

Ceporex, the new cephalosporin antibiotic from Glaxo, is the most completely absorbed oral antibiotic available, and gives very high tissue and urine levels within an hour of administration. In addition Ceporex has other advantages. It kills the gram-negative bacteria responsible for the majority of urinary tract infections, and this, together with its low toxicity, makes it ideally suited to the treatment of acute cystitis, pyelonephritis and other urinary tract infections. It can also be used in patients hypersensitive to the penicillins.

Indications

Gram-positive and gram-negative bacterial infections of the urinary tract, respiratory tract, soft tissues and skin due to susceptible organisms. Acute and chronic pyelonephritis,

cystitis, prostatitis and asymptomatic bacteriuria.

Upper respiratory tract infections such as bacterial tonsillitis and pharyngitis. Otitis media and externa, sinusitis and other infections of the ear, nose and throat.

Pneumonia, bronchopneumonia and post-operative chest infections. Bronchitis and bronchiectasis.

Furunculitis, erysipelas, cellulitis, abscess, lymphangitis, pyoderma and other skin, wound or soft tissue infections.

Gonorrhoea (when penicillin is unsuitable)

Bone and joint infections including osteomyelitis and septic arthritis.

Gynaecological and obstetric infections

Temporary replacement of penicillin prophylaxis in patients with rheumatic heart disease whilst undergoing dental treatment.

Administration and Dosage

Ceporex is administered orally. The adult dosage in urinary tract infections: 250 to 500 mg 6-hourly.

Adverse reactions and precautions

A small proportion of patients receiving cephalexin may experience gastro-intestinal disturbances such as nausea, vomiting, anorexia and general abdominal discomfort. As with all broad-spectrum antibiotics, superinfection can occur (often monilial) and sometimes a vulvo-vaginitis. Reversible neutropenia has occurred in a few patients, but is very rare. Generalised drug rashes—urticarial or maculopapular—are uncommon. When renal function is very markedly impaired, Ceporex may accumulate in the serum and tissues, unless the dosage is suitably reduced.

Contra-indications

Cephalexin is contra-indicated in persons who have shown hypersensitivity to cephalosporins.

SYMPOSIUM REPORT ON SEPTRIN*

Since the introduction of SEPTRIN this major advance in antibacterial therapy has had wide clinical success. Experience gained with SEPTRIN in many areas of medicine was discussed at a Symposium held at the Royal College of Physicians, London, in May, 1969†. Here are brief summaries of three comparative trials reported: fuller details are available on request.

†*Postgrad. med. J.* (1969), 45, Supplement (November) 86.

in bronchitis (compared with ampicillin)

SEPTRIN produced objectively determined improvement in patients suffering exacerbations of chronic bronchitis. SEPTRIN was shown to be more effective than ampicillin in its effect in reducing sputum volume and purulence.

in bronchitis (compared with tetracycline)

SEPTRIN was compared with tetracycline in another trial and was shown to provide a more beneficial effect on exacerbations of chronic bronchitis. Again significantly greater reductions in sputum volume and reduction in purulence were observed.

*Trade mark.

in U.T.I. (compared with ampicillin & sulphadimidine)

SEPTRIN was found superior to ampicillin and sulphadimidine in treating hospitalised patients with U.T.I. Cure rates achieved were 85% with SEPTRIN, 70% with ampicillin and 40% with sulphadimidine. (Cure criterion=eradication of original organism from the urine 1 week after the end of treatment.)

New oral antibiotic

Ceporex

cephalexin

for respiratory tract infections
gives a clinical success rate over 85%
in pneumonia*

Summary

Ceporex, the new cephalosporin antibiotic from Glaxo, is the most completely absorbed oral antibiotic available, and gives very high blood and tissue levels within an hour of administration. In addition Ceporex has other advantages. Its wide range of activity includes most gram-positive organisms, (including penicillin-resistant staphylococci) and most of the gram-negative organisms which can be responsible for respiratory tract disease. New oral antibiotic

Ceporex

cephalexin

in soft tissue infections like cellulitis
gives a clinical success rate of over 85%*

Summary

Ceporex, a new cephalosporin antibiotic from Glaxo, is the most completely absorbed oral antibiotic available, and gives very high blood and tissue levels within an hour of administration. In addition Ceporex has other advantages. It is highly effective in skin and soft tissue infections, being equally active against penicillin-sensitive and penicillin-resistant staphylococci and more active against *Strep. pyogenes*. Gram-negative organisms which may be encountered are also sensitive. Its rapid kill of sensitive bacteria and low toxicity make Ceporex ideally suited to the treatment of skin and soft tissue infections. It can also be used safely in patients hypersensitive to the penicillins.

Indications

Gram-positive and gram-negative bacterial infections of the urinary tract, respiratory tract, soft tissues and skin due to susceptible

organisms.

Acute and chronic pyelonephritis, cystitis, prostatitis and asymptomatic bacteriuria.

Upper respiratory tract infections such as bacterial tonsillitis and pharyngitis.

Pneumonia, bronchopneumonia and post-operative chest infections.

Bronchitis and bronchiectasis. Furunculitis, erysipelas, cellulitis, abscess, lymphangitis, pyoderma and other skin, wound or soft tissue infections.

Gonorrhoea (when penicillin is unsuitable)

Bone and joint infections including osteomyelitis and septic arthritis.

Gynaecological and obstetric infections.

Temporary replacement of penicillin prophylaxis in patients with rheumatic heart disease whilst undergoing dental treatment.

Administration and Dosage

Ceporex is administered orally. The adult dosage in skin and superficial soft tissue infections: 250 to 500 mg 6-hourly.

Adverse reactions and precautions

A small proportion of patients receiving cephalixin may experience gastro-intestinal disturbances such as nausea, vomiting, anorexia and general abdominal discomfort. As with all broad-spectrum antibiotics, superinfection can occur (often monilial) and sometimes a vulvo-vaginitis. Reversible neutropenia has occurred in a few patients, but is very rare. A broad spectrum for UTI

Clinical reports show that a satisfactory clinical response is obtained in **93%** of patients with acute infections and **80%** of patients with chronic infections due to frequently encountered urinary pathogens such as *E. coli*, *Proteus mirabilis*, and *Klebsiella*.

K Dosage

The usual adult dose is **250 mg** every six hours. For more severe infections or those caused by less susceptible organisms, **500 mg** every six hours may be needed. In appropriate cases up to **4G** per day may be given.

Precautions Any patient who has demonstrated some form of allergy, particularly to drugs, should receive antibiotics, including cephalixin, cautiously and then only when necessary. If severe reaction, individual idiosyncrasy, or allergy should occur, treatment should be discontinued.

The safety of cephalixin for use in pregnancy has not been established.

In patients being treated with cephalixin, a false positive reaction for glucose in the urine may occur with Benedict's or Fehling's solutions, or with copper sulphate test tablets.

Adverse Reaction There have been infrequent and mild. The most frequent was mild diarrhoea reported in slightly over 1 per cent of 1230 patients studied. Nausea was reported in about 1 per cent. Skin reactions including rash, pruritus, and dermatitis were also reported in 1 per cent of patients. Other side effects reported more rarely have been vomiting, monilial vaginitis, dizziness, headache, and abdominal pain.

Contra-indication 'Keflex' is contra-indicated in persons who have shown hypersensitivity to cephalosporins.

'Keflex' is available in green and white capsules containing 250 mg cephalixin (as the monohydrate). Further information is available on request.

Four factors in a diagnosis can point to one word

Take a case of tonsillitis. First, you gauge its severity. Second, you are aware of possible sequelae, so the treatment must be effective. This leads you to opt for a penicillin rather than a bacteriostatic agent. Finally, you choose one that is easy and pleasant to take. It all points to Broxil Syrup.

Broxil works. In practice, patients do seem to get better quicker with Broxil. Broxil has an excellent safety record. All you ever need do is take the normal penicillin precautions. For ENT, upper respiratory tract, skin and soft tissue infections, Broxil has an outstanding record for effectiveness over ten years of practice.

Opportunities for experience in

CLINICAL PHARMACOLOGY

A major British Pharmaceutical Company has agreed to finance the appointment of a RESEARCH MEDICAL REGISTRAR who will work in the Medical Department of the West Middlesex Hospital. The Department is exceptionally well placed for clinical work and it has good radiological diagnostic equipment as well as a Whole Body counter for radio-isotope investigations. There are also plans to equip a Clinical Pharmacology unit. The Company spends several million pounds a year on pharmaceutical research and development. It employs high calibre scientists in well equipped laboratories close to the hospital.

The training and experience the Registrar will receive would either be valuable in his development as a Physician or would equip him for a research post. He will remain in touch with clinical medicine and should be able to develop his own research interests (perhaps for a M.D. thesis) for part of the time; permission to publish would not be unreasonably withheld.

The successful candidate will be in his late 20s or early 30s and preferably a member of a Royal College of Physicians. At least two years' post-registration clinical experience is essential. The appointment will be on the N.H.S. Registrar scale; no references are required at this stage.

Please send full details of qualifications and experience to:

The Hospital Secretary,
West Middlesex Hospital,
Isleworth, Middlesex.

WE ARE LOOKING FOR AN ASSISTANT to work in an existing three-man group in the resort town of West Coast Hospital, Ontario, Canada, with a view to full partnership if mutually agreeable. Modern, fully equipped hospital. Schools and recreational facilities available. Salary in line with present day standards. To start as early in 1970 as possible.—For further details apply to: The Greig Medical Group, Bracebridge, Ontario, Canada.

WEST COAST HOSPITAL BOARD
Medical Staff, B.Ier Hospital, Westport

Vacancies will shortly arise on the medical staff of this hospital and applications from suitably qualified medical practitioners, registrable in New Zealand, are hereby invited for the following posts:
Either Two-part-time Visiting Medical Officers of special scale.
Or A full-time Medical Officer of Specialist or special scale rating and a part-time Medical Officer of special scale.

Explanation
The Board would be willing to appoint two part-time Medical Officers with surgical experience sufficient between them to carry general surgery, including emergencies. They would be expected to co-operate with, and if need be refer to, the Specialist staff employed by the Board in respect of difficult and urgent cases.

The senior in years and experience would be appointed Medical Superintendent. The relative number of sessions allocated to each appointee would be a matter for negotiation, but between them the Officers would share at least 10/10ths. Though desirable, a higher qualification would not be essential if the applicant has experience and competence.

Note: Some anaesthetic experience would be an advantage in respect of any part-time appointments.

Salary and conditions will be in accordance with the Hospital Employment (Medical Officers) Regulations in the scale: \$6,090-\$8,100 for Specialists, or \$4,480-\$6,420 for Medical Officers of special scale.

An additional payment of up to \$400 for a full-time appointee in the salary range \$5,130-\$7,800 and an appropriate portion thereof for a part-time appointee has been authorized for these positions.

Conditions of appointment and further information are available from the Medical Superintendent—Chief, West Coast Hospital Board, P.O. Box 387, Greymouth, to whom applications should be addressed. (13381)

WEST COAST HOSPITAL BOARD
New Zealand

Westland Hospital, Hokitika

MEDICAL OFFICERS

The present Superintendent is relinquishing administrative duties as he is now Regional Orthopaedic Specialist, and there will shortly be a vacancy due to the departure of a Medical Officer. Applications, therefore, are invited for:

Either: (1) 3/10 Anaesthetist or Physician
(2) 6/10 Medical Superintendent.
Clinical duties general—some orthopaedic and general surgical experience and capability would be advantageous. (In both cases salary as Medical Officer of special scale.)

or (3) Full-time Medical Superintendent—duties as shown above with salary range Medical Officer of special scale \$4,480/\$6,420, plus superannuation incentive allowance for applicants should have been qualified for the West Coast, ranging from \$300-\$400.

Note: There is opportunity for private general practice in the town and district, and the Board would prefer to appoint suitable part-time applicants. Scale as per regulations according to experience and qualifications.

Further conditions and further information may be obtained from Medical Superintendent—Chief, P.O. Box 387, Greymouth, New Zealand. (13379)

WEST COAST HOSPITAL BOARD**WHOLE-TIME ANAESTHETIST (2)**

Grey Hospital, Greymouth, New Zealand
Applications are invited for the above positions from suitably qualified Medical Officers, registrable in New Zealand.

There are two vacancies for the above posts based at Grey Hospital.
The positions are of Specialist status, and applicants should have been qualified for a minimum period of eight years, have had five years' experience in the specialty and possess an appropriate higher qualification. Salary and conditions will be in accordance with the Hospital Employment (Medical Officers) Regulations in the scale \$6,090 to \$8,100 plus special incentive allowance for Hospital Medical Officers employed on the West Coast, ranging from \$300-\$400. The commencing rate will be determined by the Director General of Health, having regard to qualifications and previous experience.

Housing may be available and can be the subject of negotiation with applicants.

The anaesthetic, resuscitation, and allied services for the whole region are to be re-organized, co-ordinated and improved. The scheme is dependent upon the appointment of two full-time Specialists, who will work in close conjunction and share responsibility by agreement for routine line surgery of three hospitals, for some emergency work at Grey Hospital, and for the organization and maintenance of first aid resuscitation and emergency respiratory care and parenteral therapy procedures (in collaboration with local Specialists and technologists, and an advisory haematologist) for the whole region. They may also be required to train part-time visiting medical

staff as relief anaesthetists for all hospitals.
Dr. D. T. Chisholm, Director of Anaesthesia, Christchurch Hospital, could also advise enquirers.
Conditions of appointment and further information are available from the Superintendent-in-Chief, West Coast Hospital Board, P.O. Box 387, Greymouth, to whom applications should be addressed. (13380)

Children, respiratory infections and Penbritin

Penbritin is successful against the wide range of bacteria which may cause tonsillitis, pharyngitis, bronchitis and other respiratory infections.

Penbritin kills the organisms rather than merely inhibiting them, and so minimises the risk of relapse or complications. In paediatrics this is especially important, since a child's natural defences can be inadequate.

Penbritin has all the safety of a penicillin and can be prescribed with confidence for all age groups. It does not stain teeth nor is it deposited in the bones of young children.

Penbritin is available as a pleasant syrup which encourages children to finish the prescribed course.

Full information is available on request.
