WITH SUPPLEMENT.

No. 3360.

SATURDAY, MAY 23, 1925.

Price 1/3

Owing to the Whitsun Holiday, all communications and advertisements intended for insertion in our issue dated MAY 30th, should be received not later than MONDAY morning, May 25th.

## INTERNAL SECRETION PRODUCTS

*The importance of proper manufacturing methods.*

The manufacturing processes used for organotherapeutic products practically date from 1889, in which year Brown-Sequard brought the attention of the entire medical world to those principles of this form of therapy which ever since played such an important part in medicine.

For many years these products were made in the private laboratories of physicians by methods which, although crude, were so carefully conducted as to give reliable and potent substances. The best results of the early days were accomplished with such products. The early methods of large-scale commercial

production were disappointing in their results. Organotherapeutic products in which all potency had been lost by improper methods of manufacture appeared on the market, and the inevitable lack of results was reported from the physicians. Organotherapy suffered in the eyes of medical men.

The processes used by G. W. CARNRICK Co. have been developed in their own research laboratory. The physician has the assurance that every one of the Carnrick products is as active and potent as if specially made in a research laboratory for his individual use.

*A complete list of single gland products and combined gland formulæ will be sent to members of the Medical Profession on request.*
