ENO'S "FRUIT SALT"

Radiological Enquiries into Purgatives.

THE recent experiments and observations by Professor Alessandrini of Rome have thrown much light on the action of the different groups of purgatives employed in medicine. He found that, whereas many of the most frequently employed vegetable laxatives invariably cause a retardation of one to two hours in emptying the stomach, and a further retardation in the small intestine, saline aperients in no way lessen or even modify the gastric tone and peristalsis, their principal action being

expended on the second portion of the colon. These facts seem to offer scientific explanation of the painlessness and absence of after-reaction which mark the use of ENO'S "Fruit Salt."

This well-known preparation owes its reputation almost as much to the care that has been spent on securing an ideal physical texture (with a view to uniform solubility and effect on the palate) as to its chemical purity and efficiency in action.

"The Panel Doctor's Pocket Book"

The important rules and regulations under the National Health Insurance Act, in so far as they affect the Medical Profession, are concisely summarised and explained in "The Panel Doctor's Pocket Book," which has been issued by the Proprietors of ENO'S "Fruit Salt." This addition to the series of Pocket Remembrancers will, it is thought, be found useful by every doctor engaged in insurance practice. It is bound in limp morocco and is easily carried in the waistcoat pocket. Messrs. J. C. Eno Ltd., will be pleased to send a copy to any Medical Men who so desire.
