

NEW WORKS

PUBLISHED BY

MR. CHURCHILL, PRINCES STREET, SOHO.

THE CAUSE and TREATMENT of CURVATURE of the SPINE, and DISEASES of the VERTEBRAL COLUMN, with Cases. By E. W. TUSON, F.R.S., F.L.S., Surgeon to the Middlesex Hospital. 8vo. cloth, with 26 plates, price 10s. 6d.

"Mr. Tuson's treatment is sound and judicious, and there is much solid and useful information to be obtained from a perusal of his pages. We recommend the volume as deserving of the attention of our readers."—*Lancet*.

"The present work being a 'Practical Treatise on the Affections of the Spine' may be recommended to the attentive perusal of those entrusted with the care of young persons. We have reason to know that extension by the use of Mr. Tuson's couch and its attendant exercises, has been very successfully applied to many of his private patients; and in affording our testimony to the professional merits of this gentleman, we confer a benefit on the public."—*Church Magazine*.

"We are bound to acknowledge that Mr. Tuson has combated two great errors,—the obstinate adherence to tight lacing, and the absurd notion of the applicability of any one plan of treatment for all cases indiscriminately; and also that he makes frequent reference to the physiological causes of the malady."—*Athenæum*.

"Mr. Tuson has, with great talent, exposed the follies of parents, pointed out in a most scientific manner the causes of the derangement of structure, and has, in clear language, told us his plan of cure. It is simple, and admirably adapted to the cases of which he speaks."—*Statesman*.

THE MODERN TREATMENT of SYPHILITIC DISEASES, both PRIMARY and SECONDARY; comprising an Account of the improved Modes of Practice adopted in the British and Foreign Hospitals, with the new Remedies and numerous Formulæ for their Preparation and Mode of Administration. By LANGSTON PARKER, Lecturer on Anatomy and Physiology in the Birmingham Royal School of Medicine. 12mo., cloth, price 5s.

"An excellent little work. Such a digest cannot fail to be highly useful and valuable to the practitioner. Information is given in a trustworthy form, which could not be collected without the expenditure of much time and labour."—*Dublin Medical Press*.

"Judicious and well-timed."—*London Medical Gazette*.

"It abounds in interesting and useful information."—*Lancet*.

"This manual will, we doubt not, be extensively read. We recommend our readers to procure the book; its perusal will afford much information."—*Dublin Journal*.

"For the details of modern practice this work is a useful guide; it contains numerous formulæ for the new combinations of mercury and iodine, and other recently introduced remedies. Valuable practical hints may be gathered from it in the expediency of the mercurial treatment."—*British and Foreign Medical Review*.

Just published, the Second Edition, considerably enlarged, with numerous Figures on Steel and Wood, 8vo., cloth, 18s.,

PRINCIPLES of GENERAL and COMPARATIVE PHYSIOLOGY, intended as an Introduction to the Study of Human Physiology, and as a Guide to the Philosophical Pursuit of Natural History. By W. B. CARPENTER, M.D., Lecturer on Physiology to the Bristol Medical School.

"The high character of the first edition of this work was universally acknowledged by all the professional critics of this country; it was warmly eulogised by other physiological writers, and was quoted as a safe and very useful guide for students by physiological lecturers of established judgment. The present edition offers still stronger claims to favourable notice than its predecessor, for it brings us quite up to the physiological knowledge of the day, by many important additions. Without, indeed, any exaggerated compliment to Dr. Carpenter, we must say that we know of no author of modern date who excels him in clearness of description, and a general happiness of style."—*Medical Gazette*, Oct. 22, 1841.

DR. JACOBI on the CONSTRUCTION and MANAGEMENT of HOSPITALS for the insane; translated from the German. With Introductory Observations by SAMUEL TUKE. 8vo. cloth, with Plates, price 9s.

"We have just received, with very great pleasure, a translation of Dr. Maximilian Jacobi's work, and we desire to recommend it strongly to our readers. The whole work is composed with a rare practical knowledge of the subject, which has seldom marked the recent publications of the same class. The observations, both of the author and of Mr. Tuke are such as may suggest improvements in every institution for lunatics in the country."—*Medical Gazette*, August, 1841.

Just Published, Dec. 1, 1841, No. VI. of the
PHARMACEUTICAL TRANSACTIONS. Price 1s. Edited by JACOB BELL, containing:—Pharmacy in Norway; Pharmaceutical Meeting; Description of the Diploma, &c., &c.

London: Published by J. CHURCHILL, Princes-street, Leicester-square; Sherwood and Co., 23, Paternoster-row; and S. Highley, 32, Fleet-street. Maclachlan and Stewart, Edinburgh; and Fannin and Co., Dublin.

R UPTURES.—THE PATENT SELF-ADJUSTING GERMAN TRUSS, acting effectually without any complications, is recommended by the Faculty for the CURE and RELIEF of HERNIA. The most eminent members of the profession are of opinion that the necessary quality of a good Truss is an efficient resisting power, without unnecessary pressure on the part affected, which desirable object is alone obtained in a Truss unencumbered with straps, spiral springs, or pad behind.

J. Egg and Co., the inventors, engage to secure any reducible Rupture if left to their management.—Manufactory, No. 1, Piccadilly.

TO THE MEDICAL PROFESSION.

On the 1st of December will be published, price 1s. 6d., No. XII. of the

LONDON AND EDINBURGH MONTHLY JOURNAL OF MEDICAL SCIENCE (with two Plates), Edited by Dr. COMMAK. This Number completes the Volume for 1841, and contains a copious Index. On the 1st of January, 1842, No. I. of the Second Series will appear. The Profession are respectfully reminded that this is the cheapest and most comprehensive Medical Journal published in Great Britain. A few complete sets of the year 1841 may still be had from the Publishers.

This Journal is an excellent and economical medium for Advertisements.

London: H. Bailliere, 219, Regent-street, Edinburgh: Maclachlan, Stewart, and Co. Dublin: Curry and Co. Paris: J. B. Bailliere, Rue de l'Ecole de Medicine. And Sold by all Booksellers in Town and Country.

A TREATISE on the NATURE, CAUSES, and TREATMENT of ERYSIPELAS. By THOMAS NUNNELEY, Lecturer on Anatomy, Physiology, and Pathology, in the Leeds School of Medicine. 8vo., cloth, price 10s. 6d.

"We consider that Mr. Nunneley has done good service to the profession by the production of this work."—*Provincial Medical Journal.*

London: John Churchill, Princes-street, Soho.

MR. LANE, MEDICAL AGENT, 18, John-street, Adelphi, has numerous Businesses for disposal of various descriptions, for Physicians and General Practitioners; also many Retail Concerns with and without Practices. He begs to direct attention to two Physicians' Practices in the Country, of moderate amount, but highly respectable. There are on his list some highly eligible Provincial Practices, from £150 to £1200; two especially, the purchase of each would require about £1000; the advantages of these are peculiar, and thorough introductions could be given. There is a mixed Business in the northern suburb of London, which can be confidently recommended, and is only relinquished on account of ill health.

Assistants of every grade gratuitously engaged for Country Practitioners, with strict regard to character and qualifications; such and terms being specified.

Personal attendance Twelve to Four.—Letters prepaid.

Just Published, 8vo, Price 7s. 6d.,

THE NATURAL ORDER OF DISEASES; being an Easy Exposition of the True Principles of Medical Practice, for the use of Students. By ROBERT STEVENS.

"A very useful work, and one which the student and young practitioner will doubtless greet with the approbation which the undertaking deserves."—*Lancet.*

J. Highley, 32, Fleet-street, London.

WEAK LEGS, KNEES, AND ANKLES.

S PARKS and Co. beg to announce their newly-invented Elastic Stockings, Knee-caps, Ankle-socks, Wrist-bands, Belts, Rolling Bandages, &c., which they have now brought to the greatest perfection, for the cure and support of Varicose and Enlarged Veins; weak, swollen, rheumatic, and gouty affections of the Legs, Knees, Ankles, Wrists, &c., or in any part where, from weakness in the part, support may be necessary. They are strongly recommended by the most eminent of the Faculty for their elasticity, lightness, and cleanliness, being washable, and not producing that frequently injurious heat so much complained of in all other bandages.

S. and Co. also solicit particular attention to their improved Spring Crutches, Trusses, and every kind of instrument for the relief and cure of Weakness and Deformity in the Human Frame.

Printed particulars will be forwarded for taking measures, &c., by application (post paid) at No. 28, Conduit-street, London.

The above Bandages are entirely free from brass wires, or any other metallic substance, and are warranted to retain their original elasticity.

Agents for the New Patent Trusses without Springs round the Body.

O XIDE OF SILVER.—G. LEWIS, OPERATIVE DISPENSING CHEMIST, 33, Leicester-square, begs to inform the Profession that he alone prepares the above valuable Medicine according to Mr. Lewis's Formulæ. In consequence of the increasing demand, and to render it more generally available, G. L. has made a considerable reduction in price. A supply, with full particulars and directions for its employment, may be obtained by post direct from G. Lewis, or through the medium of any Wholesale Druggist.

The genuine Preparation has the written Signature of "Geo. Lewis" on the Label.

TO CHEMISTS, DRUGGISTS, AND TOBACCONISTS.

F. HALE, MEDICAL LABELLER, Writer on Glass, Manufacturer of and Dealer in Medical Glass, Drawers, Fixtures, and every requisite article for the above Shops, &c., begs leave most respectfully to invite the attention of the Medical Profession and Persons in the above businesses to his Depot, 2, Little Queen-street, Holborn, where an elegant diversity of Devices of every description may be seen; Publicans' Liquor Bottles splendidly labelled and emblazoned. Tobacco and Snuff Jars, Show Bottles, &c., in great variety.

Shop Fixtures bought, sold, or taken in exchange for new.

Estimates given for the whole or part of Shops, if required.

F. H. is likewise Valuer and Agent for the Disposal of Businesses.

Letters by post immediately attended to. Terms most moderate.

Surgeons and Chemists supplied with Assistants, and Assistants with Situations.

TO PROFESSIONAL GENTLEMEN, INVALIDS, AND OTHERS.

THE RESPIRATOR; OR, SAFEGUARD FOR THE LUNGS.

The Manager for the Sale of the RESPIRATOR, in the United Kingdom, the Continent, and America, respectfully requests the attention of Professional Gentlemen, and others, to the following observations in connection with that important Instrument.

It has been the wish of Mr. Jeffreys, from his profession and habits, to place the disposal of the RESPIRATOR in the hands of a Commercial Manager, which has become the more necessary by the extension of the business.

The RESPIRATOR is now entirely hidden from view by a fabric made for the purpose, which on the face gives it the appearance of a shawl handkerchief. The instrument itself is composed of from twelve to twenty-four layers of very fine metallic wires soldered down to half that number of slight frames of metal. The whole work is very elaborate and delicate. The action is as follows. In breathing out, the impure air meets with no obstruction, and is all freely voided; but the warmth of the breath is retained by the numerous layers of wires. This pure warmth is delivered to the fresh air next drawn in, and raises its temperature to any amount desired, according to the number of layers employed, and distance between the wires. Thus the RESPIRATORS of low, medium, and high temperature, correspond respectively with the climates of the south of France, Madeira, and the West Indies; that is, they will be found to raise the average winter air of England to the average winter air of those climates.

The RESPIRATOR is of two kinds, the oral, and the orinasal. The former covers the mouth only, and is, therefore, more comely in its appearance than the latter, which includes the nostrils also. The oral answers equally well with the orinasal, when the wearer has accustomed himself to breathe through the mouth only, and not through the nostrils: as the mouth does not dry with the RESPIRATOR on, and as it becomes the channel of comfort, the habit of respiring through it entirely is easily acquired by a little practice; while the orinasal RESPIRATOR is an efficient resource for those who desire to respire through both channels. It is particularly adapted for use in bed, when the appearance is of no moment; and it must be considered a far preferable means of allaying night-cough, to the common habit of taking into the stomach deleterious compounds prepared by unauthorised empirics.

Some unreflecting persons have supposed that the use of the RESPIRATOR would increase their delicacy; these and many other instances prove the contrary to be the case, especially when the RESPIRATOR is properly selected. Every reflecting physician must perceive that, by giving the lungs time to recover their vigour, and by the beneficial effects to the whole system, of fresh air and exercise, a susceptibility to cold, instead of being increased, must be greatly diminished; and, in fact, that the RESPIRATOR can render a person no more delicate than respiring the air of a properly warmed room.

Medical Testimonials.

"It is unnecessary for us to speak in favour of this ingenious and invaluable instrument. The experience of the profession has established its eminent utility as a preventive, if not also as a curative means. But we are anxious to introduce to our readers some modifications which its able inventor, Mr. Jeffreys, has made in it. The large sale and improvements in the manufacture have enabled him to construct a cheap, yet most efficient instrument for the poor. The mechanic or the labourer may now obtain one for the low sum of seven shillings, while for females the price is only six shillings. This is an inestimable boon to the less affluent classes. It is unnecessary to point out the benefits that must accrue to many a family, from the head of it being enabled to pursue the occupation on which his and their subsistence depends. In conclusion, we would entreat our professional friends to avail themselves of this admirable adjuvant to their previous stock of remedies."—*Medico-Chirurgical Review*, July, 1840.

"An examination and trial of the Respirator will fully satisfy any person that the object of Mr. Jeffreys, in its manufacture, has been effectually accomplished. It is most ingenious in design, and singularly neat in construction."—*Lancet*, January 21, 1837.

"I do not think I can insist too much on the incalculable advantages of this discovery, for before its invention the Medical Practitioner was being constantly placed in the dilemma of either aggravating pulmonary disease, by exposure of the patient to vicissitudes of temperature, or else of inducing indigestion and low spirits, by confinement to the house; this deprivation of the digestive organs often reacting upon and increasing the original disease of the chest."—*Dr. Malden's Address*.—Meeting of the Provincial Medical Association, held at Bath, in 1839.

LIST OF PRICES.

ORAL RESPIRATOR, of medium power, for the mouth only.

	<i>Gent's.</i>	<i>Ladies'.</i>	<i>Children's.</i>
I. Quality of gold wire throughout, complete. The quality will bear refitting frequently	50s.	42s.	32s.
