

Foolscap 8vo, cloth, lettered, price 10s 6d,

**Dr. HOOPER'S PHYSICIAN'S VADE MECUM.** New Edition, entirely re-written, enlarged, and greatly improved. By W. A. Guy, M.B., Physician to King's College Hospital.

EXTRACT FROM EDITOR'S PREFACE.

The present edition consists of two parts, corresponding to what is commonly understood by the terms general and special pathology and therapeutics.

The first part consists of six chapters. The first chapter is merely introductory, and contains a scheme of medical study which, it is hoped, may prove useful to the pupil at his first entrance upon his studies. The second chapter contains some useful directions for the taking of cases. The third chapter, headed "Health and Disease," consists chiefly of definitions and explanations of terms. An outline of Physiology and General Pathology forms the subject of the fourth chapter, in which an attempt is made to bring together some of those facts and theories which admit, either directly or indirectly, of practical application. Those functions of the body which attract most attention at the bedside, and those methods of examination which are of most constant application, form the subjects of the fifth chapter. They are the examination of the blood and urine, of the chest and abdomen, of the pulse and respiration. In this part of the work, the object of the editor has been to furnish the most exact information concerning the functions of the body in a state of health; and with this view he has embodied his own observations on the pulse, and introduced, under the head of the respiration, some facts at present new to the profession. The last chapter contains a brief outline of General Therapeutics, with the addition of tables of the doses of the more important remedies, the proportion of the more active ingredients contained in the preparations of the pharmacopoeia, and of the doses proper for each age.

Throughout this first part, the editor's object has been to make the work useful as a book of reference at the bedside; at the same time that he has endeavoured so to connect its several parts together as to offer some inducement to the reader to study it as a whole.

In the second part, very extensive alterations have been made. Cullen's nosology has been laid aside, and an arrangement has been adopted which brings together the diseases which affect the same organs, or are otherwise nearly allied to each other. No attempt has been made to form a nosological system, but the diseases are, for the sake of convenience, thrown together in separate chapters.

Many liberties have been taken with the text. The prescriptions had been thrown together at the end, and carefully arranged under distinct heads, instead of being scattered through the body of the work; the original text and the emendations made in the later editions, have been fused together and blended with the additions made by the editor; many parts of the work have been so much shortened as to admit of the introduction of a great number of diseases not described in former editions; many others which were only incidentally mentioned, are treated under separate heads; and a still greater number have been so much altered as to be nearly new.

Among the additions to the work may be mentioned, general observations on continued fever, puerperal fevers, plague, muscular rheumatism, neuralgia, cephalalgia; and among the diseases which have undergone the greatest alteration, infantile fever, diarrhoea, hydrophobia, laryngitis, asthma, phthisis, diabetes.

Some portions of the work on which the late editor had bestowed much labour, as the diseases of the heart and those of the skin, have been left nearly in the state in which the present editor found them; but even here the same liberty has been used of curtailing anything which appeared unnecessary, and adding in what appeared wanting. Original observations of practical remarks, embodying the results of the editor's own experience, are distinguished by the initial G. A copious index, prepared with much care, completes the volume.

Henry Renshaw, 356, Strand; Simpkin, Marshall, and Co.; Whittaker and Co.; Sherwood and Co.; S. Highley; J. Churchill; Tilt and Bogue; Houlston and Stoneman; and T. Hill. Edinburgh: A. and C. Black.

In Foolscap 8vo, price 10s 6d, cloth, lettered,

**The SURGEON'S VADE MECUM.** By ROBERT DRUITT. Second Edition. Illustrated with 50 Wood Engravings.

"If we know anything of the wants and tastes of students, this Vade Mecum will take. It gives them what they need, concise descriptions and accurate directions. Such a book was a desideratum; and, if we are not mistaken, Mr. Drutt has made a hit."—*Johnson's Journal*.

"The author shows himself well acquainted with the most approved views both of pathology and practice, and the general arrangement of the subjects; and the style in which the information is conveyed is particularly good. \* \* \* The work is very creditable to the author, and we recommend it to the advanced pupil and to the young surgeon as a useful index to the great book of surgical knowledge."—*Forbes's Review*.

"It is an excellent epitome of surgery, and may be consulted with advantage by all ranks of the profession."—*Provincial Medical Journal*.

"This work merits our warmest commendations, and we strongly recommend it to surgeons as an admirable digest of the principles and practice of modern surgery."—*Medical Gazette*.

"The Surgeon's Vade Mecum is an exceedingly valuable companion to the student or to the practitioner; it contains a store of valuable information upon an important branch of medicine."—*Lancet*.

"An admirable guide to the student in surgery; the author has introduced a large proportion of sound scientific information on surgical pathology."—*Edinburgh Medical Journal*.

London: HENRY RENSHAW, 356, Strand; and JOHN CHURCHILL, Princes-street, Soho.

NEW WORK ON MIDWIFERY,

Illustrated by upwards of 100 fine Wood Engravings. In Foolscep 8vo, cloth extra, price 12s 6d,

**The THEORY and PRACTICE of MIDWIFERY. By FLEETWOOD CHURCHILL, M.D.**

This Treatise includes the most recent observations on the Anatomy and Physiology of the Organs of Generation, Menstruation, Conception, Ovology, Utero-gestation, Signs of Pregnancy, Duration of Pregnancy, Gestation, Sterility, Super Fætation, Extra Uterine Fætation, Fætal Pathology, Abortion, and on Parturition, with its Abnormal Variations; illustrated by extensive Statistics, and by upwards of One Hundred highly-finished Wood Engravings by BAGG.

AUTHOR'S PREFACE.

The object of the publishers of this volume was to offer to the student in midwifery a work, embracing the modern discoveries in the physiology of the uterine system, with all the recent improvements in practice, in a condensed form, amply illustrated, and at a moderate price.

At their request I undertook the literary department, and I must confess with diffidence, after the excellent treatises of Drs. F. Ramsbotham and Rigby. I have, however, entered more fully into the physiology of the system than they have thought necessary; nor have I hesitated to avail myself of their labours, and those of other distinguished authors, so as to render the theory and practice as complete as possible.

I regret very much that it was incompatible with the size of the volume to admit ample references; however, after the avowal I have just made, it will be understood that their omission has resulted neither from a wish to claim the merit of originality, nor from a desire to save myself trouble. I can truly say that I have examined every author of eminence within my reach, in the course of composition of the work, and have done my utmost to lay before the student a condensed and yet extensive statement of the present state of the science.

Perhaps I ought to say a word as to the elaborate statistics I have given. I would not overrate their value; at the utmost they only afford an approximative estimate, owing to the drawbacks upon their exactness, and could not alone furnish us with accurate conclusions; nevertheless, their value is considerable, as showing the relative mortality of the deviations from natural labour, and of the different operations. Whatever value they do possess it is evident will be in proportion to their extent and accuracy; and to secure both these points, I have examined the various reports myself, and obtained access to some but little known in this country, forming altogether a very large number.

For the very beautiful illustrations, the work is indebted to the talent and good taste of Mr. W. Bagg, and it will be admitted, I am sure, that they add considerably to the value of the work.

London: HENRY RENSHAW, 356, Strand. Dublin: FANNIN and CO., Grafton-street.

ACTON ON VENEREAL DISEASES.

Illustrated by a Quarto Atlas of Coloured Plates, 8vo, cloth, price £1 11s 6d,

**A COMPLETE PRACTICAL TREATISE on VENEREAL DISEASES**, and their Immediate and Remote Consequences; including Observations on certain Affections of the Uterus, attended with Discharges. By WILLIAM ACTON, late Externe of the Female Venereal Hospital, Paris.

\* \* \* The Letter-press, illustrated with Woodcuts by BAGG, forms a closely-printed Volume of 450 pages. No expense has been spared in the execution of the Coloured Plates. The Original Drawings were made expressly for this work, with the sanction of M. RICORD, by first-rate Artists, from the most remarkable cases observed in that professor's Clinique during the years 1836—1840.

"We recommend this work to the attention of our readers as deserving of perusal."—*Lancet*.

"The work abounds with practical views, which are novel to the English reader; and the various subjects are treated in a very methodical and complete manner."—*Provincial Medical Journal*.

"It presents a better idea of the pathology of this class of diseases than any other we have met with."—*Medical Gazette*.

"The author deserves credit for the manner in which he has executed his task."—*Johnson's Journal*.

"Mr. Acton's work contains the most valuable account extant in any language of Ricord's views regarding the pathology and treatment of syphilis."—*Edinburgh Journal of Medical Science*.

"It possesses considerable merit, and we can safely recommend it to the perusal of our readers."—*Dublin Medical Press*.

"The descriptions of the disease in the female are peculiarly valuable. The plates are first-rate."—*Dublin Medical Journal*.

London: HENRY RENSHAW, 356, Strand.

SPILLAN'S TRANSLATION OF ANDRAL.

In 1 Vol. 8vo, price 25s, cloth,

**The CLINIQUE MEDICALE; OR, REPORTS OF MEDICAL CASES.**  
By G. ANDRAL. Translated, with copious Notes, by D. SPILLAN, M.D.

"We earnestly recommend all our young friends who wish to know what is most excellent in the modern pathology of France to lose no time in adding this translation to their stock of medical authorities."—*Forbes's Review*, No. 1.

"The present translation of Andral's valuable volumes is likely to prove useful to practitioners in this country. We recommend Dr. Spillan's translation to the attention of our readers."—*Johnson's Journal*, No. 49.

London: HENRY RENSHAW, 356, Strand.

**NEW EDITION OF PEREIRA'S MATERIA MEDICA.**

Published this day, in 2 very thick vols. 8vo, of 2,000 pages, with nearly 400 Woodcuts, 50s, cloth lettered,

**THE ELEMENTS of MATERIA MEDICA and THERAPEUTICS.** By JONATHAN PEREIRA, M.D., F.R.S., and L.S., Licentiate of the Royal College of Physicians, Member of the Royal College of Surgeons, Examiner in Materia Medica and Pharmacy to the University of London, Assistant Physician to, and Lecturer on Materia Medica at, the London Hospital, &c. &c. Second Edition, enlarged and improved.

London: Longman, Brown, Green, and Longmans.

**LECTURES on the MORBID ANATOMY of the SEROUS MEMBRANES.**  
By T. HODGKIN, M.D.

Vol. I. On the SEROUS MEMBRANES. 8vo, 10s 6d, cloth.

This Volume contains the Author's investigations respecting Cancer, Fungoid Disease, Melanosis, &c., and, as appended subjects, Parasitical Animals, and the Pathological Indications afforded by Colour.

Vol. II., Part I. On the MUCOUS MEMBRANES. 8vo, 12s, cloth.

This Volume, which treats of the Gastro-pulmonary System, as far as the termination of the small intestine, comprises the subjects of Pneumonia, Phthisis, Gastro-enteritis, the Affection Typhoide of Louis, and Fever.

London: Simpkin, Marshall, and Co.

**LAENNEC ON THE CHEST.**

8vo, price 18s,

**A TREATISE on the DISEASES of the CHEST, and on MEDIATE AUSCULTATION.** By R. T. H. LAENNEC, M.D. Translated, with copious Notes, by JOHN FORBES, M.D., F.R.S. Fourth Edition, considerably enlarged and improved, with many additional Notes.

London: Henry Renshaw, 356, Strand; Longman and Co.; Whittaker and Co.; and Simpkin and Co.

8vo, cloth, price 12s,

**A TREATISE on the VENEREAL DISEASE and its VARIETIES.** By WILLIAM WALLACE, M.R.I.A. New Edition, with Plates.

"The practical surgeon may study this volume with much advantage."—*Forbes's Review*.

London: Henry Renshaw, 356, Strand.

**MEDICAL RECORD, price 8d.,**

Published the commencement of every Month. No. 4, for April.—"Sir James Graham's Bill of Medical Reform"—Alarming Critical State of the Medical Profession—Astonishing Apathy of its Members—Taciturnity of the Medical Journalists—Treachery of Parties—Character and Conduct of the British Medical Association—The Scandalous Anatomy Act, and Reprehensible Conduct of Ministers—Alderman Copeland and the Anatomy Act—All the Medical Information of the past Month, gleaned from all other Journals, British and Foreign.

Every Medical Man should read "The Record" to know his own position, and the researches in Medical Science.—Much larger and closer printed than any of the weekly Medical Periodicals.

Steill, 20, Paternoster-row; and to be had of all Booksellers and Newsvenders.

Foolslop 8vo, cloth, price 7s,

**SIR ASTLEY COOPER'S LECTURES on the PRINCIPLES and PRACTICE of Surgery.** New Edition.

"The practical hints and cautions to be found in these discourses will be valued so long as surgery shall be cultivated as a science."—*Lancet*.

London: Henry Renshaw, 356, Strand.

**WANTED, by a Medical Man in extensive Practice, a VISITING ASSISTANT, willing to aid occasionally in Dispensing.** Any one of steady habits, with zeal and energy, not very young, and wishing for a comfortable situation, may apply to A. B., Surgeon, &c., Hitchin, Herts.

**MR. LANE, MEDICAL AGENT,**

13, JOHN-STREET, ADELPHI, begs to draw the attention of Physicians, Surgeons, and Druggists, to the List of Businesses that he has for Disposal. Among numerous others suitable to General Practitioners, are several in the Midland and most populous Counties, the receipts of which are from £600 to £1,000 per annum. There are two Partnerships in excellent provincial practices, the purchase of which would each require £1,000. Minor concerns of various amounts in different neighbourhoods, some of which offer advantageous opportunities of commencing Practice at a very trivial expense.

Chemists' and Druggists' Businesses, of various amounts, both in town and country, are on MR. LANE'S books for disposal. Among them may be noticed an old established business, in one of the best thoroughfares in town, requiring about £1,200; a capital and bona fide concern at a much frequented water-place—purchase money, £1,500. There are numerous others, with or without Practice, variously situated.

Gentlemen desirous of entering into business, applying to MR. LANE, may depend on his best endeavours for the fulfilment of their wishes, and assiduous attention to their interests.

MR. LANE continues to supply Assistants with situations who can be well recommended.

Office hours, 12 to 4.—Letters free.

**CITRATE OF IRON.**

MR. BULLOCK has much pleasure in stating that, although scarcely three months have elapsed since he introduced this preparation to the Profession in England, the demand for it has become very extensive, more so, indeed, than he could have anticipated. From very numerous and independent sources he has received the satisfactory testimony of its efficacy in all the diversities of cases where Iron is employed as a remedy. It has the important properties of being perfectly soluble, tasteless, and compatible with those agents commonly associated with Iron, and which are inadmissible with most other of its salts. In the cases of children and young ladies, combined with sugar or weak wine, and indeed in all cases where it is desirable to persevere in the administration of this metal for any length of time, the Citrate will be found by far the best form; it never disagrees with the stomach, and the dose is small (ex. grat.), gr. v. to x. three times a day.

Prepared by BULLOCK, Operative Chemist, 22, Conduit-street, Hanover-square, several years occupied in the Laboratories of the most distinguished Chemists of France and Germany.
