IODOLYSIN.

Trade Mark

IN RHEUMATISM & RHEUMATOID ARTHRITIS

'Iodolysin' is a soluble compound of Thiosinamin and Iodine containing 43 per cent. Thiosinamin and 47 per cent. of Iodine. In Rheumatoid Arthritis and Arthritis Deformans the preparation has given very encouraging results.

"No Agent so Effective"

"A lady was sent to me several months ago suffering from advanced Rheumatoid Arthritis. Knee, wrist and ankle joints were all affected. In a word she was a complete cripple. After six weeks treatment she was able to walk well and movement was possible in all joints which formerly were in a state of ankylosis. In my own opinion there is no medicinal agent so effective in the treatment of Rheumatoid Arthritis as 'Iodolysin.'"

M.B.

Physicians are invited to write for further particulars and clinical trial samples.
