## Sanocrysin

THE NEW GOLD TREATMENT FOR TUBERCULOSIS

THE publication in the *British Medical Journal* and the *Lancet* of 24th July, 1926, of The Medical Research Council's second report on its clinical investigation of Sanocrysin in the treatment of Tuberculosis, enables us to announce that we have been appointed sole distributors of Sanocrysin for Great Britain, Ireland, and British Colonies outside of Europe.

In making this announcement we earnestly suggest that medical men who propose to use Sanocrysin should first make themselves thoroughly familiar with recent clinical literature upon the subject, and especially with the report of The Medical Research Council referred to above. Perusal of this report indicates, as was the case with "606," that without due regard to proper dosage, technique, etc., the use of Sanocrysin is attended by some risk of unpleasant results, and, as stated in the report, "extreme care in the use of Sanocrysin" is essential.

Further particulars will be forwarded on request.

Parke, Davis & Company, 54 Beak St., London, W.1
