Pituitrin—A Step Forward

INTRODUCED by Parke, Davis & Co. in 1908, Pituitrin has for over 18 years occupied a foremost place in medicine. Although attempts to isolate the active principle, or principles, of the pituitary gland have, as yet, been unsuccessful, Parke, Davis & Co. workers have recently succeeded in producing Pituitrin in a much higher degree of purity than was hitherto possible.

We believe that Pituitrin contains far less solids or protein than any other pituitary extract available. The consequent reduction in the amount of solids and the quantity of protein in each dose injected is important—not less so is the greater stability and uniformity of therapeutic action this improvement secures.

Supplied in ampoules of 0.5 c.c. or 1 c.c.

A booklet on Pituitrin will be sent on request.
